

How do I Run a Test for my Iterable Preference Center?

Last Modified on 06/10/2026 11:02 pm EDT

To test how a preference center would look for someone in your Iterable project, follow these steps.

First, make sure your page is turned on

ID	Name	URL	Integrate	Desktop	Mobile	General	Mode	Publish	Eligible	Live
4880	Page 4880	Edit	Add						<input checked="" type="checkbox"/>	

Click Edit under the URL column.

The screenshot shows the PushPlanet dashboard with a navigation bar and a table of pages. The table has columns for ID, Name, URL, Integrate, Desktop, Mobile, General, Mode, Publish, Eligible, and Live. The 'demo' page (ID 1516) is highlighted, and a red arrow points to the 'Edit' link under the 'URL' column.

Then, click the custom domain URL.

The screenshot shows the configuration modal for 'demo (1516)'. It has three sections: 'Hosted Page URL' with an 'edit' link and a URL template, 'Custom Domain URL' with an 'edit' link and a URL template, and 'URL Path' with a text input field containing '/some/custom/path/that-you-like'. At the bottom are 'Save' and 'Close' buttons. A red arrow points to the 'Custom Domain URL' field.

Enter your email to test whether it's in Iterable.

Iterable Hosted Unsubscribe URL

`https://pref.domain.com/PrefCenter/some/custom/path/that-you-like?email={{email}}&campaignId={{campaignId}}`

In Iterable, go to [Settings > Project Settings](#), and enter this URL in the Hosted Unsubscribe URL input. [Click here for more detailed instructions.](#)

Run a Test

Enter an email (make sure it exists in your Iterable account)

Run Test

Close

If you see an error page on your test, this means one of the following:

- The tested email address is not in your Iterable Project (common error for brand new projects).
- You are not using a Server-Side Iterable API Key (the Iterable API key you added does not have the proper privileges).

That's all there is to it! [Send us an email](#) if you have any questions.
