# How to Add Digioh JavaScript to Umbraco

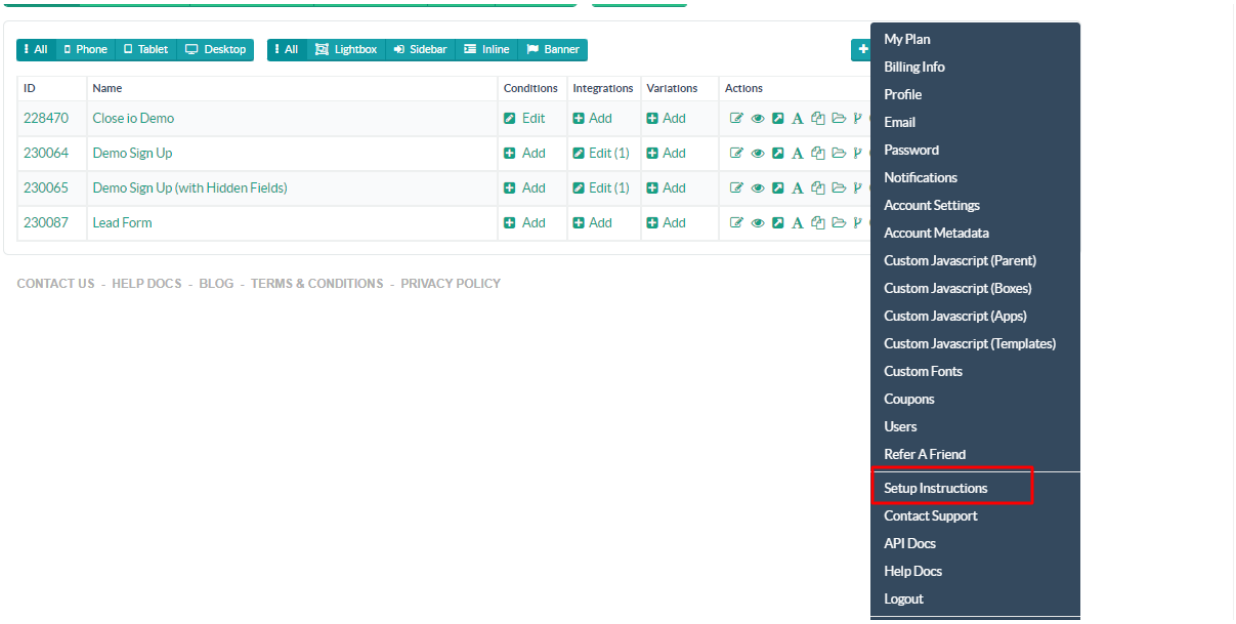

Last Modified on 06/24/2026 12:53 pm EDT

*Umbraco* is an open-source ASP.NET Core CMS that powers more than 700,000 websites worldwide.

Follow these steps to add the Digioh JavaScript to Umbraco.

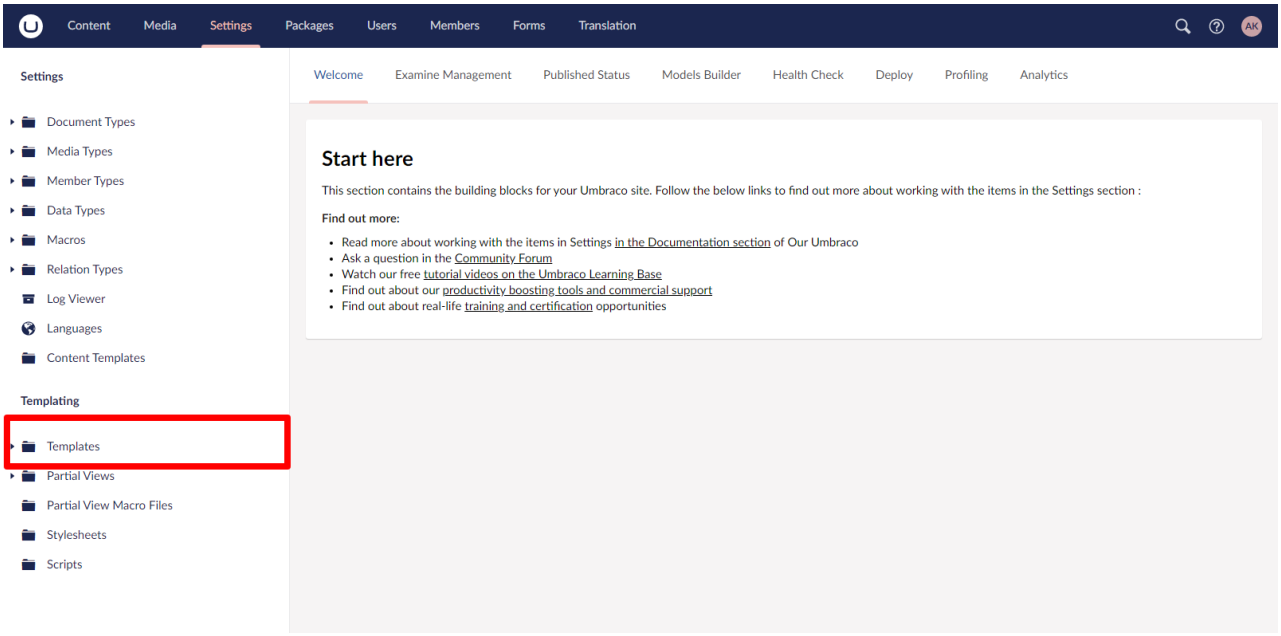

## 1) Get the Digioh Script

Log into your Digioh account and copy the JavaScript snippet.

