

How To Add An Inline Widget To Your Google AMP Page

Last Modified on 06/10/2026 11:02 pm EDT

To add an inline form or widget to an AMP page, click the Widget section of the editor, and select Google AMP Smart Tag from the Position Using drop-down.

The image shows a 'Widget' configuration panel with the following settings:

- Widget Type:** Inline
- Display Rules:** Always Display
- Removal Rules:** Keep After Conversion
- Custom JS Rules:** Run All Custom Javascript
- Position Using:** jQuery Selector (dropdown open, showing options: Smart Tag, Google AMP Smart Tag, jQuery Selector, Absolute (Moves with scrolling), Fixed (Does not move with scrolling), Custom Function (Advanced))
- jQuery Method:** .after()
- Margin:** top (slider set to 0)

Copy the code that appears in the Google AMP Embed Code field.

Google AMP Smart Tag

Google AMP Embed Code 

```
<amp-iframe  
src='https://www.lightboxcdn.com/stati  
c/amp_iframe.html?uid=28ed1432-
```

Border
solid color 0 0
style color width radius

Extra CSS Styles

Add this code to your AMP page where you want the form to appear.

NOTE: The Digioh install code does not need to be present on the AMP version of your site for the inline to show up. You only need to add the AMP Embed code.

NOTE: When testing forms on a dev/staging site, you need to adjust the URL for the domain in the code. For example, you may need to change `www.domain.com` to `staging.domain.com`

If you have any questions about adding an inline to your AMP page, [send us an email](#) and we'll be glad to help!
