

Render a Campaign Background Image as "half page"

Last Modified on 06/24/2026 5:28 pm EDT

The Digioh Campaign Editor supports a variety of options for background images, and background images can automatically scale based on the size of campaign. This is especially useful when using edge-to-edge or responsive scaling display modes. However, a common use case that is not directly supported in the Campaign Editor is positioning the background image to take up half of the page. For that, we have an App: "**Half Page Background Image Left or Right**".

From the Digioh HQ profile menu top right, select "Custom JS (Apps)", then find and install it.

To configure it, set **page-level metadata** with command key **half_image** and value **left** or **right**.

While the background image is still shown in the Campaign Editor as full page, when the Campaign is displayed the background will shift to 50% left or right, as shown below.
