

How to Display a Lightbox on Specific Pages

Last Modified on 06/11/2026 10:06 am EDT

Often, Digioh users don't want to show pop-ups on every page of their site. Or, they may want to target particular pages with different pop-ups. In any case, Digioh's conditions editor provides flexible options for targeting certain URLs with a lightbox or suppressing pop-ups on particular pages.

To display your lightbox on specific pages only, follow these steps.

1. Go to the "Conditions" section of the Design Editor.
2. Click "Add Conditions," then "Add New Rule."
3. From the dropdown menu, choose "Current Page URL."

4. Depending whether you want to display the lightbox on one or multiple pages, choose either "Contains" or "Contains Any of These." Alternately, to suppress pop-ups on certain URLs, you can use the negative (Does NOT...) operators.

Contains
Standard text operators
Contains
Starts with
Ends with
Equals
Negative operators
Does NOT contain
Does NOT start with
Does NOT end with
Does NOT equal
Multivalue operators
Contains any of these
Equals any of these
Does NOT contain any of these
Does NOT equal any of these

Multivalue operators
Contains any of these
Equals any of these
Does NOT contain any of these
Does NOT equal any of these

5. Add your desired page(s). Since it's not an exact match, you don't need to enter the entire URL.

Coupon Lightbox - Tea

Current Page URL ✕

The current page URL shows the lightbox to users who visit a specific page or a page with a URL containing specific terms on your site. For example if the rule you set is 'Current Page URL CONTAINS awesome-product', then all pages that have 'awesome-product' in the URL will show your lightbox.

Current Page URL Contains any of these

- my-awesome-product ✕
- my-amazing-product ✕
