How To Use Adobe Fonts In Digioh

Last Modified on 06/11/2026 10:06 am EDT

What you'll learn:

- How to add and apply Adobe fonts within the Digioh platform.
- Customize Adobe Font weights with CSS to achieve the desired visual impact.

Digioh allows you to add custom fonts to your campaigns, including fonts from Adobe Creative Cloud.

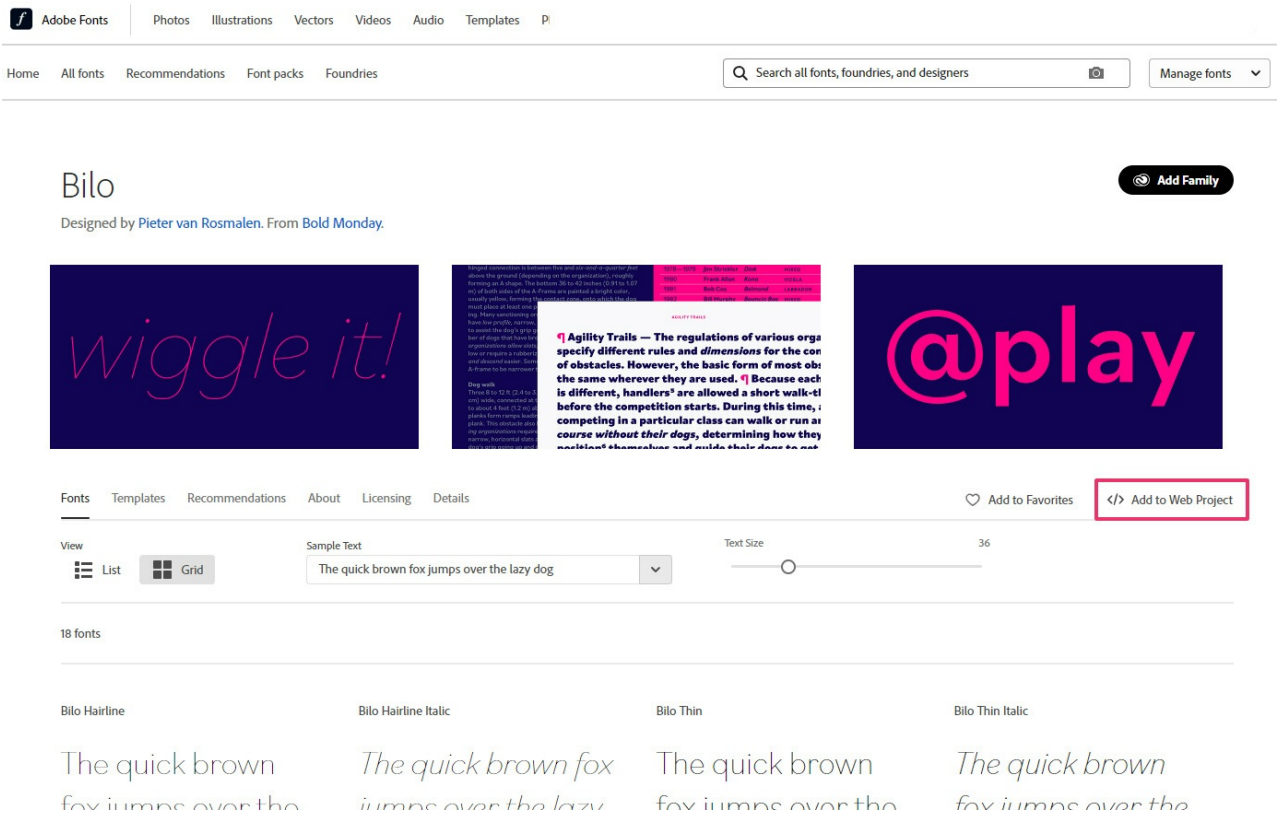

To use fonts from your Creative Cloud account in your Digioh pop-up forms and pop-ups, follow these instructions.

