How to add Digioh JS to Shopify Checkout Page

Last Modified on 06/10/2026 11:02 pm EDT

> The `checkout.liquid` layout renders the checkout and is available only to Shopify Plus merchants. If your store isn't on Shopify Plus, then you can customize your checkout pages in the theme editor.

If you are on Shopify Plus, you can add the Digioh JS tag to your Checkout page. Standard Shopify users can add Digioh on order status pages by following this guide.

Adding Digioh to Shopify Checkout Pages

1. The checkout.liquid layout is located in the layout directory of the theme.

2. From your Shopify admin, go to Online Store > Themes.

3. Find the theme you want to edit, then click ... > Edit code.

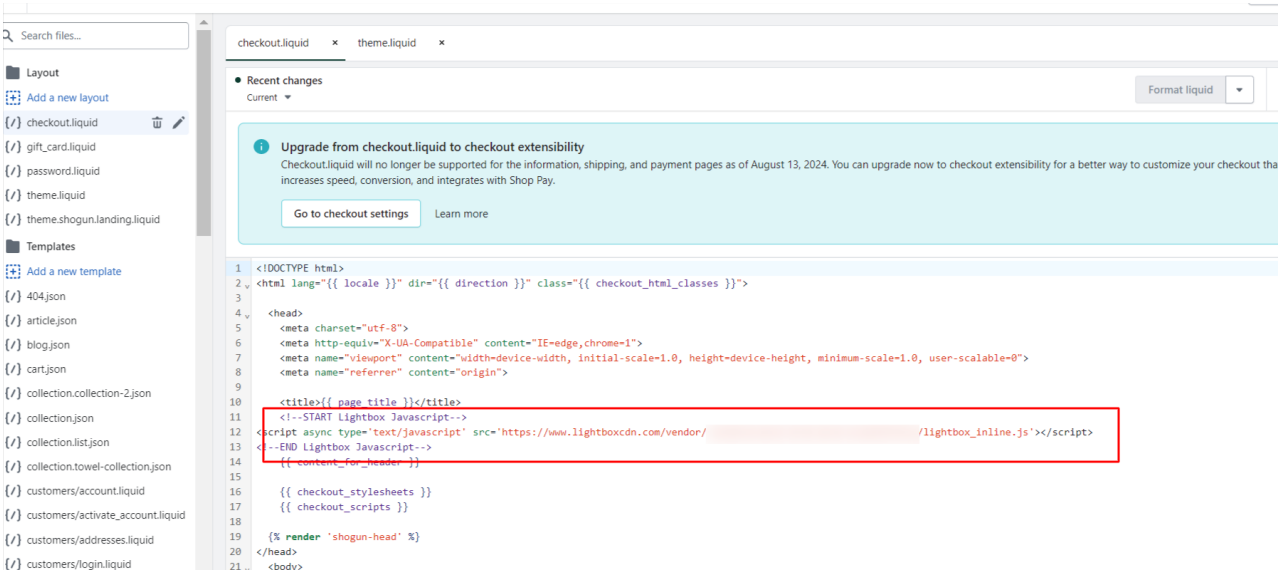

4. In the Layout directory, click Add a new layout.

5. In the drop-down list, select checkout and click Create layout.

You should now see checkout.liquid listed in the Layout directory.

Reference

After opening or creating the **checkout.liquid**, add the Digioh JavaScript to the checkout file head section.

After saving the file, you can set the campaign conditions in Digioh to display pop-ups on your checkout page.
