

How to show in-campaign interactions with the Modal Campaign Overlays Extensions

Last Modified on 06/24/2026 2:49 pm EDT

You may not have enough space in your Campaign to show full T&Cs, and redirecting to another page on your site can hurt conversion, so ideally you show more information "inside" an existing Campaign experience.

The Digioh extension **Modal Campaign Overlays** supports popping a Campaign page as an overlay to an existing page. With this, you can show a lightbox within an existing campaign, to show T&Cs, or UX for any use case possible on a Campaign page. You can even chain these overlays on top of each other for advanced interactions. To install the app, in the Digioh HQ open the profile menu top right, go to "Custom JS (Apps)", then find and install "Modal Campaign Overlays".

Configuring Modal Overlays

To create an overlay, start by simply creating and designing a new Extra Page in your Campaign. Design the page however you like, the only limit is that it must not be any wider than the "parent" page that triggers it. If the content on the modal page is taller than the parent page, a scroll bar will be added.

This allows you to show lengthy text, but these modals are not limited to just text.

To trigger the modal, configure metadata **modal_overlay** : epX (replace X with the page number) on an element of your choice. Typically you would add this to a button, but all element types are supported. If using a button, you should set the Button Click Action to "Do Nothing", otherwise whatever action is set will interfere with showing the modal.

The image shows a design tool interface for a 'Main Page' and two 'Modal Overlay' windows. The 'Main Page' editor has tabs for 'Layout', 'Form', 'Buttons', 'Text', 'Images', and 'HTML'. The 'Buttons' tab is active, showing a button labeled 'Button 2 - Show me the small print >'. Below the button, there is a 'Display Mode' section with a toggle set to 'ON'. The 'Text' section shows the text 'Show me the small print >'. The 'Click Action' dropdown is set to 'Do Nothing'. The 'Element Metadata' table has the following data:

Key	Value
modal_overlay	ep1

The two 'Modal Overlay' windows are titled '274152: Modal Overlay'. Each window contains a form with an input field 'Enter your email address', a blue button 'Yes, Count Me In!', and a link 'Show me the small print >'. Red arrows point from the 'Do Nothing' click action and the 'modal_overlay' metadata value in the editor to the 'Show me the small print >' link in the modal windows.

The modal page needs a control to close the experience. Add a button, again with click action Do Nothing, and add metadata **modal_overlay_close** : 1 to indicate that it is a close control:

At ultrices mi tempus imperdiet nulla malesuada. Eu tincidunt tortor aliquam nulla. Curabitur vitae nunc sed velit dignissim sodales ut. Nunc non blandit massa enim nec.

That's it! You can chain modals on top of each other if needed, and they will close in the sequence that they were opened.