Step 1: Find Your Desired Adobe Font

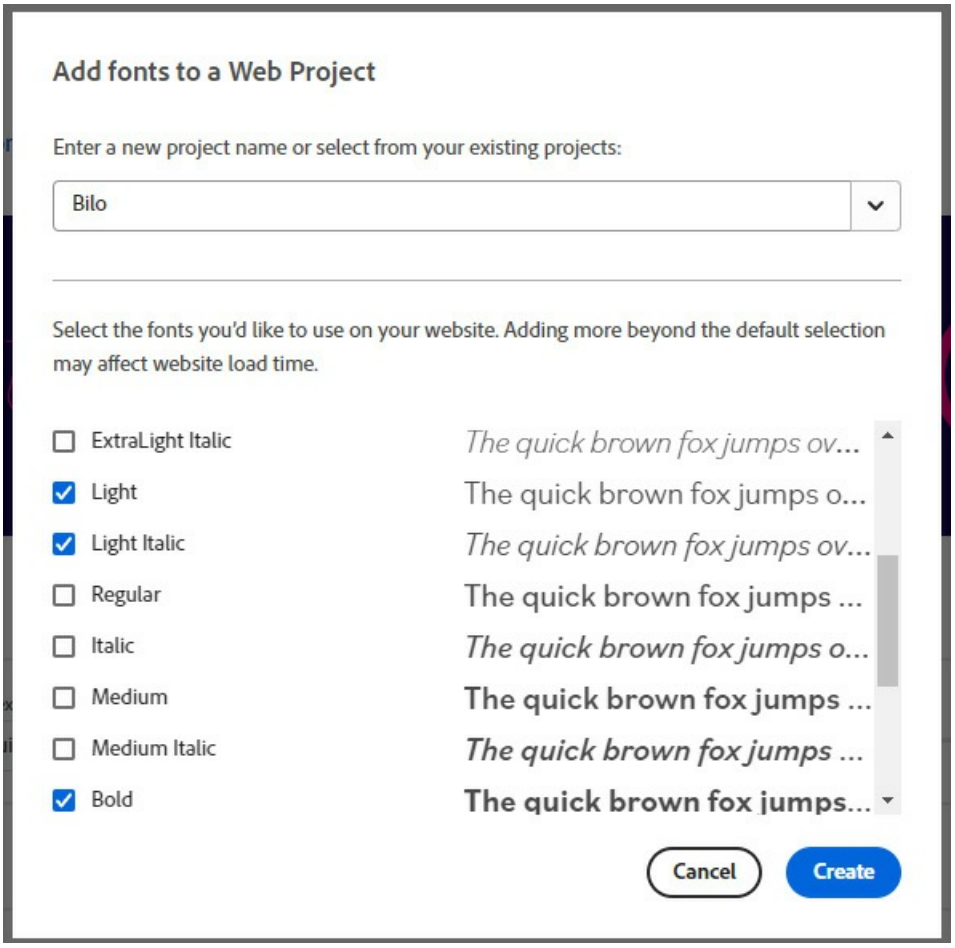

Head to the Adobe fonts page to find the font you want to use. *Due to licensing, Digioh cannot pull fonts from Adobe for you, so this will need to be done through your Adobe account.*

Step 2: Add Your Font to a Web Project

Click "Add to Web Project."

Select the versions of the font you'd like to use, such as Light, Medium, Bold, etc. Name your project. We recommend using the name of the font.

