How to install the Digioh Shopify app

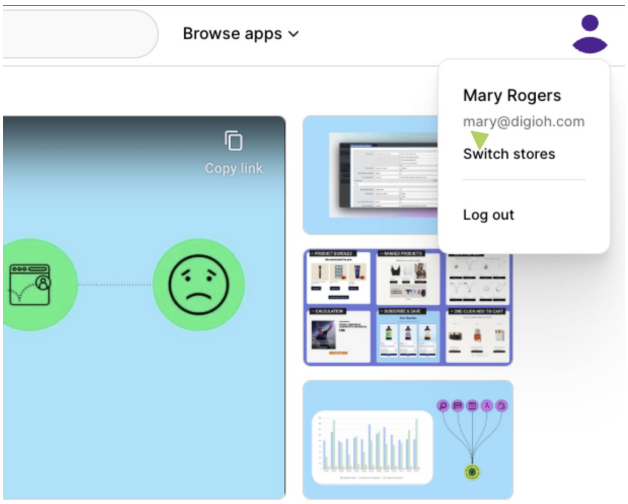

Last Modified on 06/25/2026 9:14 am EDT

With the Digioh Shopify app, you no longer need to paste a JavaScript snippet into your theme. Install the app once and Digioh.js stays in place, even when you publish a new theme.

Step 1: Access the Digioh app and confirm your Shopify account

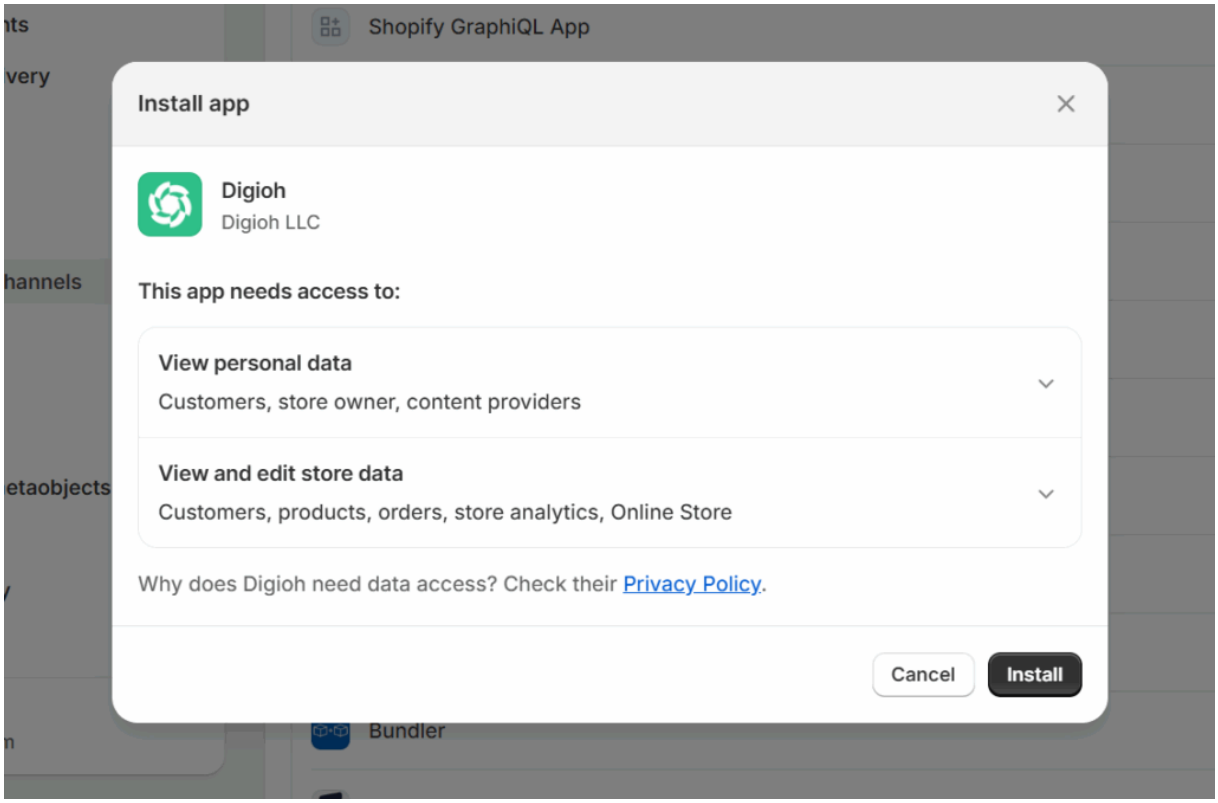

Open the Digioh app in the Shopify App Store: https://apps.shopify.com/digioh.

