# How to integrate with Tealium

Last Modified on 06/10/2026 11:02 pm EDT

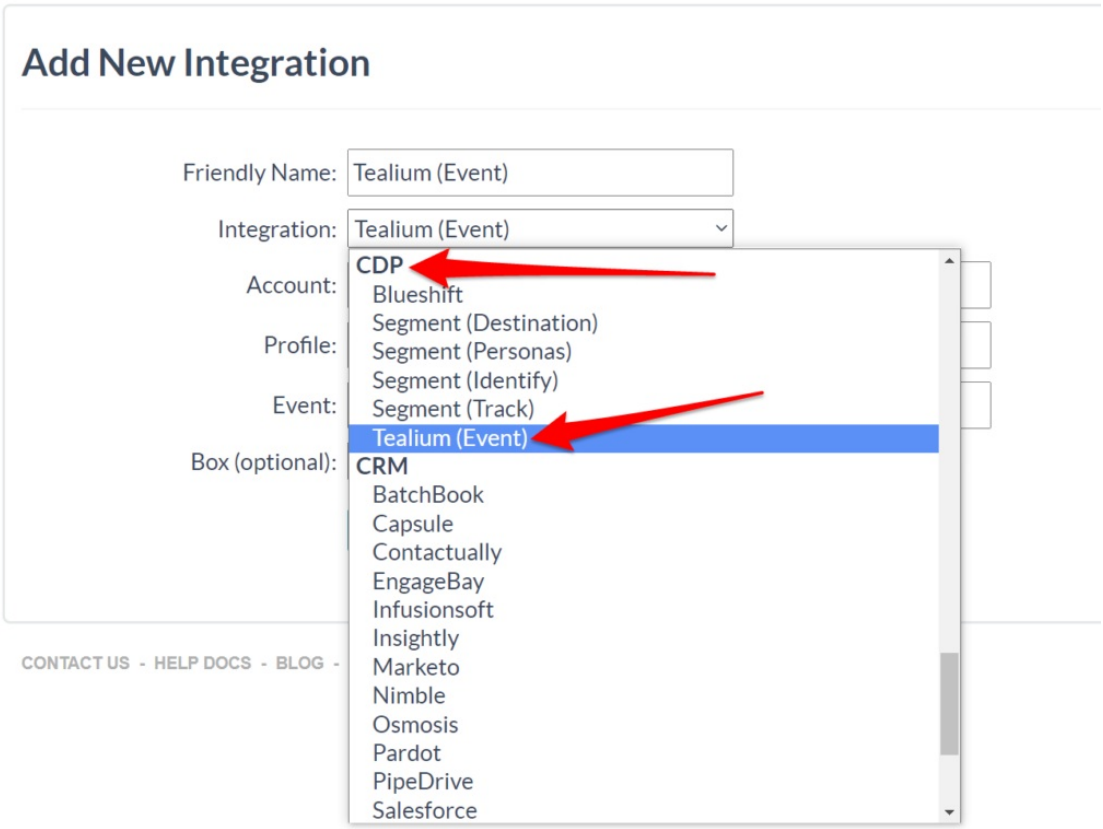

Digioh integrates with Tealium, the Industry-Leading Customer Data Platform (CDP), and can send form submission data and other metadata to the Customer Data Hub.

This article is about integrating Digioh and Tealium so that form submission data flows to Tealium. There's a different article on deploying the Digioh JS tag via Tealium.

To set up your Tealium integration in Digioh, follow these steps.

**Note:** If you are setting up a Digioh integration by yourself, we first recommend reading about Digioh Integration Basics.

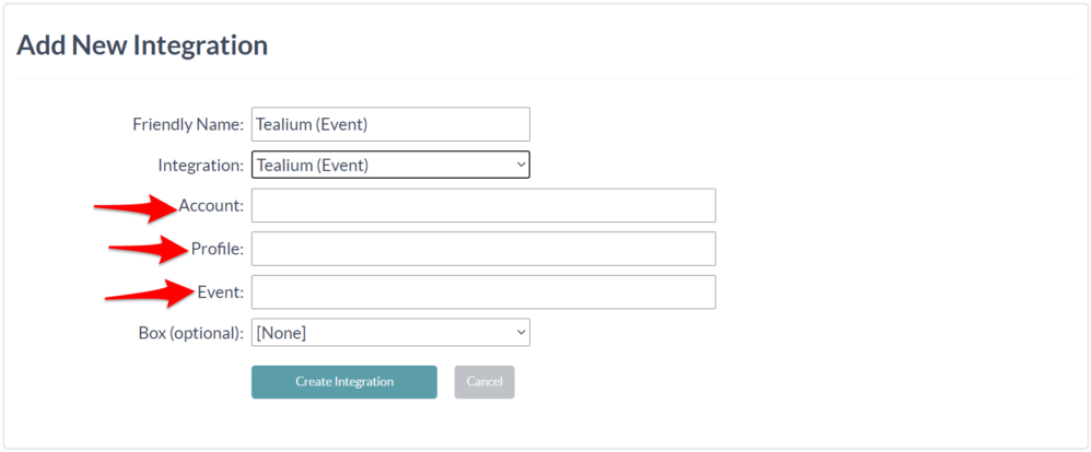

First, log in to Digioh and go to Integrations. Click New Integration and select Tealium (Event) from the drop down list, under the CDP section:

You'll need to know and configure these two values for your Tealium account:

- tealium_account
- tealium_profile

And also you need to decide the "tealium_event", which is the event name.

The [EMAIL] field is mapped automatically for you, but you can edit this, and can add any additional fields you need in the mapping interface:

## Map Fields

**Tealium (Event) (10-19-2021) (ID 59642)**

**Field Name** another_custom_field

**Field Value** Mapped [CUSTOM_2]

Save Field Mapping | Back to Integrations

| ID | Field Name | Field Value | Delete |
|---|---|---|---|
| 44081 | tealium_account | test | Edit Field Value \| Delete |
| 44082 | tealium_profile | test | Edit Field Value \| Delete |
| 44083 | tealium_event | ev1 | Edit Field Value \| Delete |
| 44084 | email | [EMAIL] | Edit Field Value \| Delete |
| 44085 | my_custom_field | [CUSTOM_1] | Edit Field Value \| Delete |

Digioh offers a wide range of optional "analytics" fields you can pass to Tealium if desired.