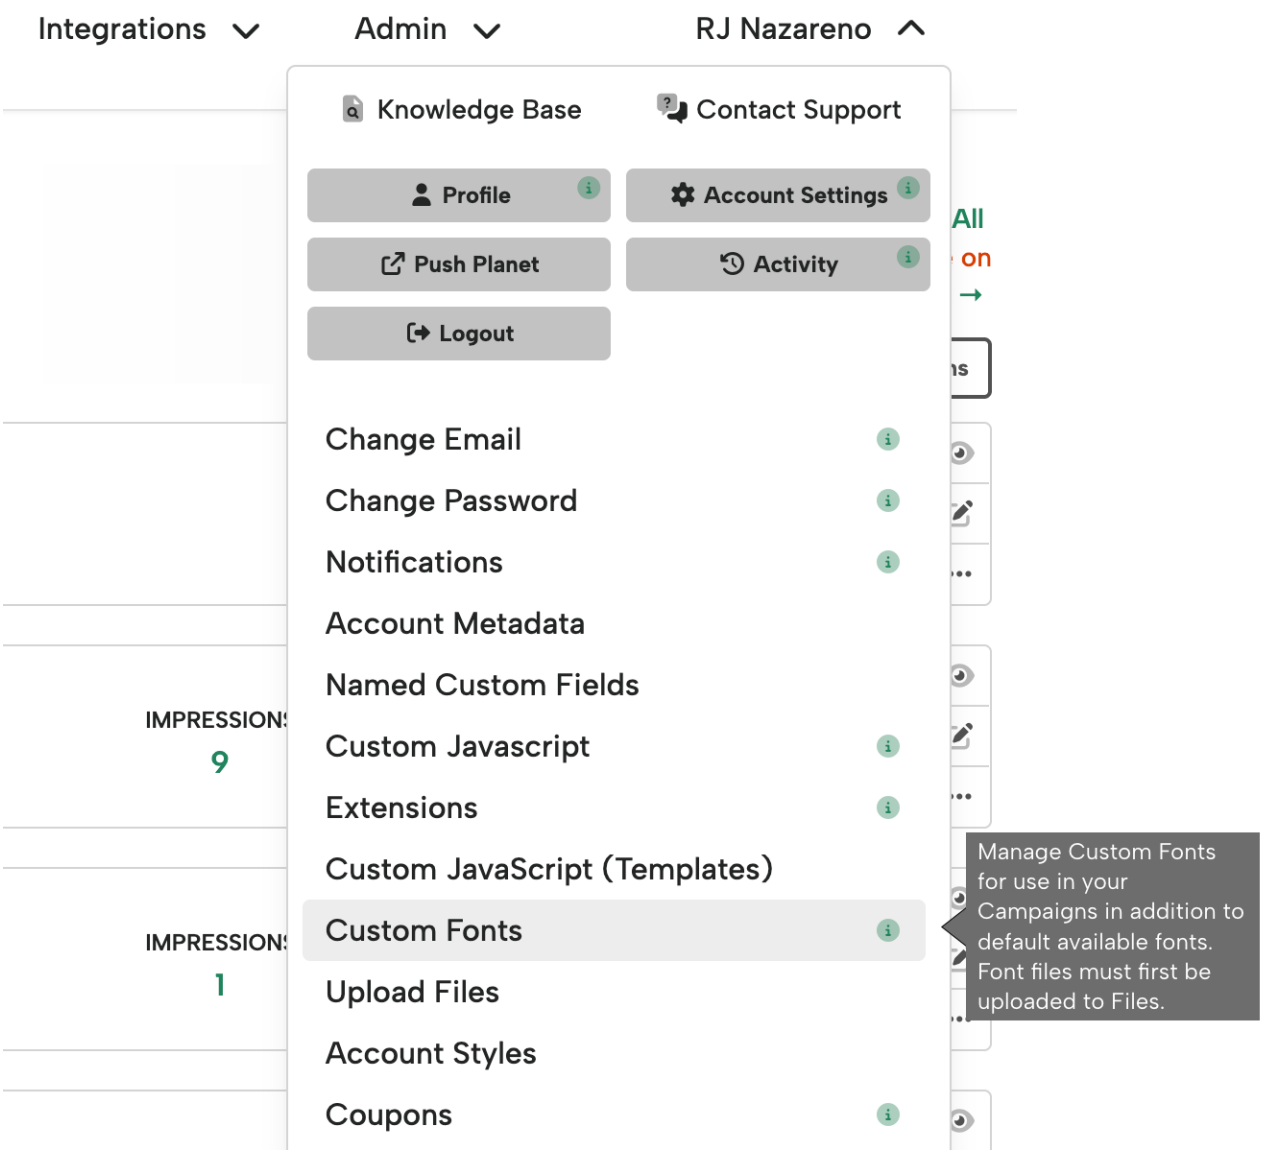

Step 3: Copy the URL

Copy *only* the URL from the embed code provided by Adobe. It will look something like this: https://use.typekit.net/nfe0kfq.css