On the app page, confirm you're signed into the correct Shopify store. Click your profile icon in the top-right corner of the Shopify admin to check.

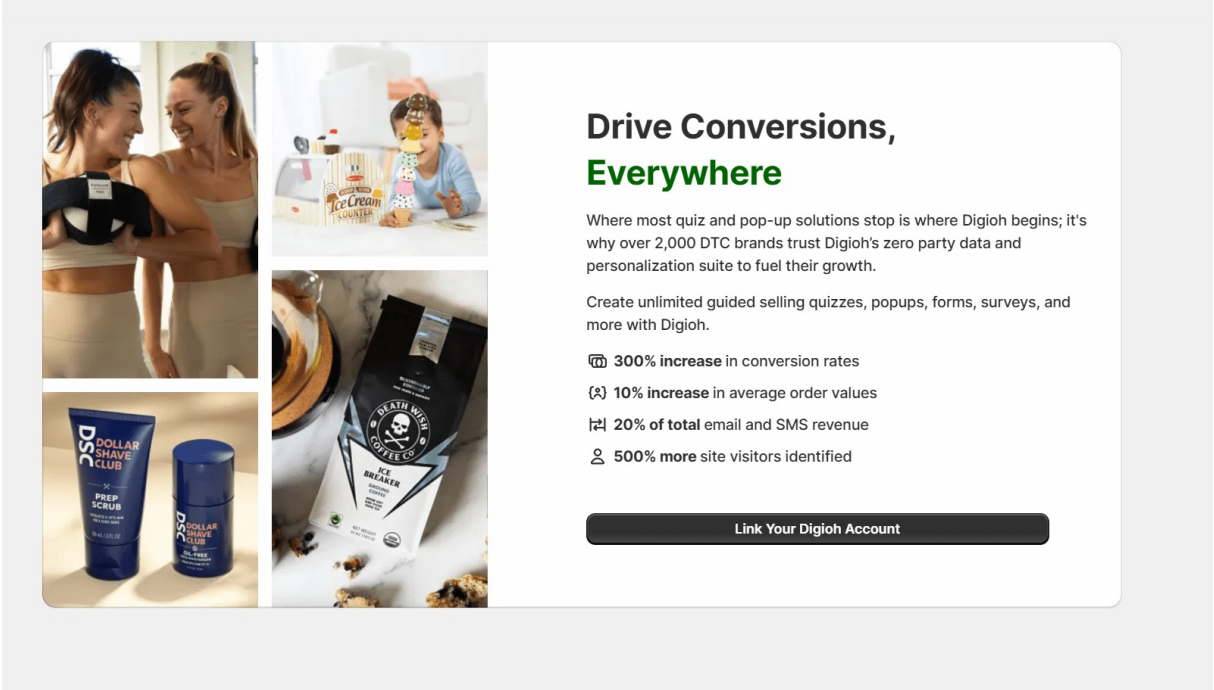

Step 2: Install and connect your Digioh account

1. Once you've confirmed you're in the right store, click **Install:**

2. Shopify opens a new page that asks you to connect your Digioh account.
3. Click **Install** again. A second modal opens so you can link your Digioh account:

