How to map checkboxes to send custom values in an integration.

Last Modified on 06/10/2026 11:02 pm EDT

In this guide, I will show you how to map your checkboxes to send custom values to your Marketing CRMs.

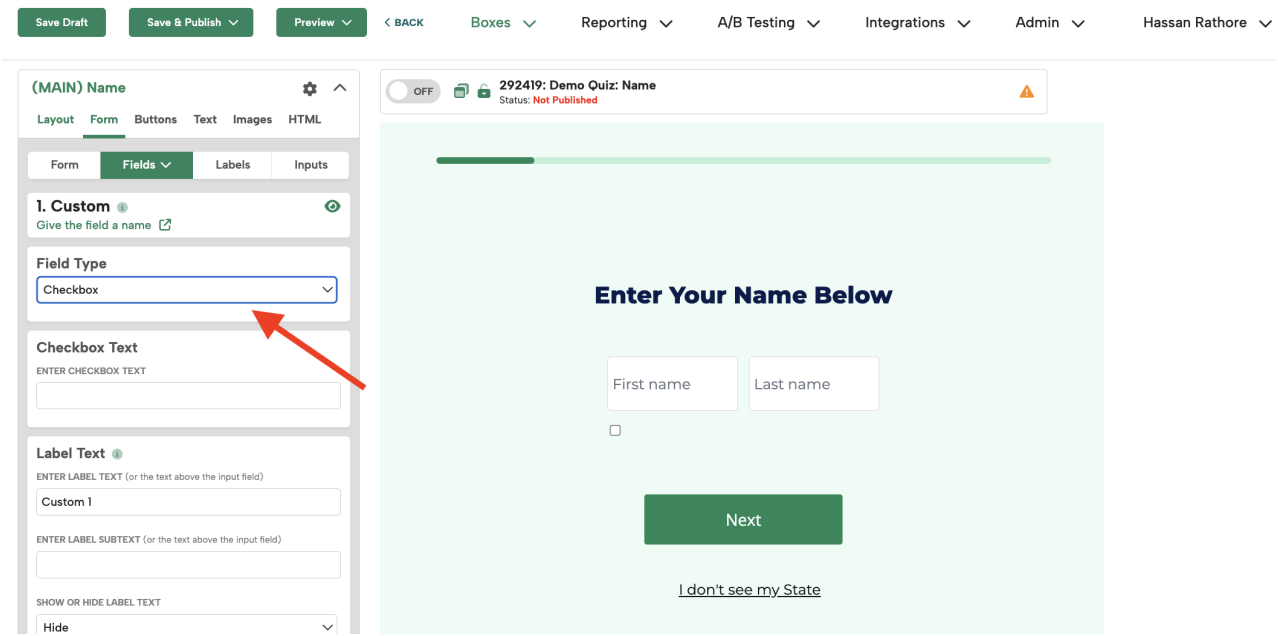

Step 1

Enable a custom Field.