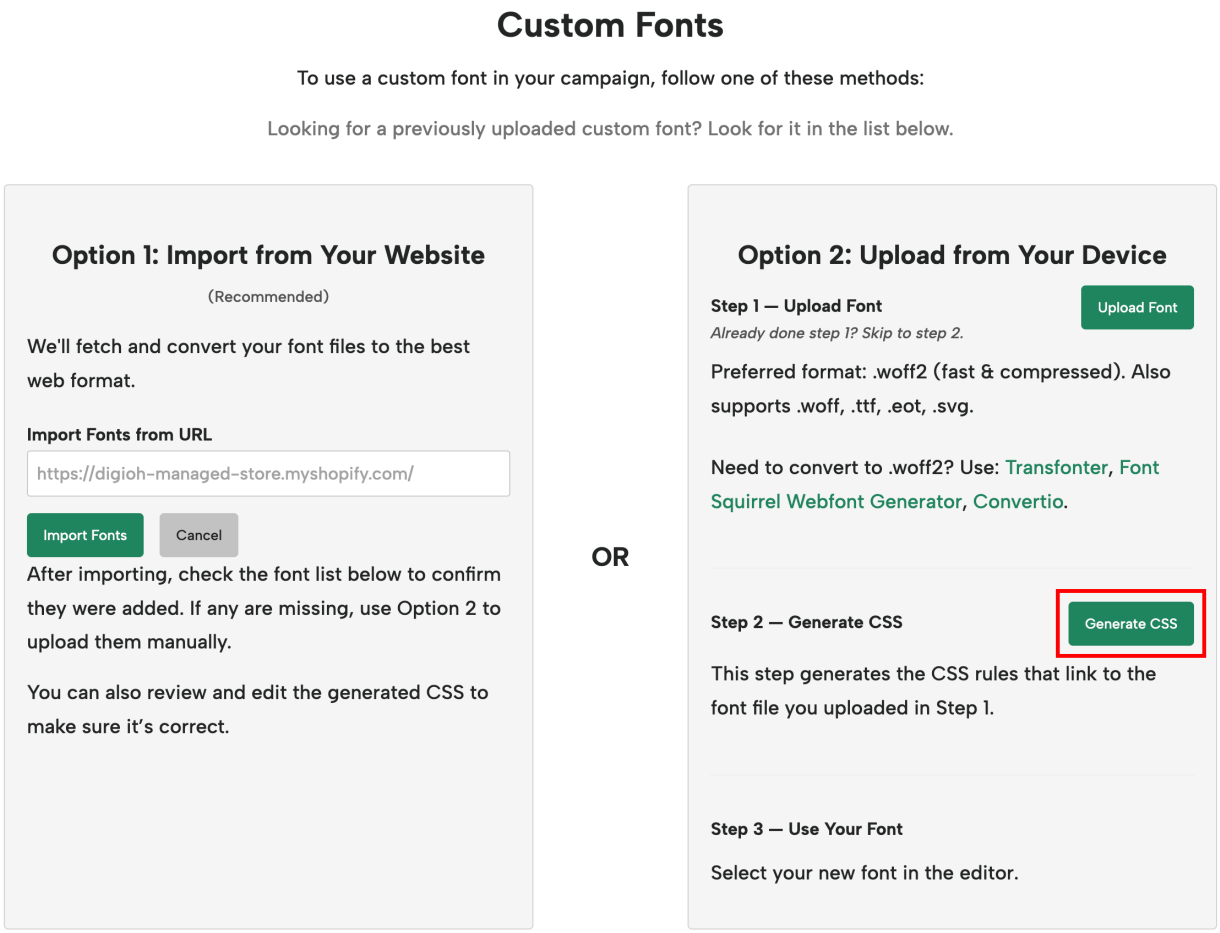

Step 4: Add New Font to Digioh

Open a new tab (while keeping your current Adobe tab open) and log into Digioh. Click the account name in the upper-right corner, and click Custom Fonts in the dropdown.

