The Campaign Scroller Extension

Last Modified on 06/24/2026 3:22 pm EDT

Make your Digioh campaigns scrollable when content is too tall for the screen.

Installation

1. Go to your Apps page in Digioh
2. Find and install the extension **Campaign Scroller**

Setup

After installation, you'll need to enable scrolling for each campaign where you want this feature:

1. Open the campaign you want to make scrollable
2. Go to the campaign settings
3. Add a new metadata entry:
    - Key: scrollable
    - Value: true

That's it! Your campaign will now automatically become scrollable when the content is taller than the visitor's screen.

Note: The campaign will remain centered on the screen, with a scrollbar appearing when needed.
