How to get the URL for a Digioh-hosted CSV

Last Modified on 06/24/2026 2:43 pm EDT

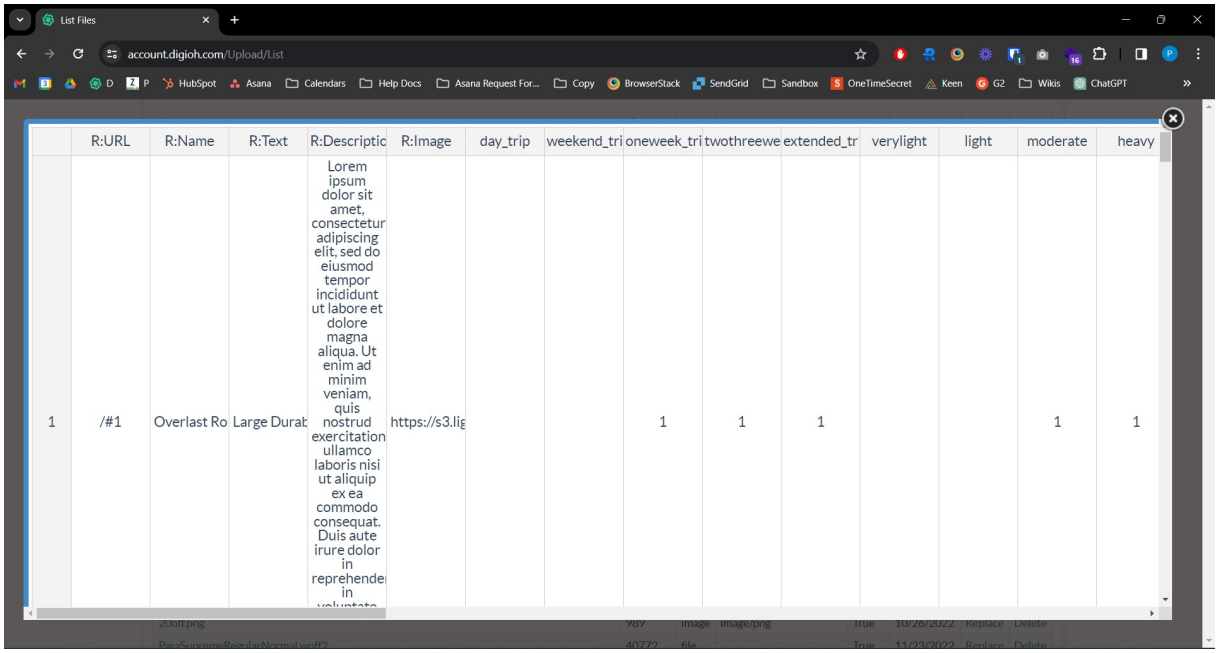

Sometimes when using Digioh, you may end up needing to use a .csv file that is uploaded to and hosted by Digioh - For example, if you're using the i18n App and can't use a Google Sheet. This page will guide you through the steps to retrieve the URL for the Digioh-hosted file.

1. Log in to Digioh and select Files:

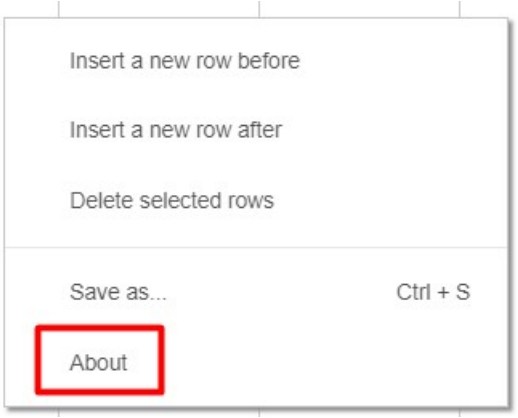

2. Locate the .csv file that you previously uploaded and click its name.

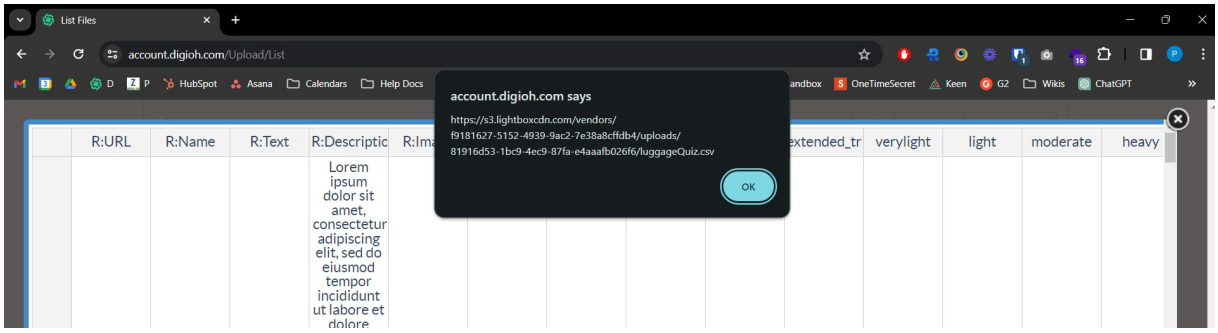

3. This will open the file in an editor within your browser:

4. You can then right-click within the editor and select About:

5. A pop-up will then appear with the full URL - You can then copy and paste this as needed!