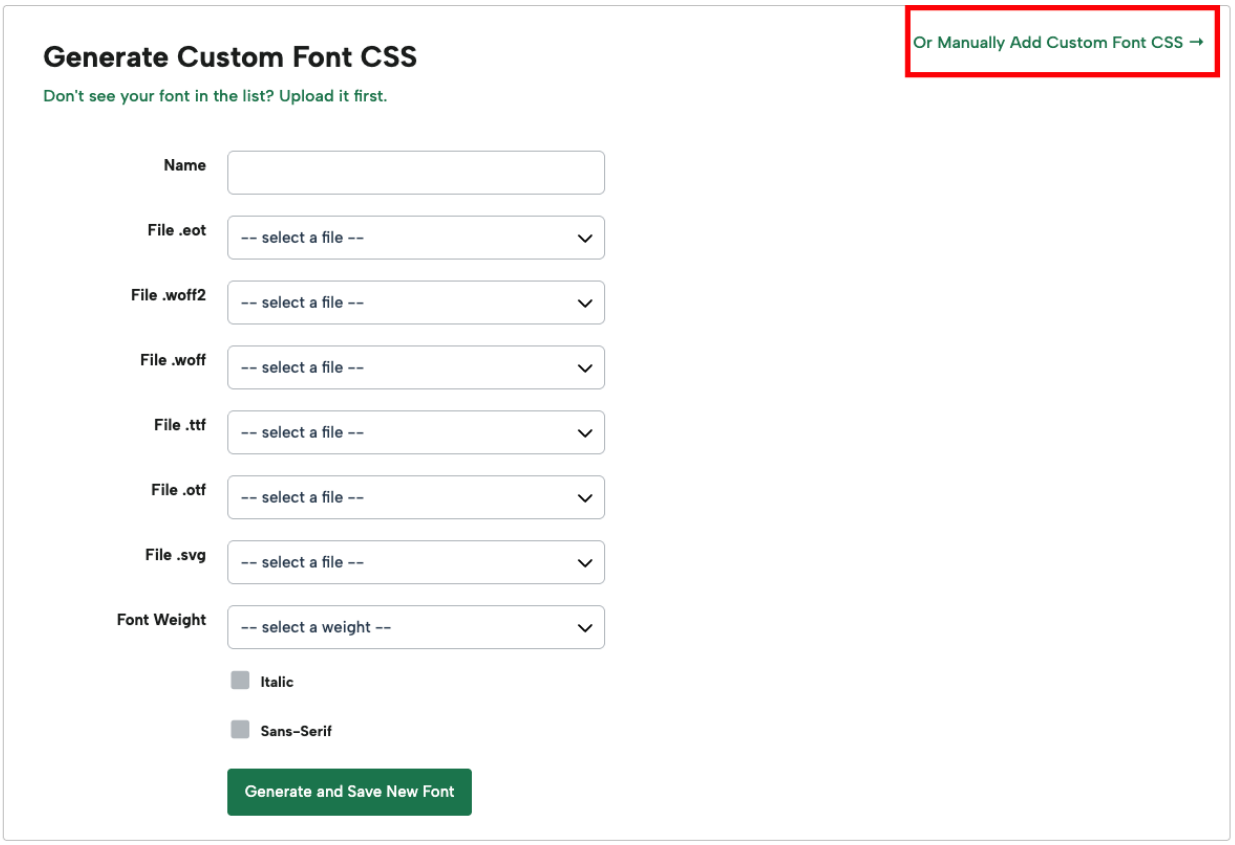

Click Generate CSS.