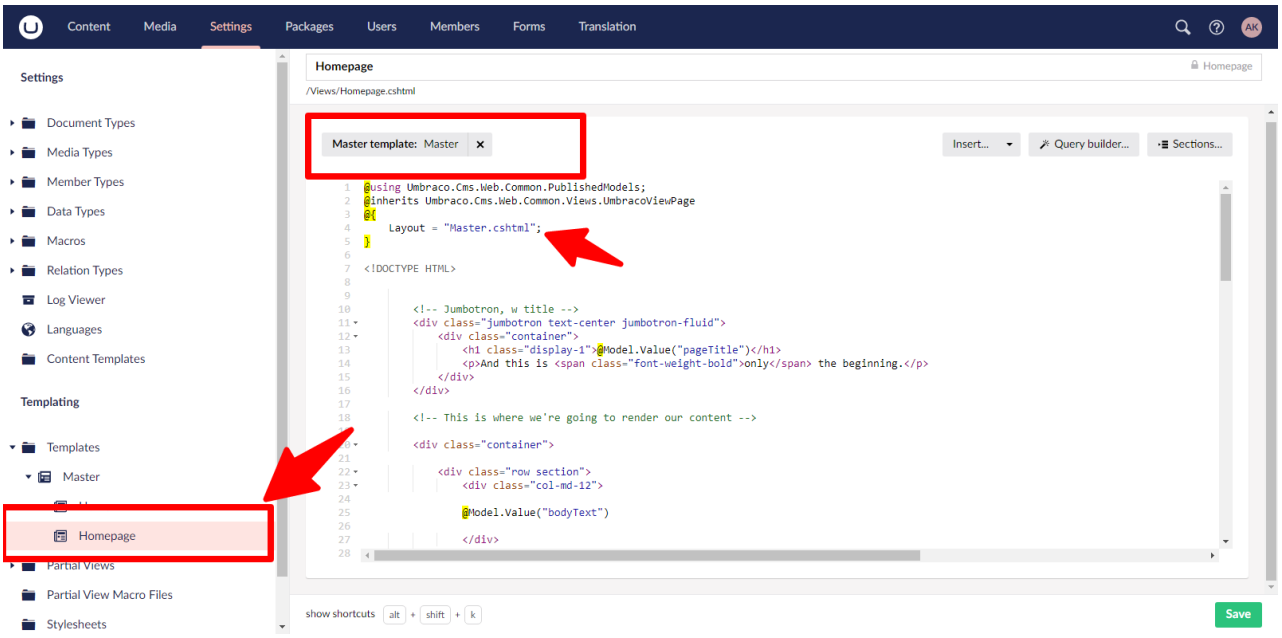

## 2) Add the JavaScript snippet to Umbraco.

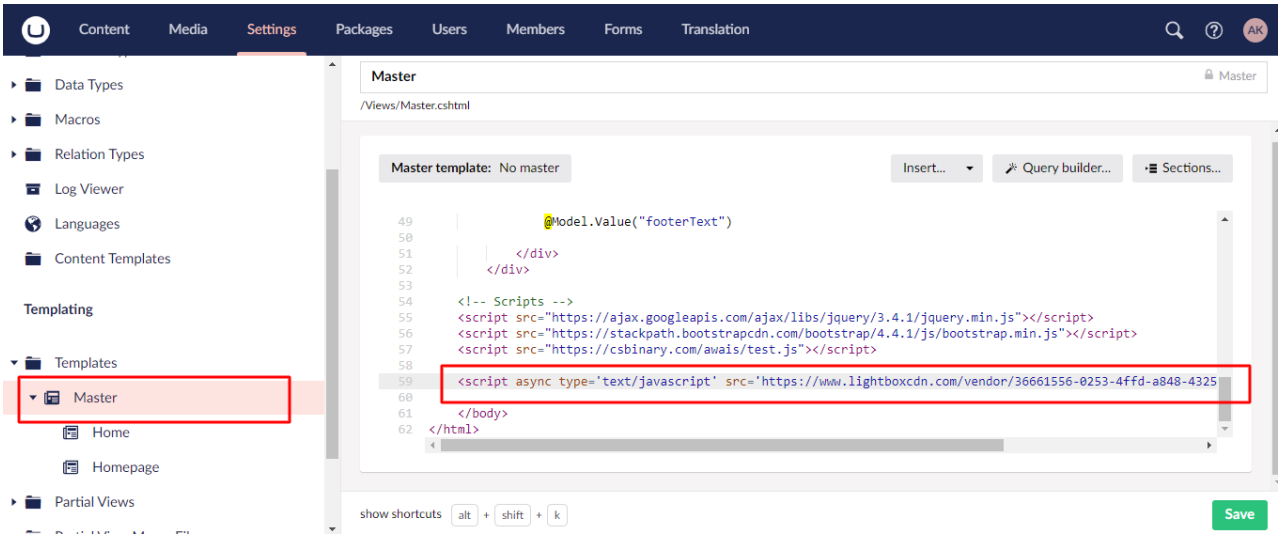

Log into Umbraco Back Office and navigate to **Settings > Templates**

Open your page and assign a Master Template to it. If you don't have a Master Template, create a new one.

Now add your Digioh JavaScript code to the Master Template File. Digioh will automatically load on all pages using the Master Template.

Finally, save your changes.

The Digioh JavaScript is now added to Umbraco. If you make any changes to your website or migrate to a new platform, be sure to verify that your Digioh JavaScript is still present and running. If it is not, your Digioh campaigns will stop functioning and data collection will be interrupted until the script is restored.