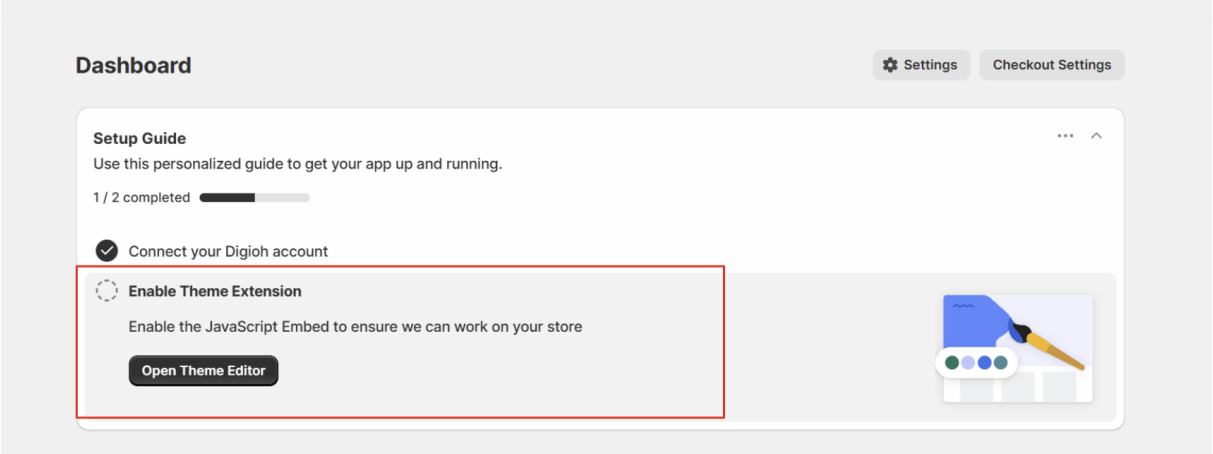

Note: Before clicking **Link**, make sure you're signed into the correct Digioh workspace in another browser tab.

Step 3: Add a custom CNAME for Digioh

Set up a custom CNAME using the steps in How to add a custom CNAME for Digioh.

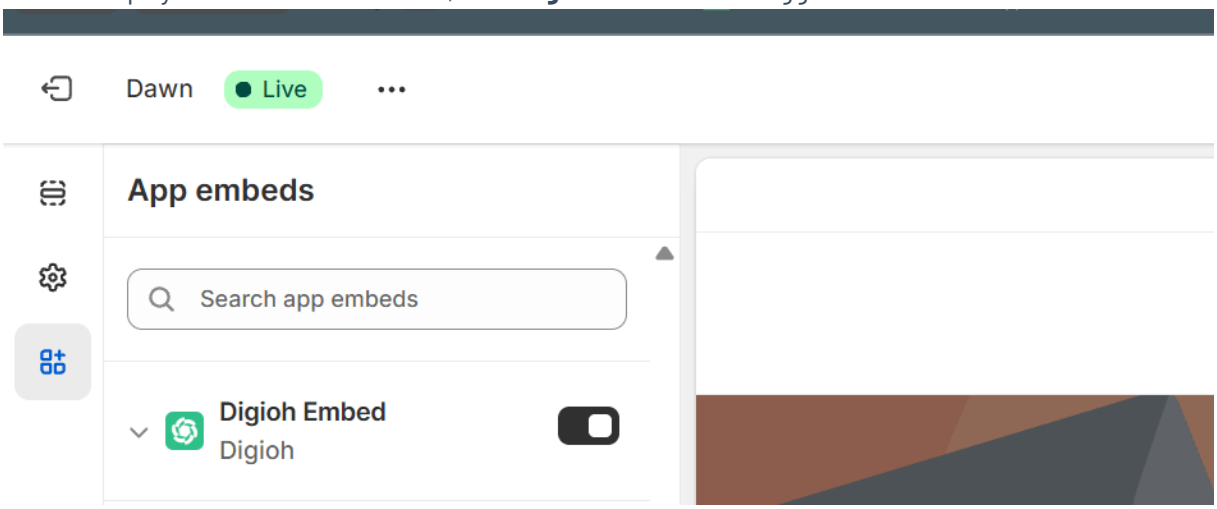

Step 4: Enable Digioh.js on your live theme

1. In the app dashboard, click **Enable Theme Extension**:

2. Click **Open Theme Editor**.

3. In the Shopify Theme Editor sidebar, find **Digioh Embed** and toggle it **On:**

4. Click **Save** in the theme editor.

5. After saving, you'll see the Digioh script load on your live store:

Important: If you previously added Digioh.js to your theme's <head> manually, remove that snippet now to avoid loading the script twice.

Why this matters

- Digioh's JS stays attached to your live theme automatically.
- If you publish or switch to a new theme, the **Digioh Embed** toggle is your reminder to turn it on, eliminating lost campaigns or quizzes after theme updates.

FAQs and troubleshooting

- **My campaign isn't firing.**
  - Confirm Digioh.js is toggled on in the Theme Editor.
  - Make sure you've removed any old manual snippet.
  - Test in a private or incognito window using a test campaign that uses a **Current Page URL Contains ?DIGIOH_TEST** display rule.
- **What about my post-checkout survey setup?** You configure surveys from the same app dashboard under **Checkout Settings**. No spreadsheets or manual webhook steps required.

That's it, Digioh.js is now wired into your Shopify store and will stay in place across theme changes!
