How to install Digioh in WooCommerce

Last Modified on 06/24/2026 3:51 pm EDT

WooCommerce is built on WordPress. This guide walks you through two reliable methods for installing Digioh: via the Digioh WordPress plugin or manual script embedding.

Prerequisites

- Access to your **WooCommerce WordPress Admin Panel**
- Access to your Digioh account

Option 1: Install Using the Digioh WordPress Plugin.

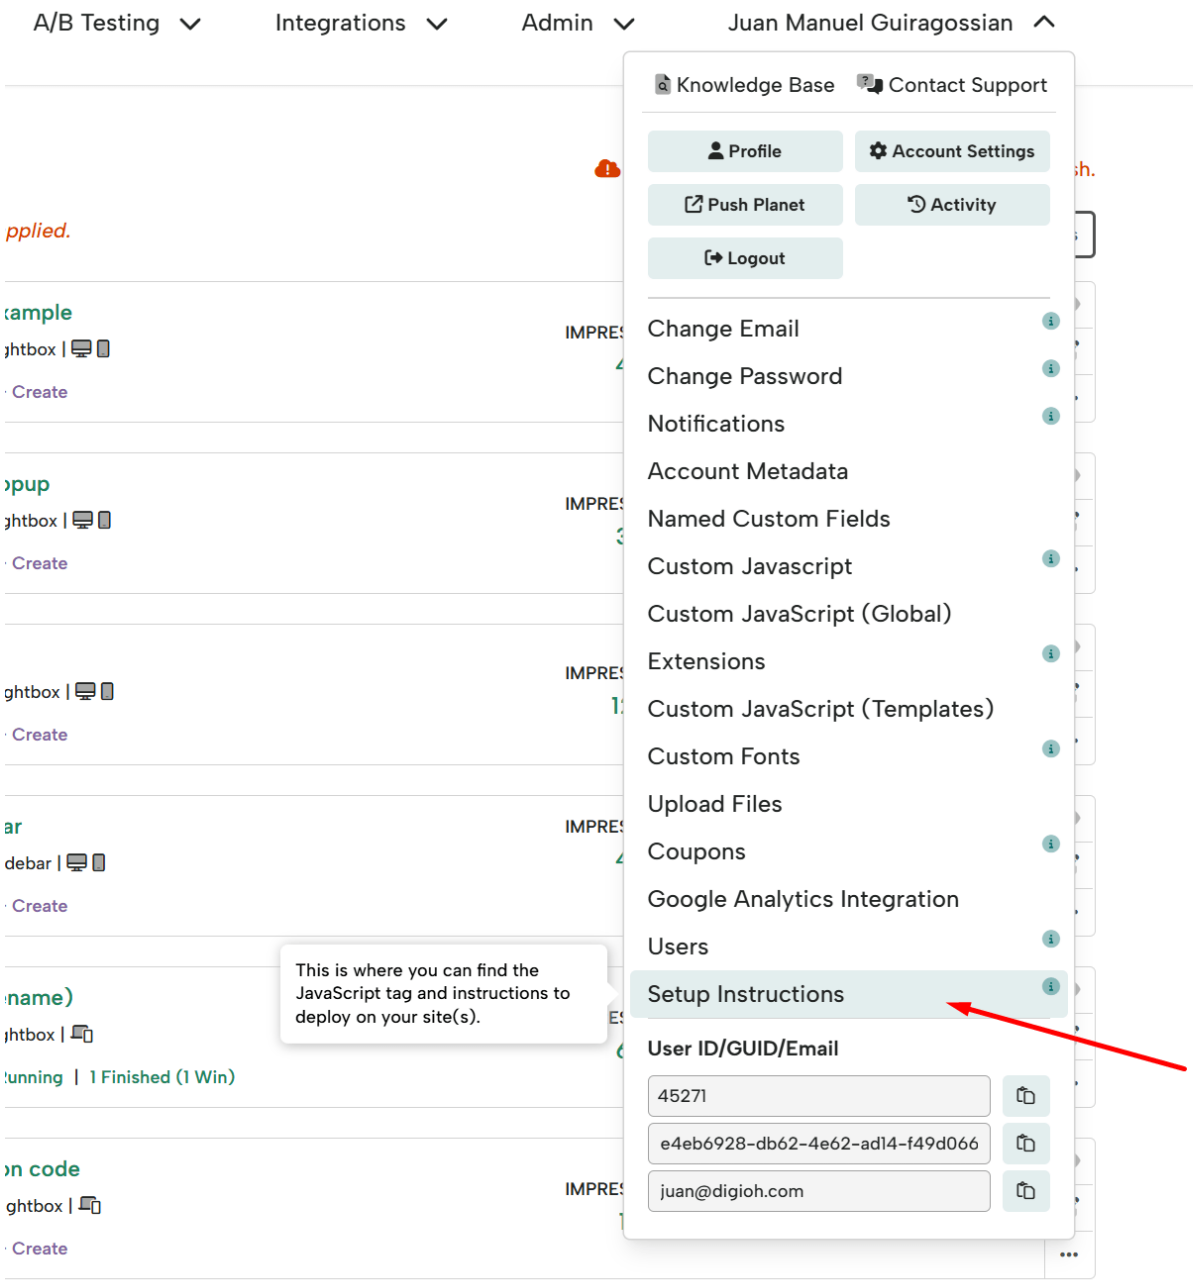

This method is simple and requires no code editing. Follow this guide.

Option 2: Manual Installation (editing the code)

This method is ideal if you want full control over script placement or aren't using the plugin.

Steps:

1. **From your WordPress Admin**, navigate to **Appearance > Theme File Editor** .
2. Open your current theme's **header.php**.
3. Paste the **Fast Activation JS Snippet** from Digioh (obtain it here). It's under "setup instructions:

4. Paste it right before the **</head>** tag.

5. **Save** the changes and verify the installation by calling "DIGIOH_API" from the browser's console.
