Webbula Email Verification + Threat Detection API

Last Modified on 06/25/2026 9:32 am EDT

What You'll Learn in This Article

- Integrate Webbula with Digioh to mitigate email risks
- Obtain and set up your Webbula API Key
- Add website IP addresses to Webbula for proper integration
- Contact support for assistance with the setup

The Webbula integration helps Digioh users mitigate email risks like bots by checking form submissions for over 50 email deliverability threats that are not detected by simple email verification tools.

> For over a decade, the world's most respected brands have trusted Webbula to help them overcome complex data challenges by leveraging the company's industry leading Email Verification and Threat Detection service. Webbula has been consistently ranked as a leader in data accuracy by independent, third-party consumer intelligence organizations. We're best in class with accuracy and transparency and have the scale required to meet our customers' growth objectives. Proudly headquartered in Pittsburgh, PA, truth in data is at the heart of everything we stand for and will always be our passion.

Webbula Integration Requirements

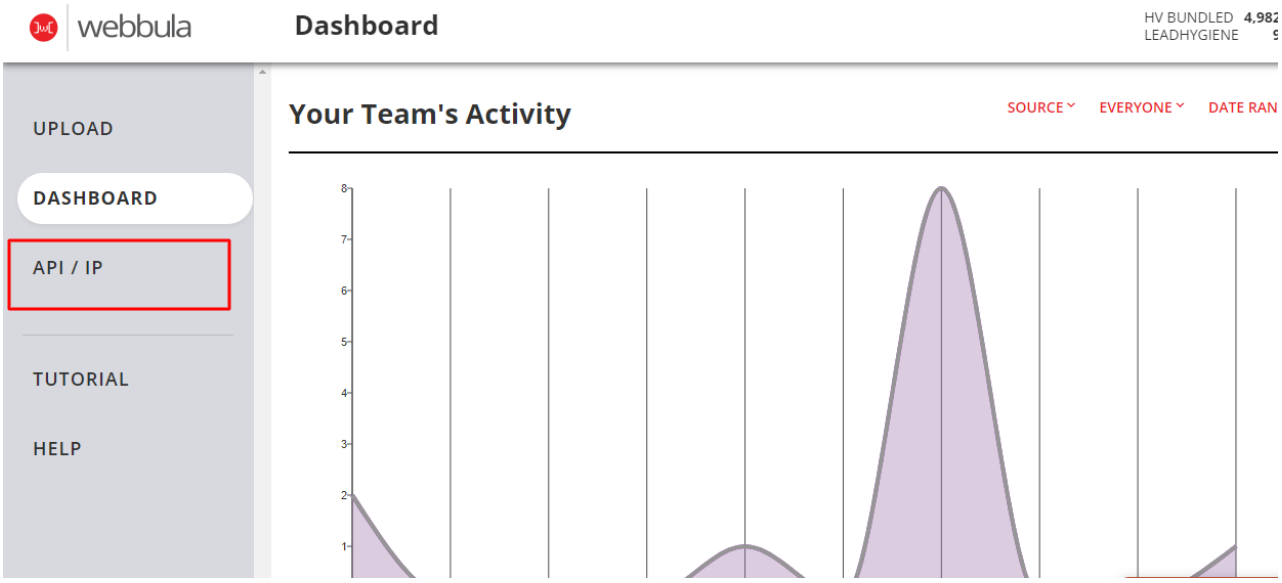

Before setting up your integration, you will need the following parameters from Webbula:

- X-API-KEY
- Profile

Getting an API Key:

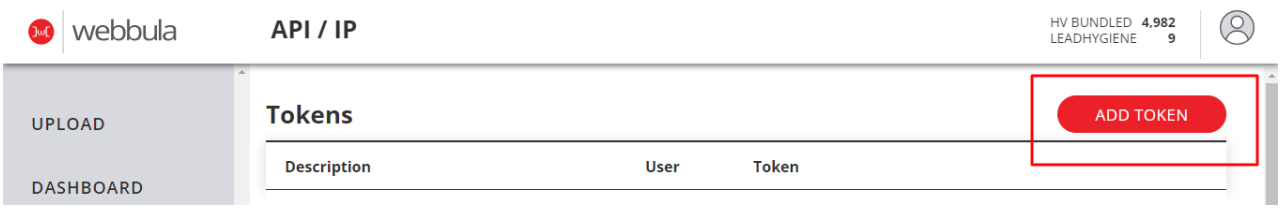

Log in to your Webbula account and create a new API Key.

Once logged in, select **API** from the left navigation.

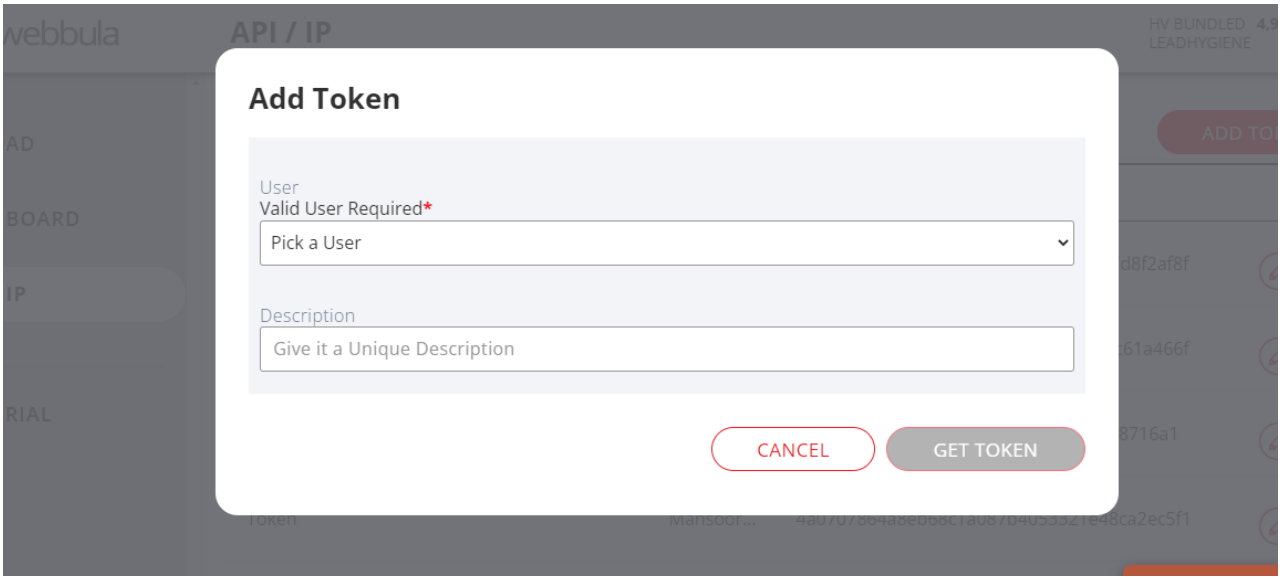

https://info.webbula.com/webbula-digioh-partnerships

Click **Add Token**.

In the Add Token Modal, select a User, set the description, and click GET TOKEN.

After creating the Token, send your Token to support@digioh.com using OneTimeSecret.

Once we receive your API Key, our API Integration Team will set up this integration for you.

Note: You have to add your website IP Addresses to Webbula.
