How To Set Up A Real Time Notification Integration

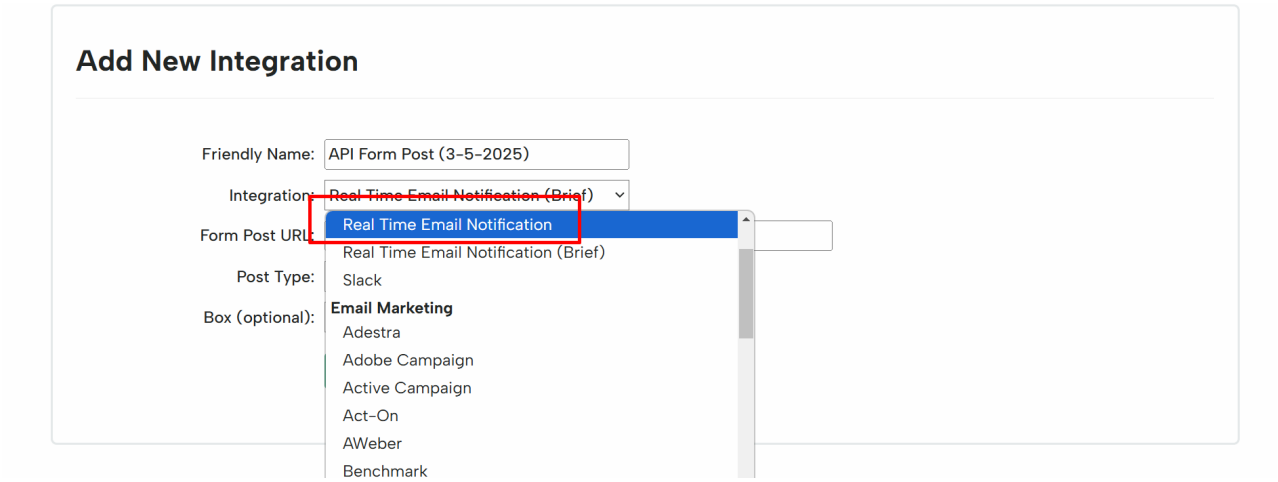

Last Modified on 06/24/2026 11:43 am EDT

If you want to send notifications to a member of your team each time a specific widget is submitted, you can set up our real time email notification.

