

# Control the color, size, and font family of inline error messages

Last Modified on 06/24/2026 12:49 pm EDT

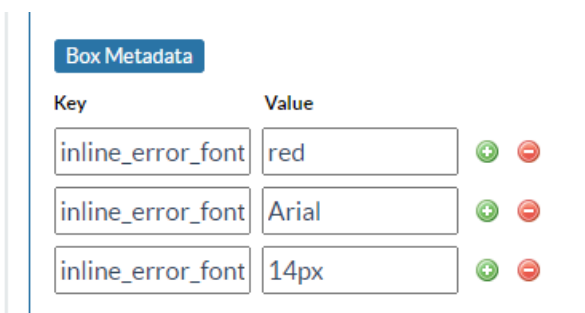

The Digioh Campaign editor does not provide much control over the look and feel of inline error messages.

The extension **Control inline error text color, font, and size** provides this. Find and install the app from your profile menu top right, Custom JS (Apps).

Then you can configure [box-level metadata](#) as follows:

- `inline_error_font_color` : CSS *color* - Standard color names like "red", "blue", etc, as well as RGB values #FF0000 (which is bright red)
- `inline_error_font_family` : CSS *font* - Font name like Arial, Times New Roman, etc
- `inline_error_font_size` : CSS *size* - 14px, 20px, etc

First Name and Last Name are both required.
