

How to control the tabIndex of a campaign

Last Modified on 06/11/2026 3:42 pm EDT

If you ever find that you need to set the tabIndex of a campaign to a specific value, or remove it entirely, you can do that via Campaign-level Metadata.

In the campaign that you want to modify, navigate to the Campaign Metadata under Campaign Settings in the upper left:

The necessary metadata is: `boxtabindex : <number>|remove`

For example, if you wanted to set the tabIndex to 5, you would set the metadata to `boxtabindex: 5`:

A screenshot of the 'Campaign Metadata' form. The form has a title 'Campaign Metadata' and a toggle switch on the right that is turned on. Below the title, there are two columns: 'KEY' and 'VALUE'. In the 'KEY' column, there is a text input field containing 'boxtabindex'. In the 'VALUE' column, there is a text input field containing '5'. To the right of the 'VALUE' field, there are two small circular buttons, one with a plus sign and one with a minus sign.

If instead, you wanted to remove the tabIndex and let the browser decide, you would use `boxtabindex: remove`:
