Max Campaigns per Session

Last Modified on 06/23/2026 1:44 pm EDT

There are times you may need to limit the maximum number of campaigns that show per session. This can be done with Digioh's "Max Campaigns per Session".
The first step will be to install the App in your account. To do this, select the "Extensions" option from the top menu "Admin" button.
Then, install the "Max Campaigns per Session" app.
Under the top menu "Admin" button, select "Account metadata" section. Here, you can enter the maximum number of campaigns you want a user to see during a single session. To do this, enter metadata key: "max_boxes_session" and value: "N" where "*N*" is the number of campaigns you would like the user to see during a single session.
For example, if you wanted to limit the number of campaigns to 3 per session, you would add account metadata like this:

Click on the "Save" button.
This will limit the number of campaigns a user can see during a single session on your website. If a user sees maximum number of campaigns allowed, they will not see any more campaigns during that session.

To **exclude any campaign** or campaigns from the maximum number of campaigns allowed, you can add an account-level metadata key:

`ignore_box_ids`

Then pass the campaign IDs you want to exclude. For example:
`ignore_box_ids: 123221,33422,212312`

To exclude **all inline campaigns** from this, use the following metadata:

`ignore_inline_boxes: true`
