How to Add a Solid Color Block to a Campaign

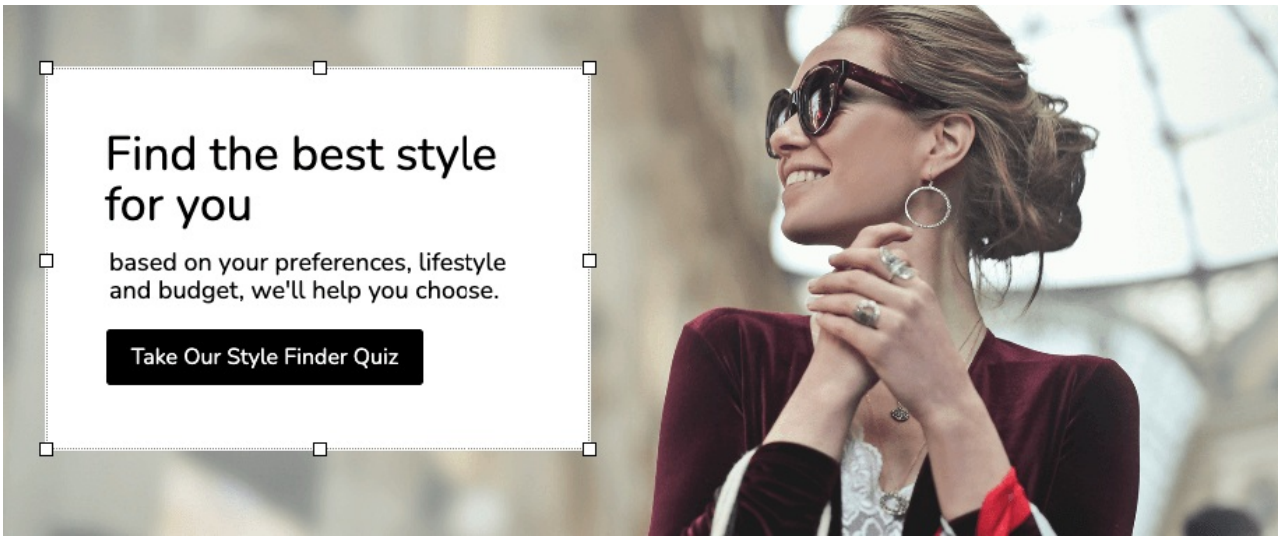

Last Modified on 06/11/2026 10:07 am EDT

What You'll Learn

A solid color block can be a good way to visually organize content inside a Digioh campaign. You can use it to:

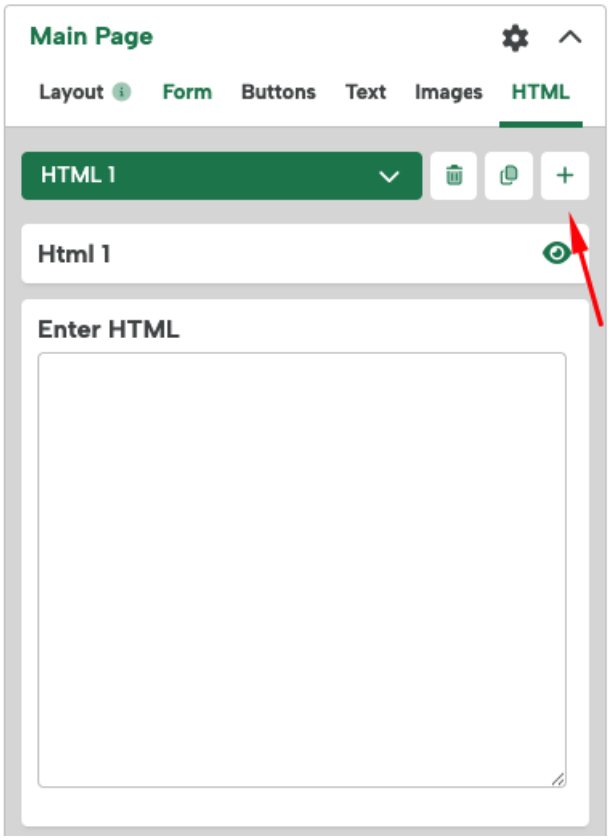

- Create section breaks or up panels
- Add contrast behind text or forms
- Highlight specific content with a branded background
- Simulate a full-width row or callout area

Instead of relying on image backgrounds to include these sections, you can insert a **blank HTML element** with custom styling. This method gives you full control over size, placement, and design — and it works with any layout type. Follow the steps below to easily create one.

