

What is the Difference Between Add and Remove Logic?

Last Modified on 07/23/2026 3:18 pm EDT

ADD

- The **ADD** logic is **read/write**. It reflects the current state of the user on page load.
 - Based on whether the checkbox is checked, it **adds** or **removes** the user from the given List or Message Type upon submission.
 - **ADD** is the recommended option for all checkboxes **besides** unsubscribeAll.
-

REMOVE

- The **REMOVE** logic does **nothing** on page load, as if it isn't present.
 - This option only **removes** the user from the List or Message Type upon submission.
-
