How to Integrate With Elastic Email

Last Modified on 07/23/2026 3:16 pm EDT

Digioh captures leads from your website and pushes them directly into your Elastic Email account. With an intuitive drag-and-drop form builder, Digioh makes it easy to launch brand-compliant forms. Digioh offers a range of personalization and targeting options, so you can display personalized content to the right visitor at the right time. On average, new clients 2x their opt-in rates in the first 7 days with Digioh.

If you are setting up a Digioh integration by yourself, we first recommend reading about Digioh Integration Basics.

Follow these steps to set up an integration with Elastic Email:

1. In Digioh, head to the Integration page, and create a new integration
2. Select Create an "API Form Post" integration
3. Enter this for your Form Post URL: https://api.elasticemail.com/v2/contact/add?publicAccountID=[PUBLIC-ACCOUNT-ID]&email=[EMAIL] (you will need to replace [PUBLIC-ACCOUNT-ID] with your actual Public Account ID in the URL)

Note: This is a backend integration, and the Public Account ID will not be visible to end-users.