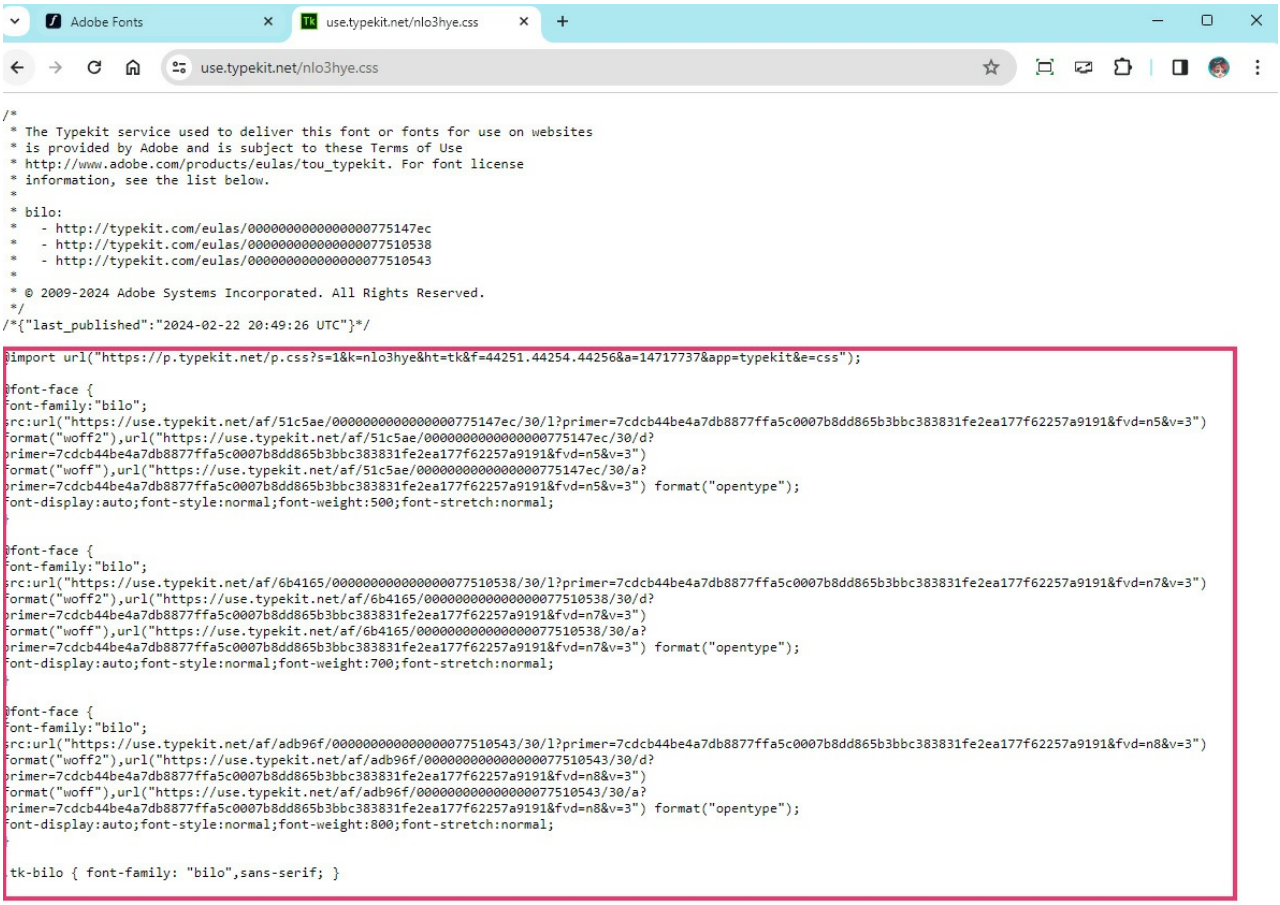

Step 5: Manually Add Your Adobe Font's CSS to Digioh

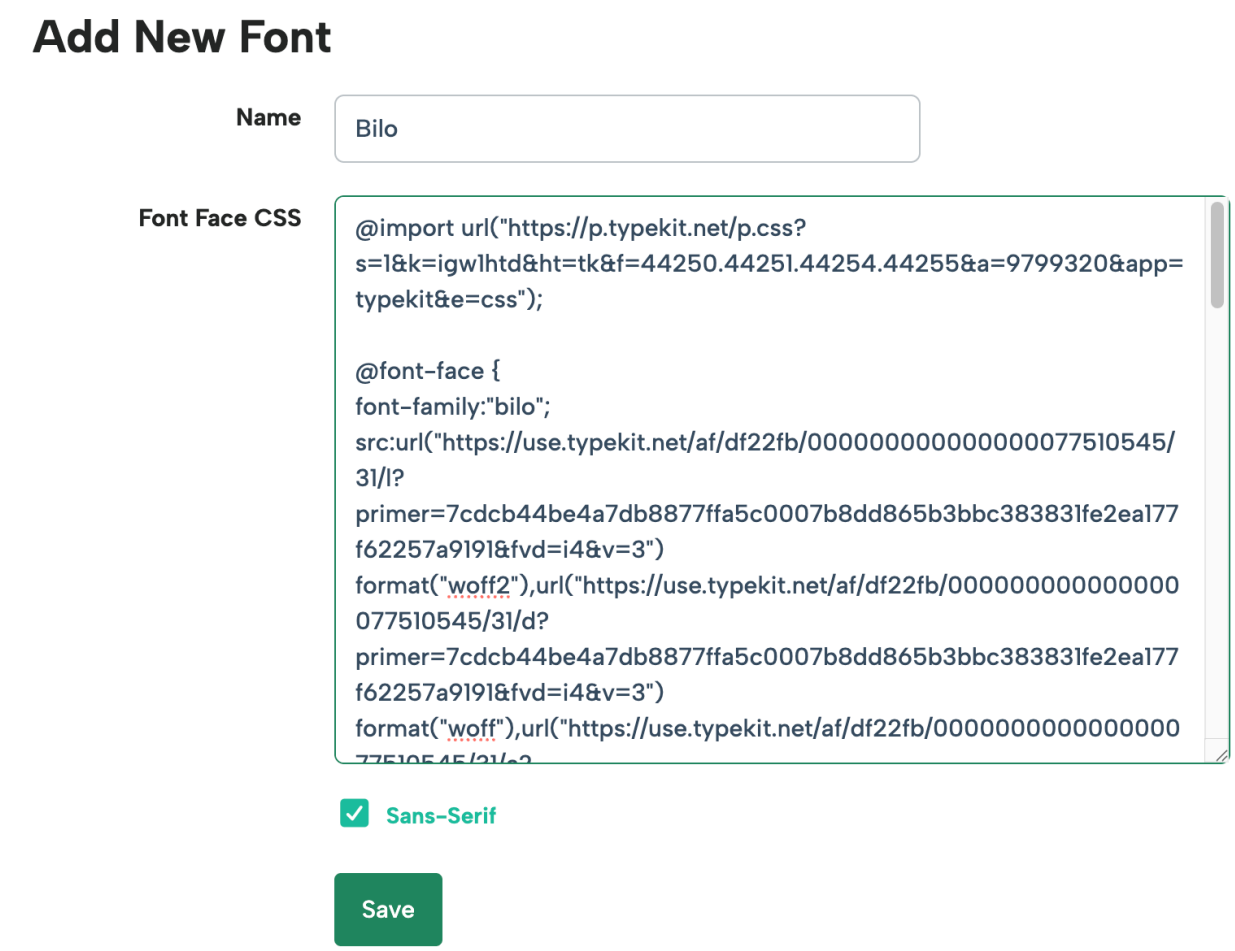

Click "Or Manually Add Custom Font CSS →"

Back in the Adobe tab, open the URL of the CSS file provided in their embed code. Copy the Import URL and Font Face from the CSS.

In Digioh, paste this code into the Font Face CSS section.

Now, add the Font Name. **IMPORTANT: The font-family name in the CSS must be identical to the name in Digioh here.**

