

Hide page based on a date

Last Modified on 06/24/2026 3:03 pm EDT

In the Digioh editor, you can hide pages based on whether the user selects a date in the past or future. To do this, use the **Date-Based Button Control** extension.

First, add a Date Picker field to your form. Make sure the metadata configuration includes **date_field** set to **true**. Then, add a Select-type button, and set the metadata **checkbox_field** to **true**.

The screenshot displays two configuration panels in the Digioh editor. The top panel, titled 'Button Metadata', contains a table with two columns: 'KEY' and 'VALUE'. The 'KEY' column has the value 'checkbox_field' and the 'VALUE' column has the value 'true'. To the right of the table are two green circular icons with a plus and a minus sign. The bottom panel, titled 'Field Metadata', also contains a table with 'KEY' and 'VALUE' columns. The 'KEY' column has the value 'date_field' and the 'VALUE' column has the value 'true'. Similar to the top panel, it has two green circular icons with a plus and a minus sign to its right.

Although the checkbox field won't appear to the user, it controls the visibility of specific pages. Configure the page's branching logic. Set the rule to skip the page when the checkbox is selected or deselected, based on your criteria.

This setup allows you to prevent users from seeing certain pages if the date they select falls outside your defined range. For example, if the date is in the past and you only want future dates to be valid, the page will not appear.

The screenshot shows the 'Page Branches' configuration in the Digioh editor. It features a section for 'Branch 1' with a 'Delete' button. Below this, there is a dropdown menu labeled 'WHAT DO YOU WANT TO DO, JUMP OR SKIP?' with the option 'SKIP this page...'. Underneath, there are two dropdown menus: 'IF THE ANSWERS TO THE' with the value 'Baby Age' and 'CONTAINS' with the value 'All of These'. At the bottom, there is a 'CHOOSE ANSWERS' section with a text input field containing 'isDatePast (B6)' and a small 'x' icon. To the right of the input field are two green circular icons with a plus and a minus sign.

This setup ensures that a page remains hidden if the selected date doesn't match the desired range. For example, you can hide the page if the user picks a past date, allowing only future dates to be valid.