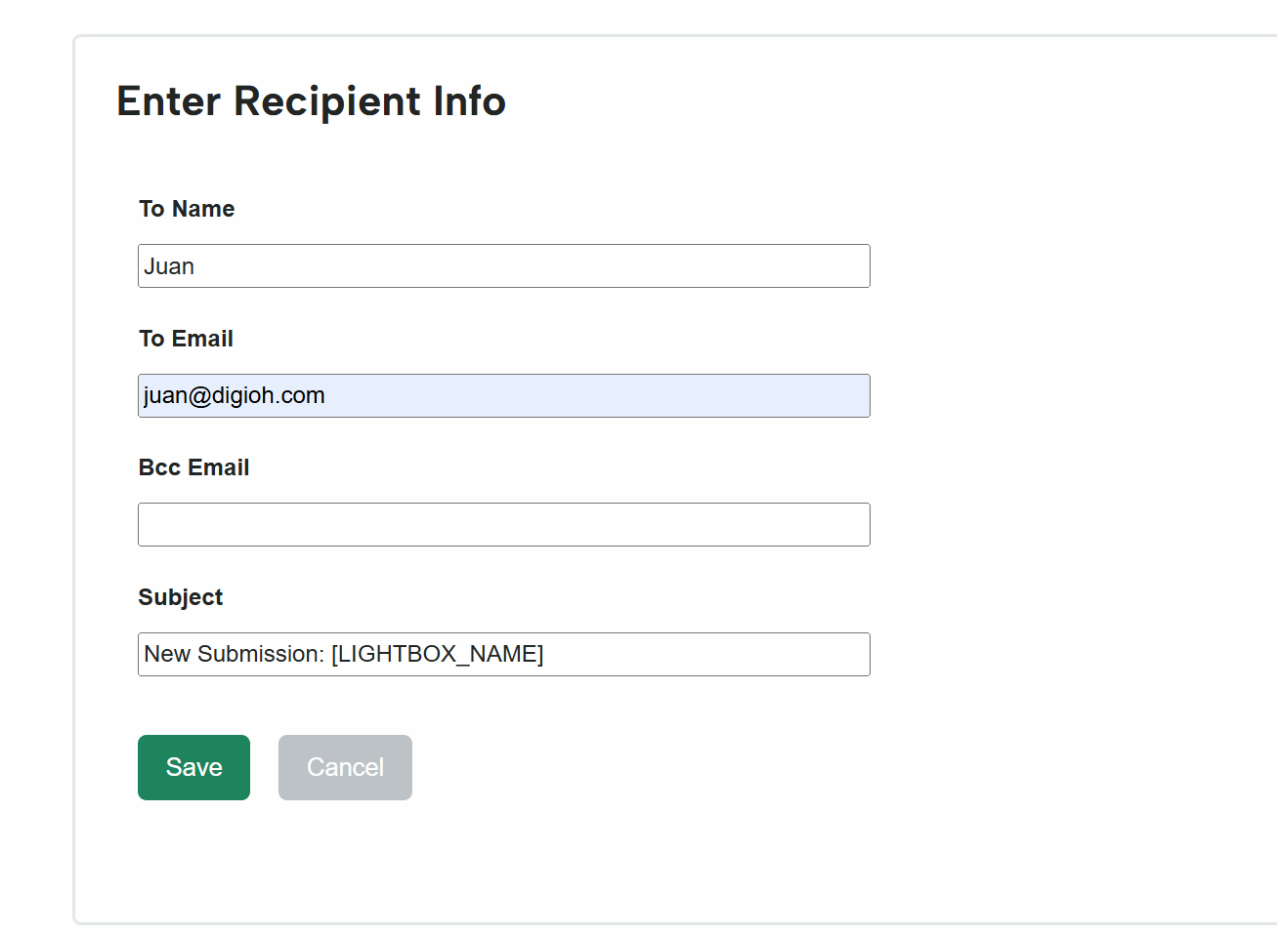

Head to the Integration page and create a new integration

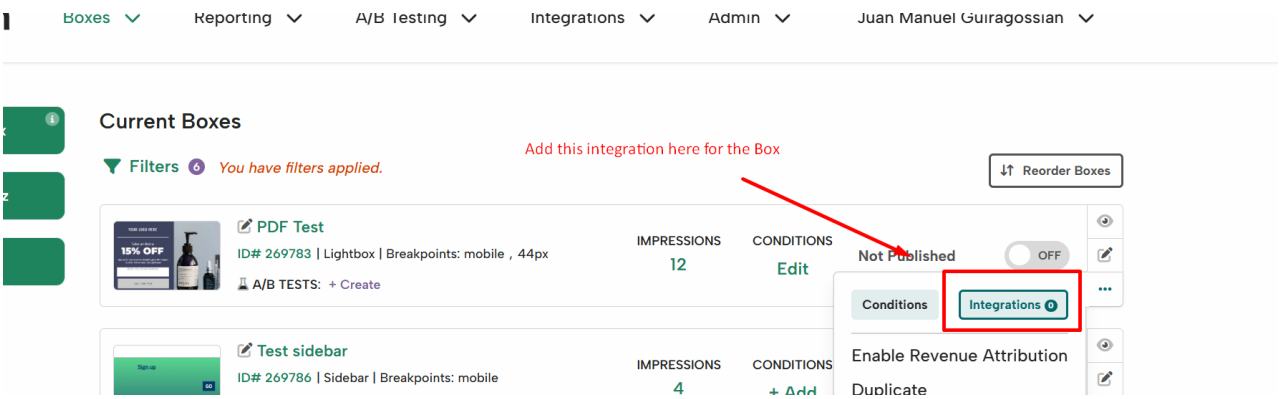

Give your integration a name, and select Real Time Email Notification from the Integration dropdown

Click Create Integration. On the next page, enter a name and email address for the person who should receive the notification emails. You can also add BCC emails as well as edit the subject!

Save the integration, and head back to the Campaigns page to add it to a campaign using the add or edit link in the Integration column

An email will go out each time a user submits the widget you've added the integration to. The email will contain all the fields set up on the campaign, as well as the analytics date we collect on each submission, including GEO-IP info, referring URL, and Submit URL.