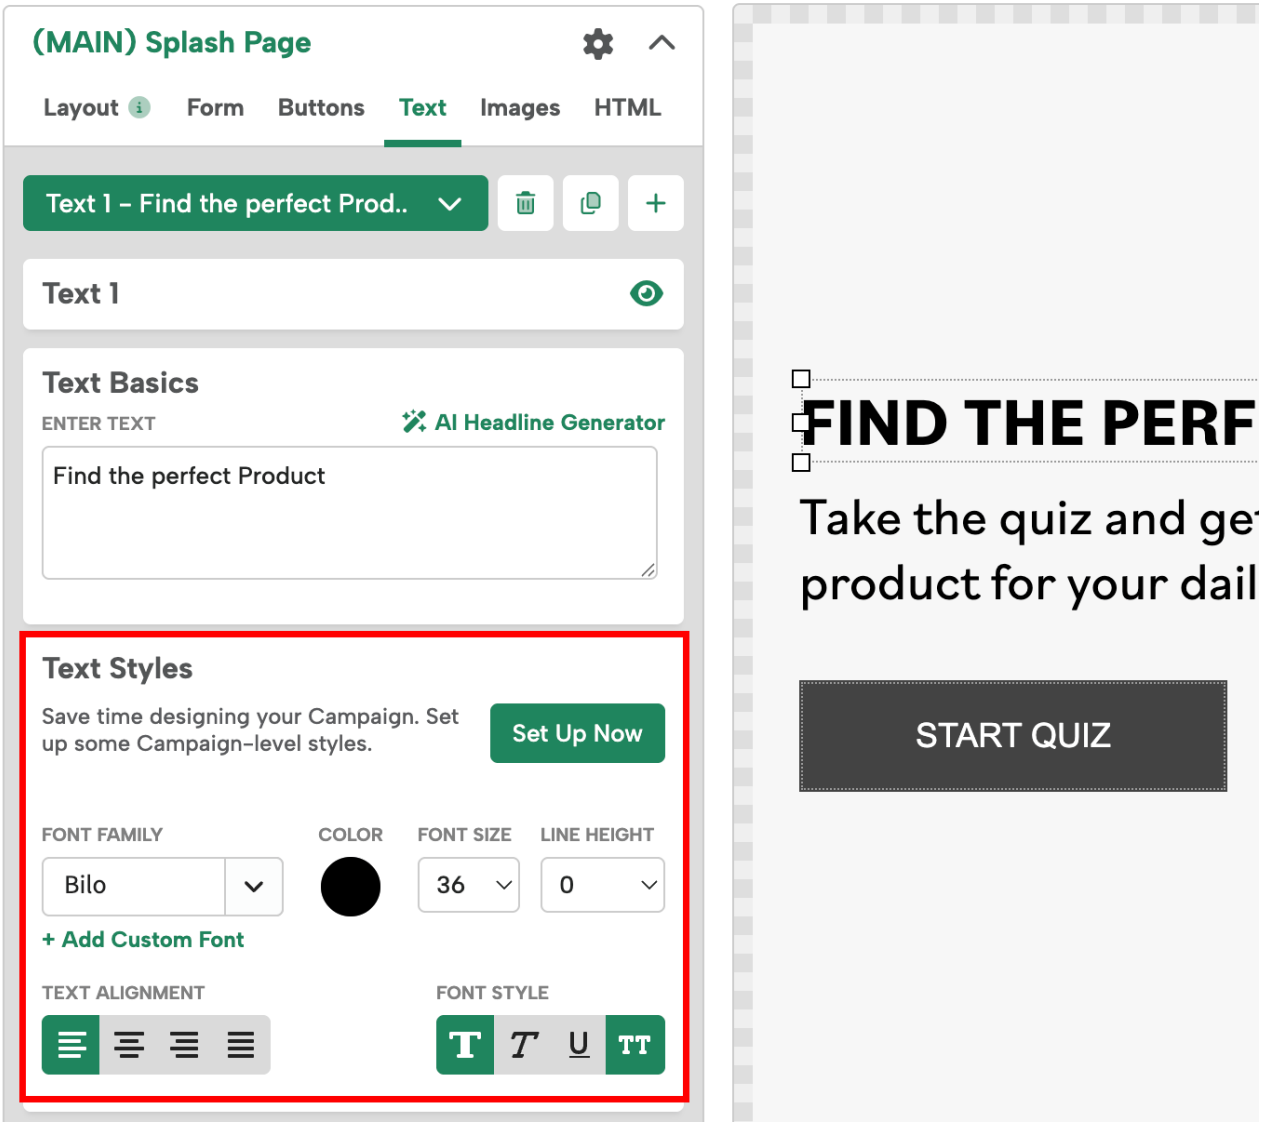

If the font isn't a Sans-Serif font, uncheck the "Sans-Serif" checkbox.

Click Save to add the font to your account. Your Adobe font is now available in the editor!

Step 6: Add Your Adobe Font to a Campaign

Once you add your font to Digioh, you can use it in a campaign design by selecting it from the font dropdown menu, under the "Custom Fonts" section.

Bonus: Custom Font Weight

If your font has multiple weights listed in the CSS, you can use the specific font weights in Digioh as well.

For example, the Extra Bold version of Bilo has a font-weight of 800. This is even heavier than the bold

version. So to use that inside of Digioh, we can add Extra CSS styles.

Key: font-weight Value: 800
