Add Tool Tip to Campaign Elements

Last Modified on 09/17/2026 2:33 pm EDT

A **Tooltip** is a handy way to share extra information without cluttering the screen. By adding a Tooltip in an element you can provide extra information about that element that will be visible on hover.

Installation:

To add a Tooltip for Campaign Elements, install the " **Tooltip**" app within Digioh. Here's how to do it:

1. Access your profile menu in the top-right corner of Digioh.
2. Select "Extensions"
3. Find and install the "**Tooltip**" app from the Available section

Configuration:

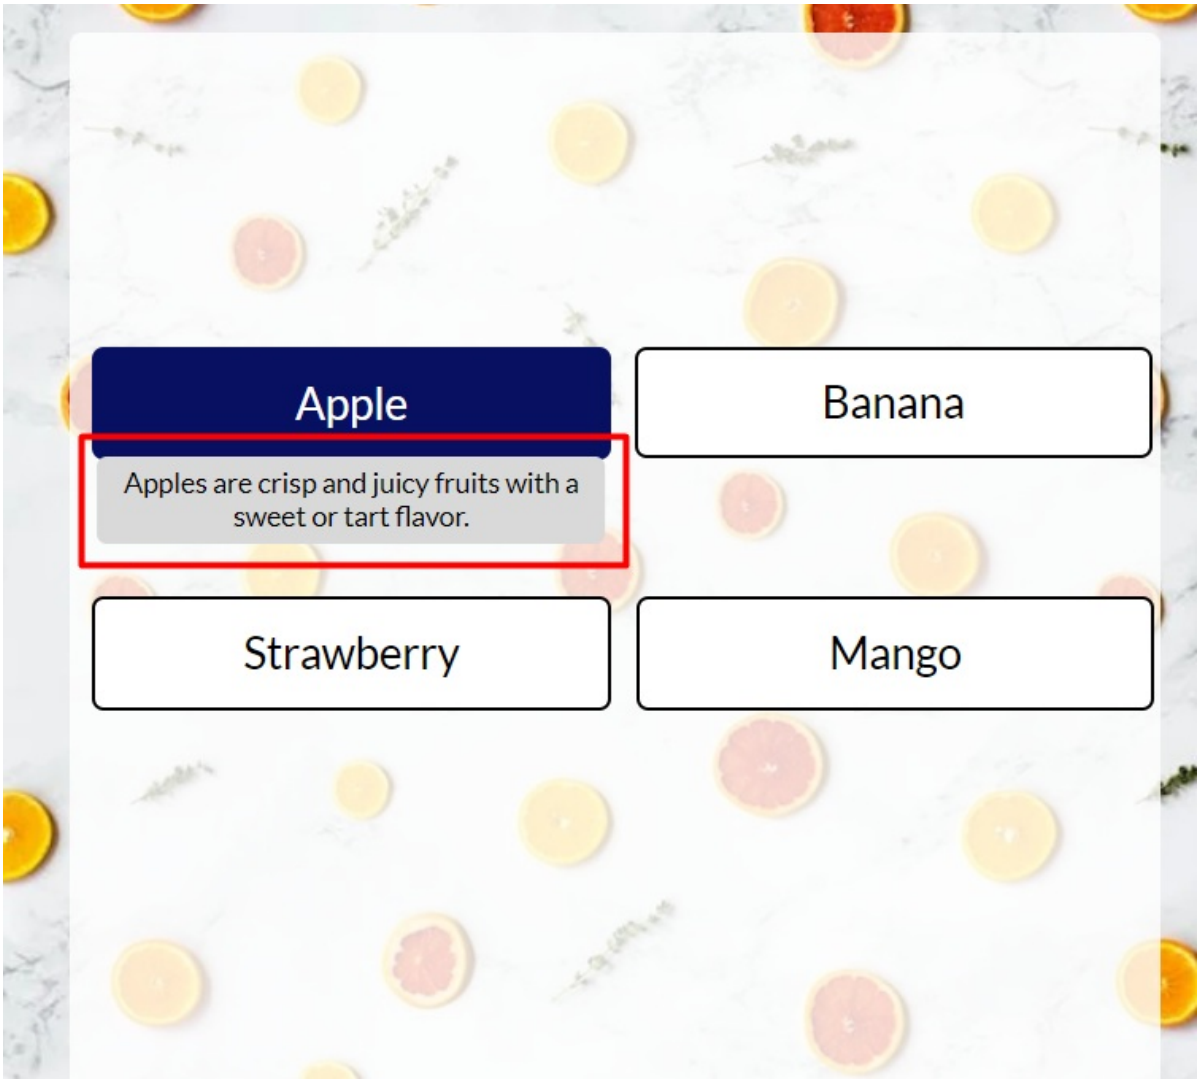

The app's configuration is managed using metadata.

Set the '**tooltip_text**' as the key and the desired tip as the corresponding value.

Example: tooltip_text=any text you want to show.

The Tooltip will appear on hover and will look like this by default:

To change the position of the tooltip, you can optionally configure element metadata **tooltip_position** as above, below, right, or left.

You can optionally change the **Background-color, font, font color and size** by configuring widget-level metadata as follows:

- tooltip_background_color : *CSS color* – Standard color names like “red”, “blue”, etc, as well as RGB values #FF0000 (which is bright red)
- tooltip_font_color : *CSS color* – Standard color names like “red”, “blue”, etc, as well as RGB values #FF0000 (which is bright red)
- tooltip_font_family : *CSS font* – Font name like Arial, Times New Roman, etc
- tooltip_font_size : *CSS size* – 14px, 20px, etc

Box Metadata

Key	Value
tooltip_backgrou	#edce5f
tooltip_font_colc	#699ff5
tooltip_font_size	16px
tooltip_font_fam	Roboto
