

How to Set up the Click to Call Extension

Last Modified on 06/10/2026 11:02 pm EDT

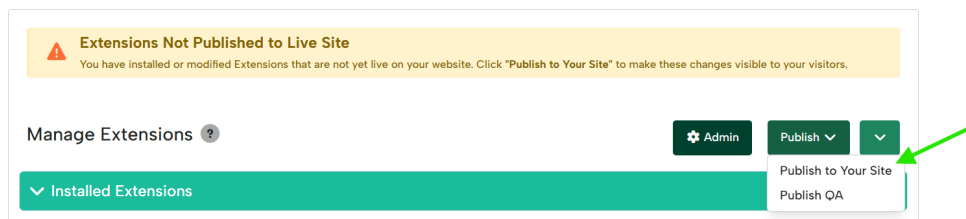

Sometimes you want visitors to be able to click a button and call a phone number directly. With the **Click to Call** extension, you can configure any button in a Digioh Campaign to initiate a call with a single click.

Step 1: Install the Extension

1. Select **Extensions** in your account dropdown
2. Find the **Click to Call** extension and click install:

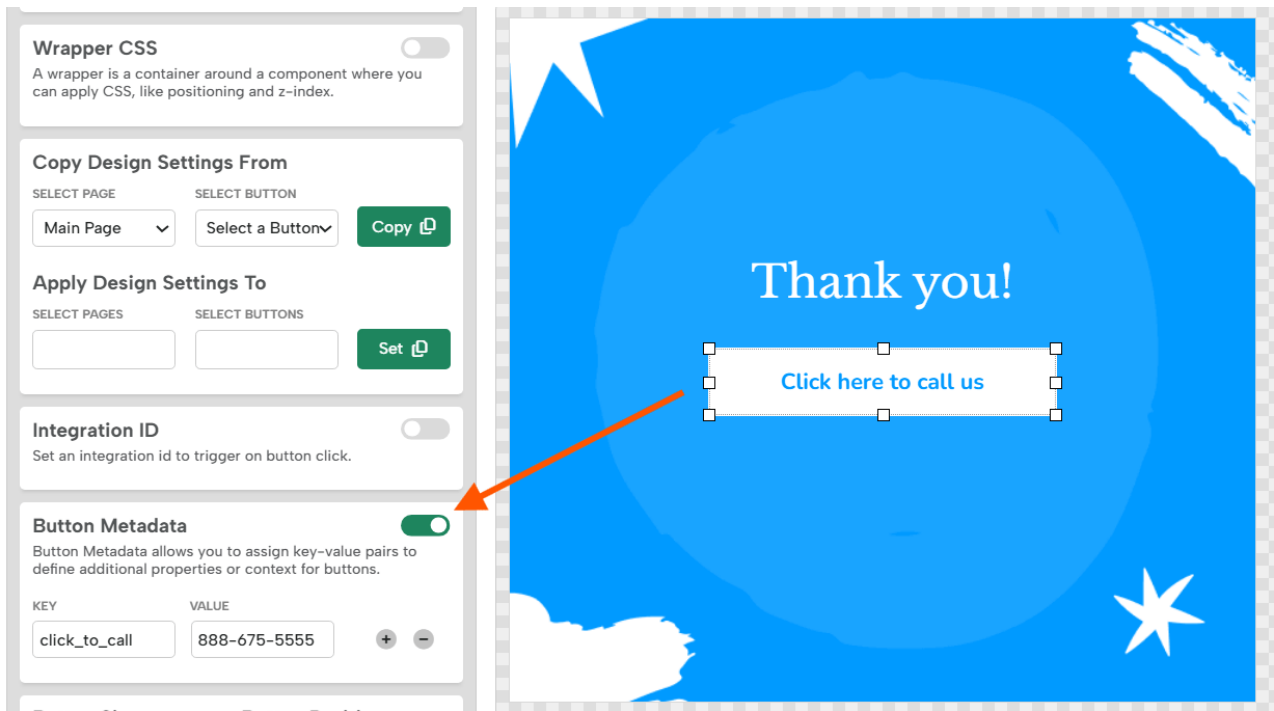

3. Once installed, click **Publish to your site** to activate it.

Step 2: Configure your Campaign

1. In your Digioh Campaign editor, select the element you want users to be able to click to place a call - This can be a button or a text element.
2. Add the metadata **click_to_call**. The value will be the phone number to call. **Note:** The value must contain at least 7 digits after stripping non-numeric characters. Format examples: +14155551234 or 888-675-5555. The extension strips dashes and spaces automatically.

When a mobile visitor clicks the element, the extension triggers the user's phone and prompts the user to place the call. On desktop, the behavior depends on the visitor's browser and whether a calling application (such as Skype or FaceTime) is installed.

If a button is configured to trigger the call, most other button actions (such as closing the Campaign or navigating to another page) will also execute alongside the call trigger. URL Redirects, however, **will not** trigger.