1. Add a Blank HTML Element

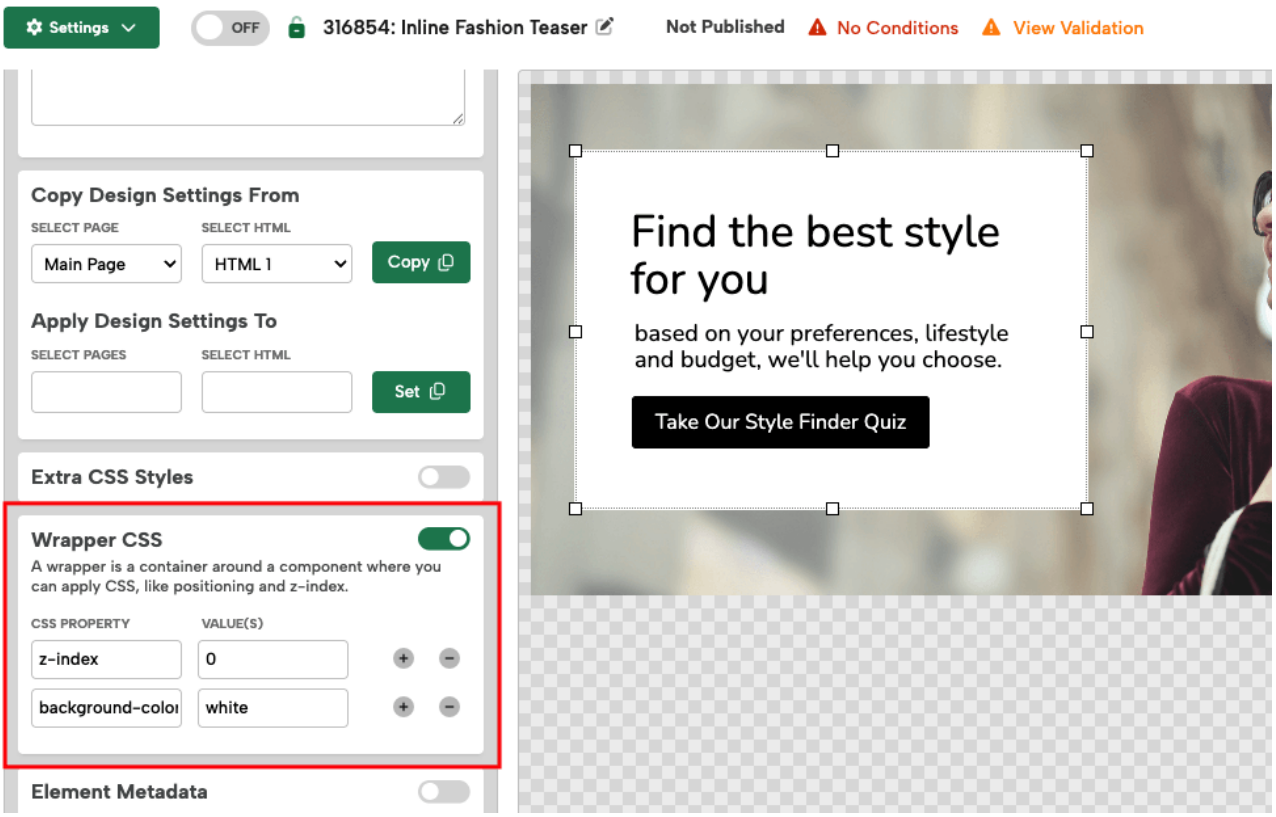

In the Digioh editor, create a new **HTML element** in the HTML tab on your Step/Page. Remove any content in the HTML input and leave it blank — we'll set the styling in another section.

2. Add Background Styling in Wrapper CSS

With the blank HTML element open, add this CSS in the **Wrapper CSS** section:

z-index : 0 *(this will ensure your color block can sit behind any other element)*
background-color : white *(you can change "white" to any color or hex code you need)*

3. Resize and Position the Element

Use the **drag-and-drop handles** to stretch or move the HTML block where you want it. It can serve as a background banner, section block, or panel.

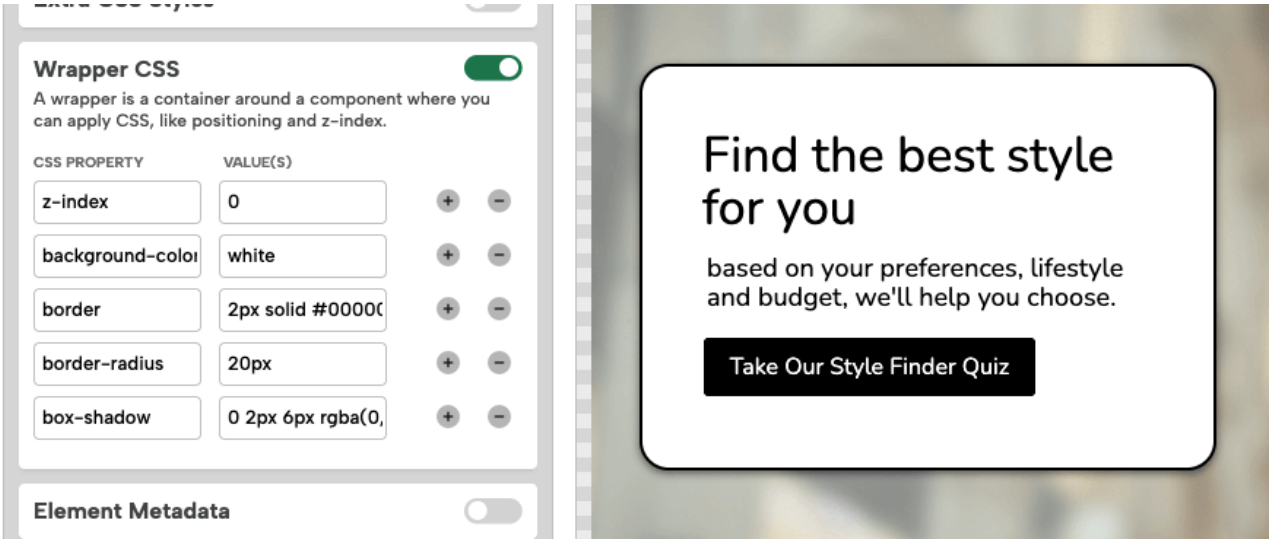

Optional Styling

To enhance the look of your color block, you can add more styles to the Wrapper CSS as needed. Here are a few examples:

Add a border: **border : 2px solid #000000**

Round the corners: **border-radius : 8px**

Add a drop shadow: **box-shadow : 0 2px 6px rgba(0, 0, 0, 0.5)**

If you're using this color block on a full-width campaign (e.g. a Banner or edge to edge Inline), you may want it to also go full width. To do that, you can also add this code to the Wrapper CSS:

Left : 0

Width : 100%
