How to iFrame a Preference Center or Landing Page

Last Modified on 06/11/2026 10:06 am EDT

Push Planet is a great tool for hosting separate landing pages, email preference centers, and surveys. However, if you need to embed a Push Planet landing page on your site (instead of hosting it as a separate page), you can use iFrames.

Here is an example iFrame:

<iframe src="https://hosted.pushplanet.com/test/" title="Push Planet Landing Page" width="1100" height="1500"></iframe>

Replace the example width and height with your own values, which should be based on the Page's actual width/height in the Editor.

Then, replace the "src" with the URL of the Push Planet page you want to embed. Ideally, use the "*hosted.pushplanet.com*" version of the URL in the iFrame (instead of your custom domain).

The iFrame can live anywhere on your website. For a more native tool for embedded forms, please ask us about the Digioh native platform as an add-on to your existing contract.
