

How to connect your quiz with your product feed

Last Modified on 06/25/2026 9:19 am EDT

Once you've built your quiz, you'll want to make sure you're connected and pulling your products. To connect your product feed, follow these steps:

1. Go to the Quiz Settings, you have two ways of accessing them:
 - a. From the campaigns list: Hover over the three dots at the bottom right corner of the campaign, and select "Quiz Settings".

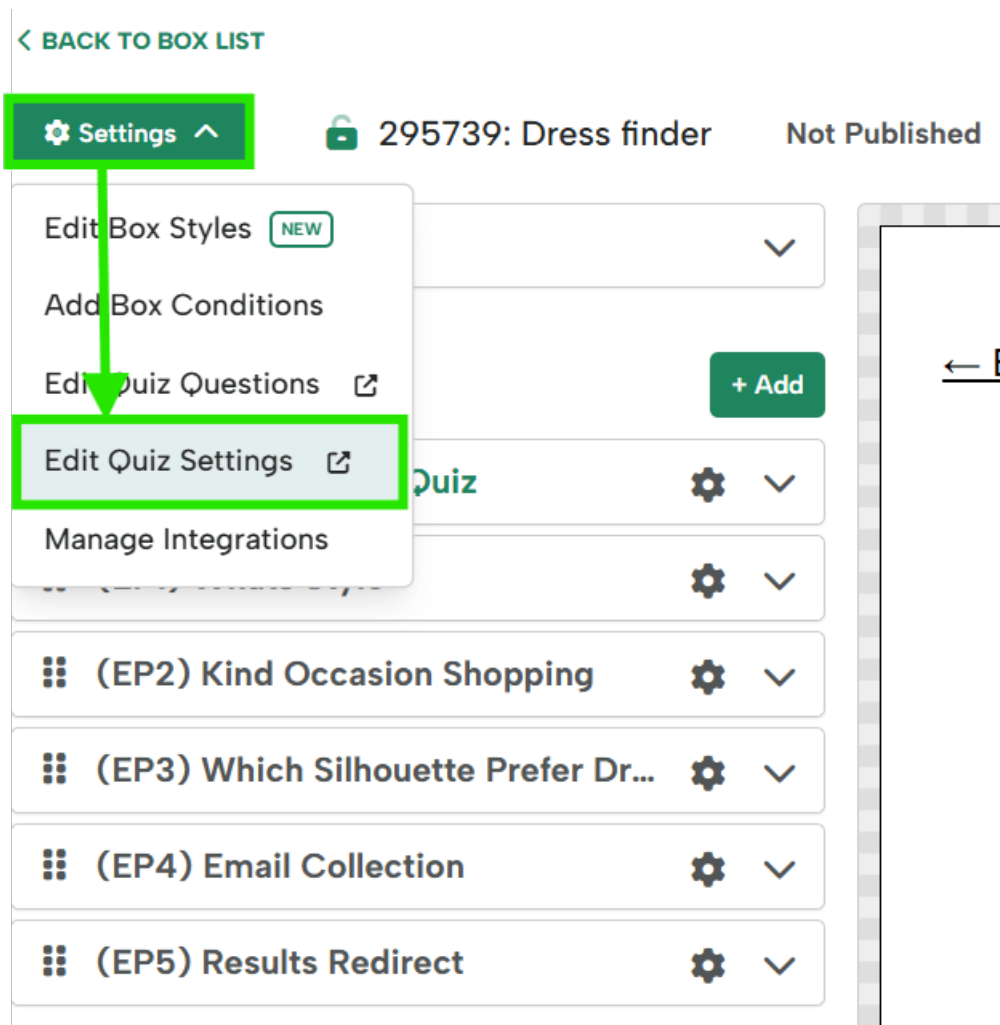

Current Boxes

The screenshot shows a list of campaigns under the heading "Current Boxes". At the top left, there is a "Filters 7" button. At the top right, there is a "Reorder Boxes" button. The list contains three campaigns:

