

How to integrate with Adobe Campaign

Last Modified on 06/24/2026 11:56 am EDT

If you are setting up a Digioh integration by yourself, we first recommend reading about [Digioh Integration Basics](#).

Digioh integrates with Adobe Campaign (Standard Version), whereby form submissions add email addresses to an Adobe Campaign list.

You'll need the following:

- Tenant ID
- API Key
- Access Token

From the Digioh Integrations tab, click New Integration and select Adobe Campaign from the list. Then enter your authentication information.

For help getting this information, please refer to [Adobe API Documentation](#). Also:

- The Tenant ID can be found in your Adobe Marketing Cloud URL:
`https://yourtenantid.experiencecloud.adobe.com/campaign.html`
- The API Key (Client ID) can be found in the [Adobe I/O Console](#).

Authenticate Your Adobe Account

Your Adobe Tenant ID

Your Adobe API Key

Your Adobe Access Token

[Click here to find your Adobe API info →](#)

SaveCancel

When connected, you can select the list target:

Integrations				+ New Integration View Logs	
ID	Name	Type	Actions		
59401	Adobe Campaign (9-21-2021)	Adobe Campaign	Connect Update [Choose a List] Duplicate Delete		✖

Finally, attach your new integration to the relevant campaigns in Digioh, and emails will flow to Adobe Campaign. For adding to multiple lists, simply create another Integration (e.g. by duplicating), set it to the new list, and attach to the Digioh Campaign. You can attach any number of list integrations to a Campaign.
