

How do I updated my hosted page URL?

Last Modified on 06/24/2026 12:25 pm EDT

Click on your profile name and select "Custom Domain" or go here:

<https://account.pushplanet.com/HQ/CustomDomain>

Modify the text next to "Hosted Page Name" and click save

Domain Settings

Custom Domain	<input type="text"/>
Hosted Pages Name	<input type="text" value="rishi"/>
	<input type="text" value="Do not use Hosted Pages Name with Custom Domain"/>
Base Domain Page ID	<input type="text" value="0"/>

The Base Domain Page ID, can be one of the page IDs in your account. You can leave this field blank (or 0). This will be the page your account will go to when hitting your root domain.