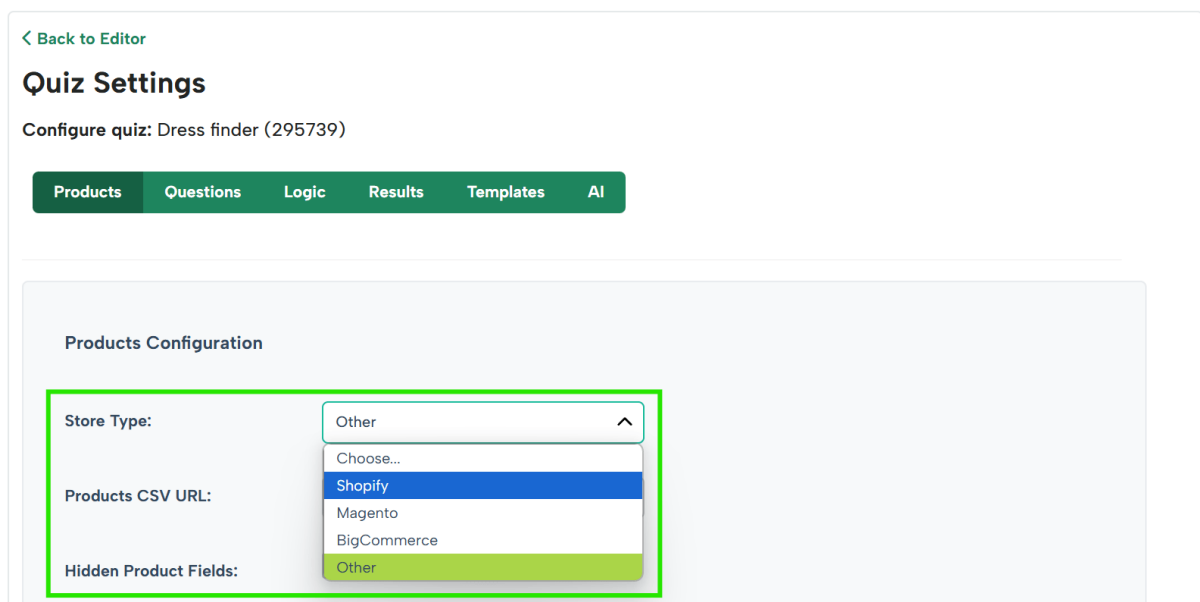

- Dress finder**: ID# 295739 | Inline | Quiz | [edit icon] [share icon] [info icon]. A/B TESTS: + Create
- Skincare Quiz**: ID# 287244 | Inline | Quiz | [edit icon] [share icon] [info icon]. IMPRESSIONS: 4. A/B TESTS: + Create
- Countdown pop-up**: ID# 277694 | Sidebar | [edit icon] [share icon] [info icon]. IMPRESSIONS: 2. A/B TESTS: + Create

A context menu is open for the "Skincare Quiz" campaign, showing options: Conditions, Integrations (0), Enable Revenue Attribution (with a green arrow pointing to it), Quiz Settings (highlighted with a green box), Quiz Builder, Duplicate, Archive, and Add Dynamic Items. A "Reorder Boxes" button is also visible at the top right of the interface.

- b. From the campaign editor: Click on Settings at the top left corner and select "Quiz Settings":

2. On the Quiz Settings page, go to the products tab and change the Store type:

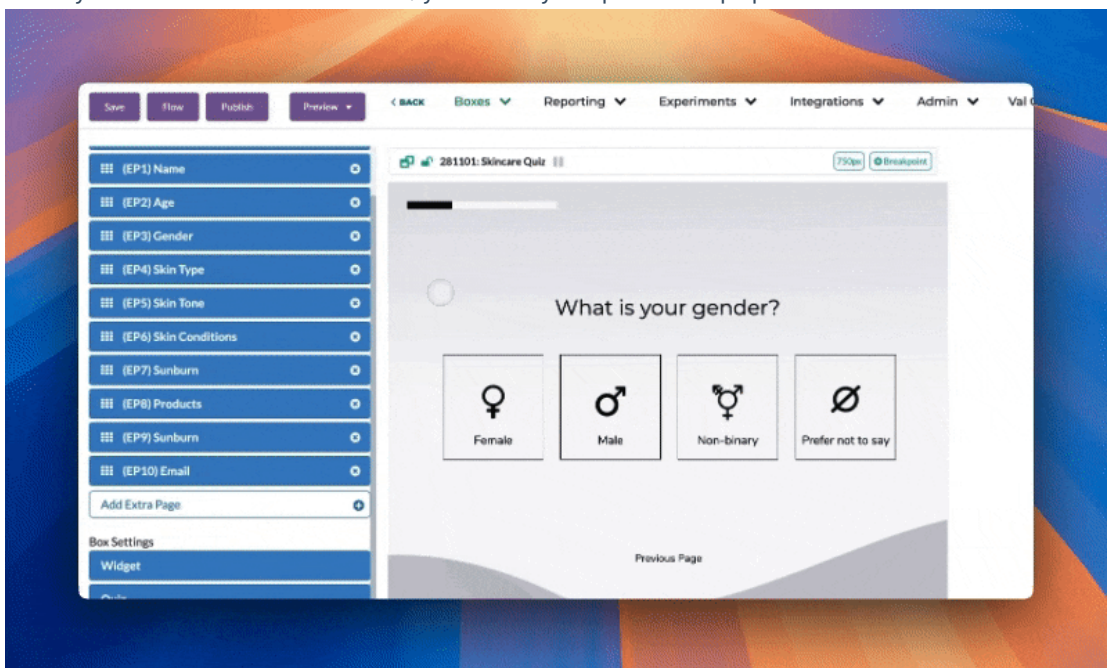

3. For Shopify stores, simply add the Shopify Store Domain, select the Product Type, and delete the Products CSV URL.

- a. If you don't know the myShopify URL, you can find it in the HTML Source of the Shopify site. If you are in Chrome, click on "View" -> "Developer" -> "View Source" and then search for

```
“myShopify”.
view-source:https://wearpinsy.com
myshopify
1 <!doctype html>
2 <html
3   class="no-js"
4   lang="en"
5   style="--announcement-height: 1px;"
6 >
7 <head>
8   <!-- Begin: Northbeam pixel -->
9   <!-- prettier-ignore -->
10  <script>var r;(n=r||{}).A="identify",n.B="trackPageView",n.C="fireEmailCaptureEvent",n.D="fireCustomGoal",n.E="firePurchaseEvent";var n="//j.northbeam.io/ota-s
11  <!-- End: Northbeam pixel -->
12
13  <script>
14  window.KiwiSizing = window.KiwiSizing || {}; window.KiwiSizing;
15  KiwiSizing.shop = "pinsy-shapewear.myshopify.com";
16
17
18  </script>
19  <meta charset="UTF-8">
```

- b. For the type of products, select the ones you want to recommend based on how they are categorized in your Shopify store (for example “Products”, “Variants” or “Collections”). If you don’t know, just select “Products” for now, this can easily be modified later.
- c. Once your store domain is added, you’ll see your products populate below.

- 4. For non-Shopify stores, you’ll need to export your store feed and replace the URL (A placeholder is here already, so you must replace this with your own store). Follow [this documentation](#) on how to set up a custom product feed.
- 5. Click “Save” and “Refresh Product Data” for your latest product feed to be pulled.

And that’s it! You’ve successfully connected your quiz to your product feed. You can now move into [Setting Up Quiz Logic](#).
