How To Show Multiple Widgets At The Same Time

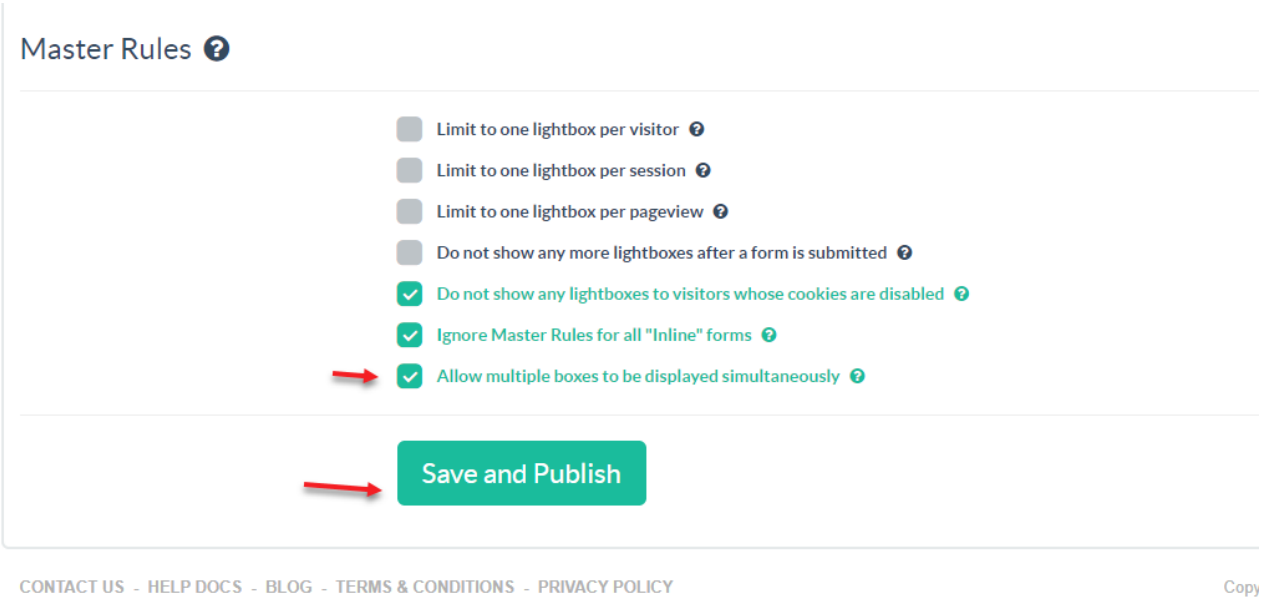

Last Modified on 07/01/2026 12:40 pm EDT

To display multiple campaigns on your site simultaneously, follow these instructions.

Go to the Master Rules page:

Check the campaign labeled "Allow multiple campaigns to be displayed simultaneously." Click **Save and Publish**.

This rule is turned off by default because multiple widgets can clutter the screen, resulting in a poor user experience. **Before enabling this rule, we recommend reviewing the rules on your widgets to see which ones may show at the same time.**

If you have widgets with overlapping rules and want to prevent some from showing at the same time (or limit how often they show), consider using some of these targeting conditions.

- Set up **Current Page URL rules** to some of your widgets. By limiting widgets to specific pages, you can prevent visitors from seeing too many widgets on a single page.
- Add a **Max Displays Per Visitor rule** to some of your widgets. This rule ensures users only see the widget a set number of times. If you run widgets with a one-time message, like a cookie policy notice, this rule keep it from showing after the user has seen it. That way, one-time messages won't run alongside other widgets regularly.

- Set a **Max Displays Per Session Equals 1** rule on each widget.

If you have many widgets in your account, please note that turning this master rule on could result in unexpected behavior. When this rule is turned off and two widgets are set to show at the same time, the one higher on the Campaigns list will take priority, and no others will show. Turning this master rule on removes that prioritization, allowing all widgets that can show on a given page to show up.
