

How to Adjust "Z-Index" for Inline Forms

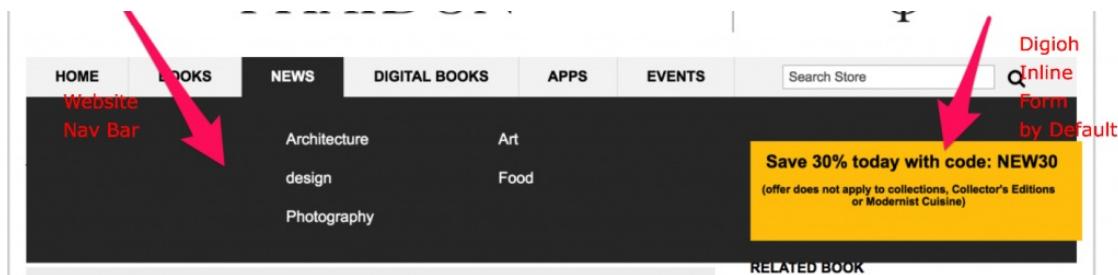

Last Modified on 06/24/2026 11:31 am EDT

What You'll Learn in This Article

- Steps to modify the z-index
- Control the stacking order of elements on a webpage

The z-index determines which element shows up on top if there are overlapping elements.

By default, inline forms are the highest z-index and will always show up on top. However, this can cause issues if your inline form is at the top of your page and your navigation bar has hover effects. Here is an example:

In the example bar, you don't want the inline form to show over the nav bar.

This is an easy fix!

Fix: Inside the editor, Navigate to Campaign settings

SaveFlowPublishPreview ▾

Main Page

Add Extra Page +

Box Settings

Widget

Widget Type

Lightbox ▾

Animation Effect

Fade ▾
open effect

Fade ▾
close effect

Animation Easing

Swing ▾

Swing ▾
close easing

Animation Speed

open speed

500

close speed

500

And then scroll to the bottom, There is a setting called Extra CSS Styles above the campaign metadata section. Just enter the z-index you want. In most cases this is the value you should add: **z-index: 0;**

Close Button Custom Image

-- NONE --

Add +

Close Button Positioning

Top Right

Close Button Offset

horizontal offset -18

vertical offset -18

Extra CSS Styles

z-index: 0;

Box Metadata

Key

Value

After adding that Extra CSS Style, the inline form displays under the main nav bar.
