

How to Add Hidden Fields to Forms

Last Modified on 06/16/2026 11:58 am EDT

Adding hidden fields to your forms is a great way to pass attribution data or hidden events to an integration. With Digioh, you can quickly add hidden fields to any of your forms in the pop up editor. To create a hidden field in your forms, just follow these steps.

First, open the pop up containing your form in the design editor.

Go to the form tab, open the "Fields" dropdown menu, then select the custom field you wish to make hidden. Set the field type for this field as "hidden field," then turn on the Set Ghost Text or Default Value toggle and select Default Value and set the value for your hidden field in the textbox below.

The screenshot displays the Digioh design editor interface. At the top, there are navigation buttons: "Save Draft", "Save & Publish", and "Preview". Below these are navigation links: "< BACK", "Boxes", "Reporting", "A/B Testing", and "Integrations". The main content area is divided into two panels. The left panel, titled "Main Page", shows a sidebar with tabs for "Layout", "Form", "Buttons", "Text", "Images", and "HTML". The "Form" tab is selected, and within it, the "Fields" dropdown is open, showing "Form", "Fields", "Labels", and "Inputs". The "Fields" section is expanded to show configuration options for a custom field. The "FIELD VISIBILITY" toggle is set to "ON". The "Field Type" dropdown is set to "Hidden Field". The "Make Field Required" toggle is off. The "Set Ghost Text or Default Value" toggle is turned on, and the "Default Value" radio button is selected. A red arrow points to the "DEFAULT VALUE" input field. The right panel shows a preview of the form on a dark wood background. The form includes a "LOGO" placeholder, the text "Sign Up for Exclusive Offers and Updates", a subtext "We promise you will love it!", an input field for "Enter your email address", and a red "CONTINUE" button. The top right of the preview area shows a status bar with "OFF", a lock icon, and the text "287714: Multi-step Test: Main Page" with "Status: Not Published" and "No Conditions".

Repeat this process for any additional hidden fields you wish to create.

Once you publish your form, hidden field values will be passed along with the rest of the data submitted from this form.
