# How do I Create an API Key in Iterable?

Last Modified on 07/23/2026 3:14 pm EDT

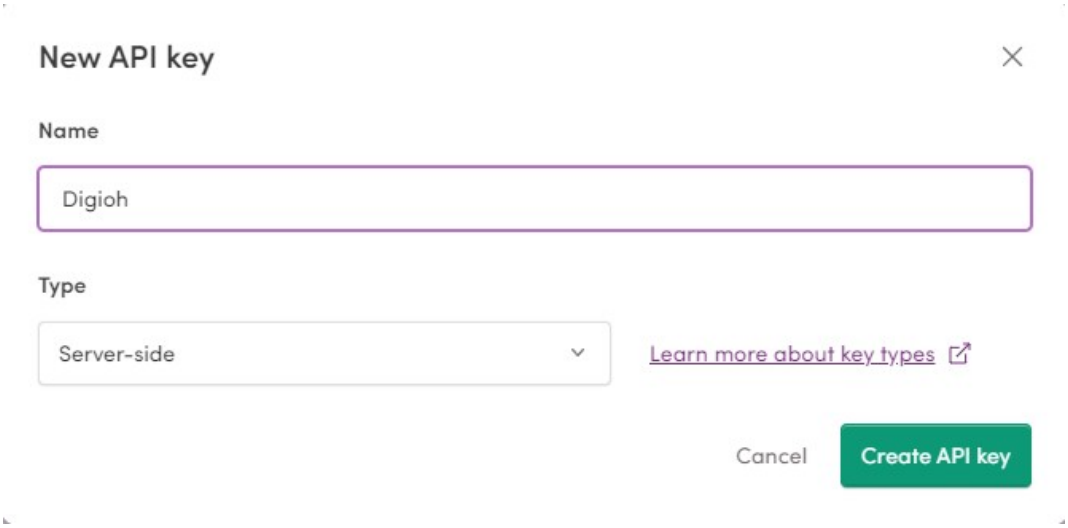

In your Iterable project, navigate to **Integrations > API Keys**. This screen lists information about each of the API keys that have been created for the project, but it does not display the full API keys.

From there, Click **New API Key**:

To integrate with Digioh, you'll need a **Server-Side API Key.** You should also provide a clear, recognizable name for the key:

Click 'Create API Key' and Iterable will generate and display the API key.

**Make sure to copy the key down immediately - Once you close the window in Iterable, you won't be able to see the key in its entirety again.**

Need a hand along the way? Reach out to support@digioh.com.
