How To Use Quick Start Themes

Last Modified on 08/19/2026 9:09 am EDT

The benefit of Quick Start themes over our other themes is that they come with preset best practice conditions to take the guesswork out of how your campaign should display.

Getting to Quick Start Themes

1. In your Digioh Account, select **Create New Campaign**.
2. From the **Use Case** dropdown, select **Quick Start:**

In the theme gallery, filter by campaign type using the **Lightbox**, **Sidebar**, **Inline**, and **Banner** options at the top.

Building your campaign

Choose the theme closest to the experience you want to create. Everything is editable, so if the theme doesn't look exactly right, you can change it.

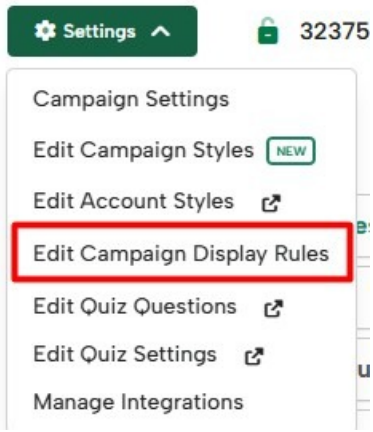

1. Select your theme and give it a name, it will open in the **Design Editor**.
2. Update the campaign to match your brand: adjust colors, fonts, images, and copy.
3. If the theme includes a **Mobile Breakpoint**, apply your changes there as well.

Display Rules

Quick Start themes include preset Display Rules built around best practices for their intended use. To review and adjust them:

1. Select **Edit Campaign Display Rules** from the **Settings** dropdown in the upper left of the

Design Editor:

2. Review and update the Display Rules to match your targeting and display goals.

Learn more about conditions here.

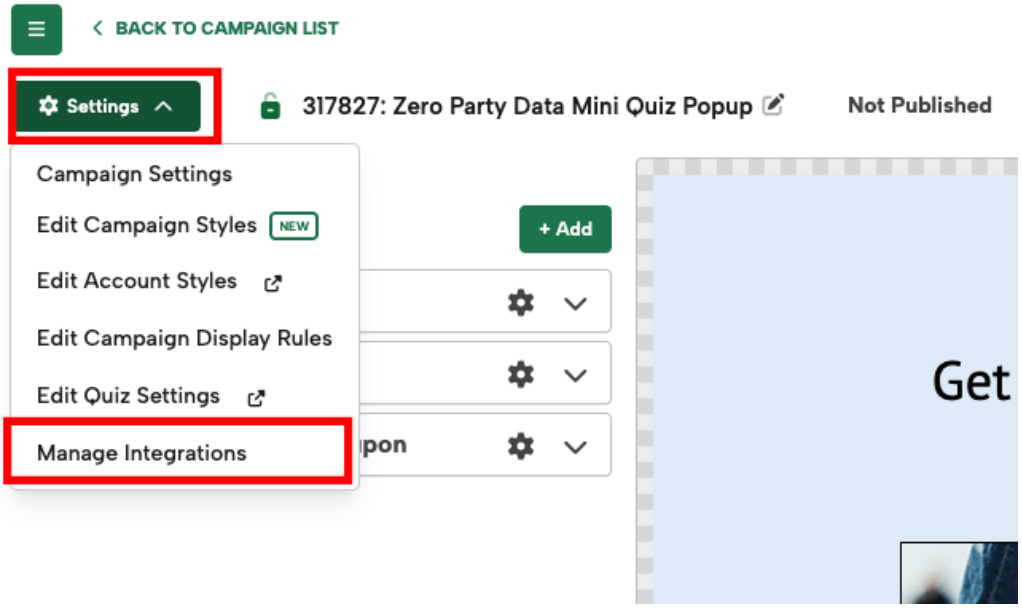

Integrations

Integrations

To pass submission data into your ESP, add an integration to the campaign.

If you already have an integration set up:

1. Select **Manage Integrations** from the **Settings** dropdown in the upper left of the **Design Editor**:

2. Select your integration from the dropdown and select **Add**. Multiple integrations can be added to a single campaign if needed.

If you still need to set up an integration, click here to learn more.

Publish and Launch

When you're ready to launch, remove the "Current Page URL contains Digioh_Remove_When_Ready_To_Launch" condition:

You can now select **Save and Publish** to save your changes and set your campaign live.

If you're not ready for your new campaign to be live, you can publish it from the **Campaign List** when you're ready:
