

What does the click jQuery selector rule do?

Last Modified on 06/11/2026 10:02 am EDT

The click jQuery selector rule shows the pop up when the jQuery click selector is used, and a click event is shown. You can set it to show when a link or button is clicked. For buttons, you may want to use the class or id attributes to identify the button for this rule. You'll find the appropriate syntax for each below:

id selector syntax: #some_elements_id

class selector syntax: .some_elements_class

Notice the use of the "#" symbol and the "." period. This is how to target an "id" and "class" using jQuery selectors.

So, if you want to show the pop up only when a button identified by the container class is clicked...

```
<body style="background-color: white;">  
<div style="border-bottom: solid #EBE8E8 1px; height: 117px; background-color: #ccc; background: url('https://digioh.blob.core.windows.net/images/top-background_e_page.png') repeat;"></div>  
<div id="navigation_wrapper" class="container" style="margin-top: -113px; width: 960px; font-family: Arial, Helvetica, sans-serif;">  
  <div class="contact" style="float: right; margin: 0px 27px 0 0; color: #818181; font-size: 13px; line-height: 19px; font-weight: 500;">
```

This is the container class

...your rule would look like this:

Click jQuery The click jQuery selector rule shows the box when a click event takes place. You can set it to show when a link is clicked, or when a button is clicked. You can paste in a Custom CSS path on your website, our javascript can detect when it has been clicked and show a box. This is awesome for video boxes.

Or, if you want to show the pop up only on pages with the navigation_wrapper id...

```
<body style="background-color: white;">  
<div style="border-bottom: solid #EBE8E8 1px; height: 117px; background-color: #ccc; background: url('https://digioh.blob.core.windows.net/images/top-background_e_page.png') repeat;"></div>  
<div id="navigation_wrapper" class="container" style="margin-top: -113px; width: 960px; font-family: Arial, Helvetica, sans-serif;">  
  <div class="contact" style="float: right; margin: 0px 27px 0 0; color: #818181; font-size: 13px; line-height: 19px; font-weight: 500;">
```

This is the navigation_wrapper id

Easy Steps to Identify ID Selector Syntax (see video above)

1. Using Google Chrome browser, open a page with a button you want to launch a pop up
2. Right click on the button and select "Inspect"
3. In the area that appears, right-click the line highlighted in grey
4. Copy Selector
5. Paste into the input section of the Click jQuery Rule (within the Digioh interface).

(Digioh also now offers a way to [generate jQuery selectors quickly](#).)

Examples

This is a powerful rule that opens many possibilities. For example, when someone clicks a link or button, you can trigger a pop up instead of directing them to a new page. This eliminates load time and keeps people on your site. This also works great for YouTube videos. For example, you can show visitors a promotional video inside the pop up (while on your website), then display a form underneath it to capture their information.
