

# How to integrate Digioh with Sendlane

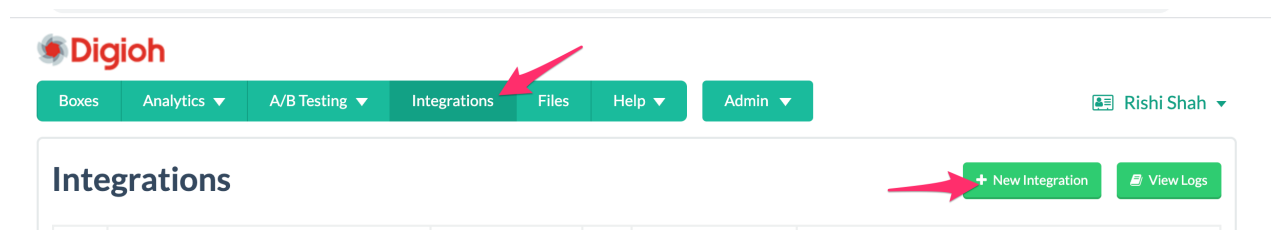

Last Modified on 06/24/2026 11:45 am EDT

**Sendlane** is an email and SMS marketing platform. You can use **Digioh forms** to capture leads and push to Sendlane in real-time. With Digioh, you can also build **email preference centers**, **surveys**, and **landing pages** integrated with Sendlane.

If you are setting up a Digioh integration by yourself, we first recommend reading about **Digioh Integration Basics**.

To set up your Sendlane Integration in Digioh, follow these steps.

1. Log into your Digioh account. Click on "Integrations", "New Integrations", and select "Sendlane" in the dropdown.

2. Enter your Sendlane API Key, Hash Key, Subdomain, and List ID (you can create multiple integrations if you have different forms that go to different lists) and click "Create Integration". [Follow these steps](#) to find this information in your Sendlane account.

A screenshot of the 'Add New Integration' form in the Digioh application. The form is titled 'Add New Integration' and contains several input fields: 'Friendly Name' (filled with 'Sendlane (4-30-2021)'), 'Integration' (a dropdown menu with 'Sendlane' selected), 'API Key' (filled with 'ex. 2487ed634253610'), 'Hash Key' (filled with 'ex. cb27d244a590e55833bf47a010adc4c1'), 'Subdomain' (filled with 'ex. mybusiness'), 'List ID' (filled with 'ex. 17'), and 'Box (optional)' (a dropdown menu with '[None]' selected). A green 'Create Integration' button and a grey 'Cancel' button are at the bottom. A link 'Where do I find this?' is next to the API Key field.

3. Next, click "Map Fields" to add any additional fields (like Email Address, GEO, Referring Source, and

More)

4. Add the integration to any campaign, and every new submission will go to your Sendlane lists in real-time.