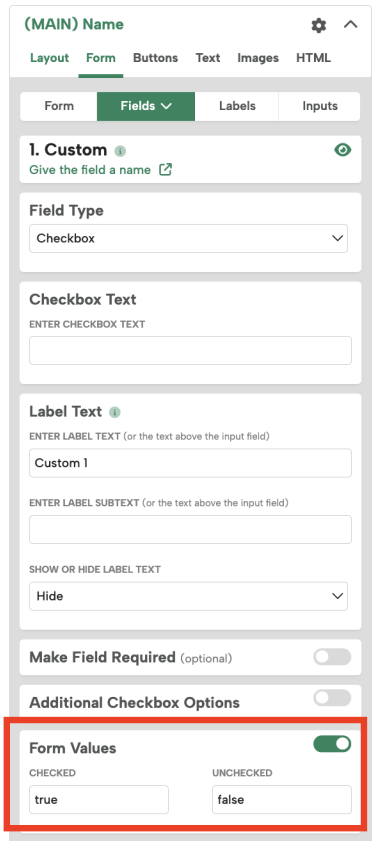

Step 2

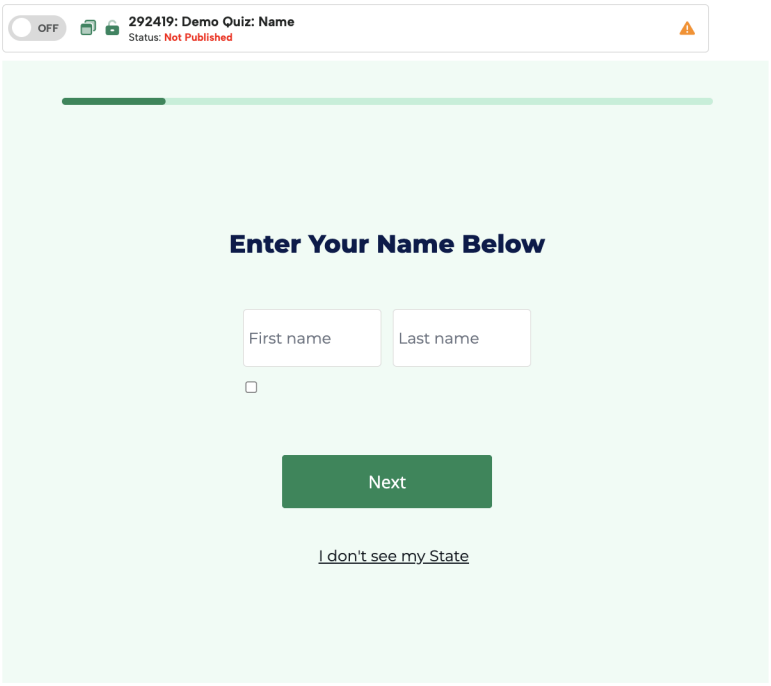

Select it as a checkbox under ***Field Type*** dropdown

Step 3

Under ***Form Values*** insert the Checked/Unchecked value and hit ***Save Draft*** button

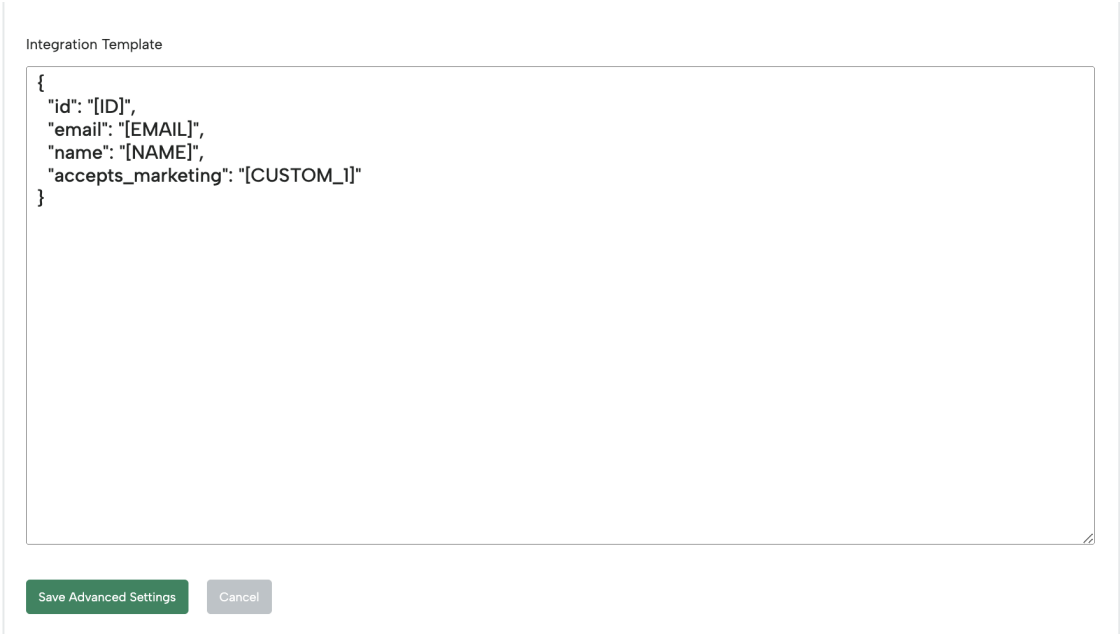

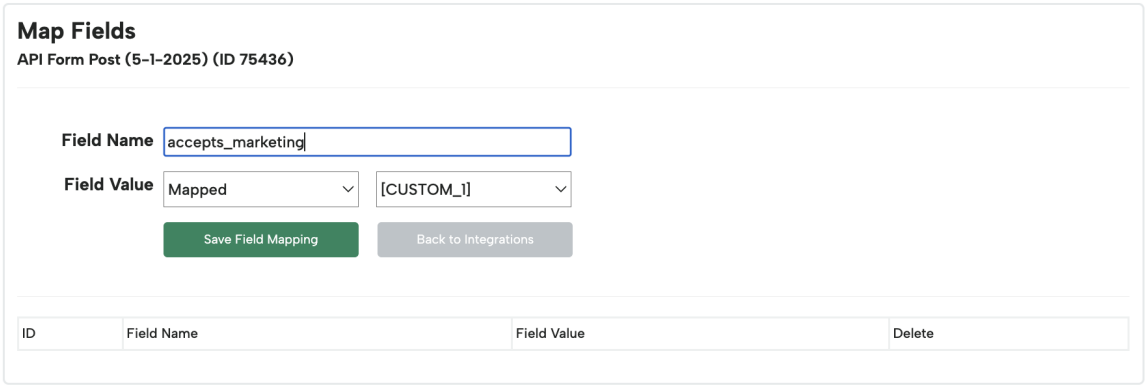

Step 4

Go to integration mappings. (JSON Payload)

Map your property name that was created in your CRM to accept this data with the custom field you used in Digioh. Such as if you have used custom 2 for the checkbox, map [CUSTOM_2]

For Native integration with *Form* as ***Post Type*** the mapping looks like this

You are all set.
