How to Build Multiple Results Pages for a Digioh Quiz

Last Modified on 06/24/2026 4:18 pm EDT

Multiple Results Pages is currently in Beta and is not enabled for all accounts. If you'd like access to this feature, please reach out to our support team with the number of results pages you need at support@digioh.com, and we'll be happy to activate it for you.

Overview

Multiple Results Pages allow you to create different results page experiences for different quiz outcomes. Instead of sending every quiz participant to the same results page, you can tailor:

- Header and footer
- Number of products displayed
- Calls-to-action (CTAs) and button options
- Colors and styling

Each quiz outcome can be assigned its own unique results page, creating a more personalized and conversion-focused experience.

When Should You Use Multiple Results Pages?

This feature is ideal when you want to:

- Customize the header and footer copy to the outcome they had.
- Show different designs based on quiz answers
- Change CTAs depending on user intent
- Highlight different product groupings per outcome
- Personalize the results experience without building separate quizzes

Feature Requirements & Limitations

Before getting started, keep the following in mind:

- Quiz logic mode must be set to **Outcomes**
  - Multiple Results Pages are not supported for quizzes using **Weights** logic.
- The number of result pages you can create depends on your account's enabled limit. Reach out to support@digioh.com if you'd like to increase your limit.

Enabling Multiple Results Pages

Multiple Results Pages must be enabled on your account before they appear in the quiz editor.

Once enabled:

- You'll see a Results Pages sidebar inside the quiz Results tab in the Quiz Settings page.

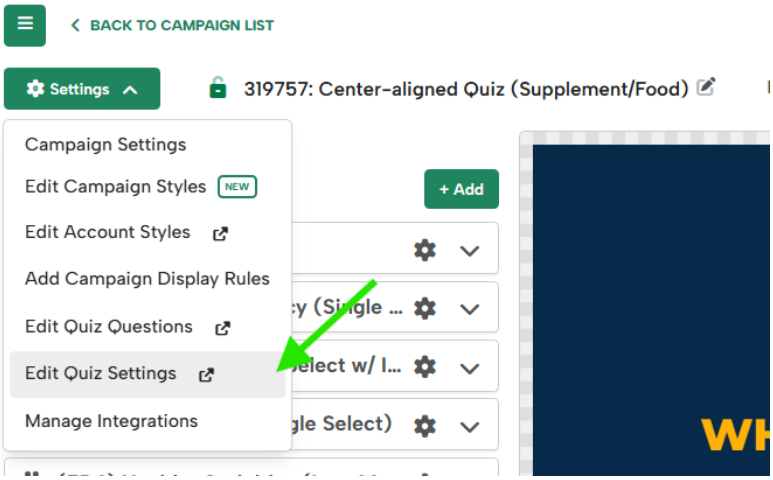

- You'll be able to add and manage multiple result pages for a single quiz.

If you don't see these options, your account may not yet have access. Contact support@digioh.com to request enablement.

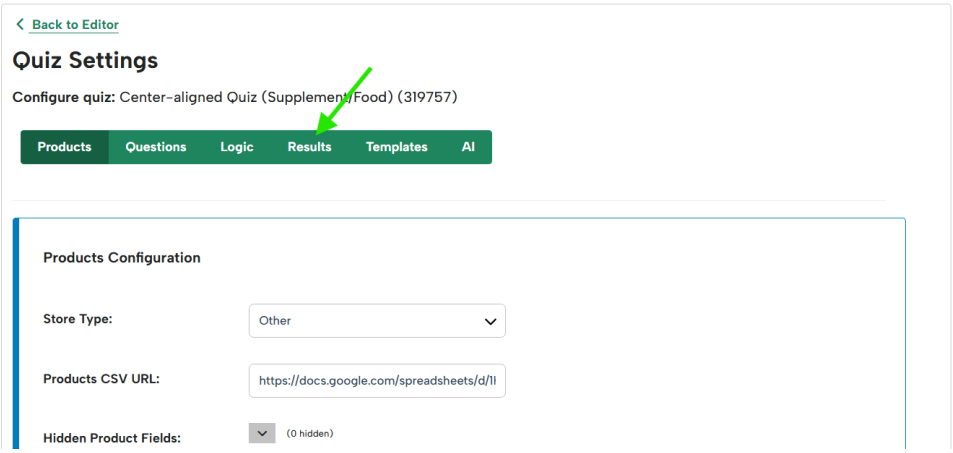

Creating Multiple Results Pages

Step 1: Open Your Quiz's Result Page Settings

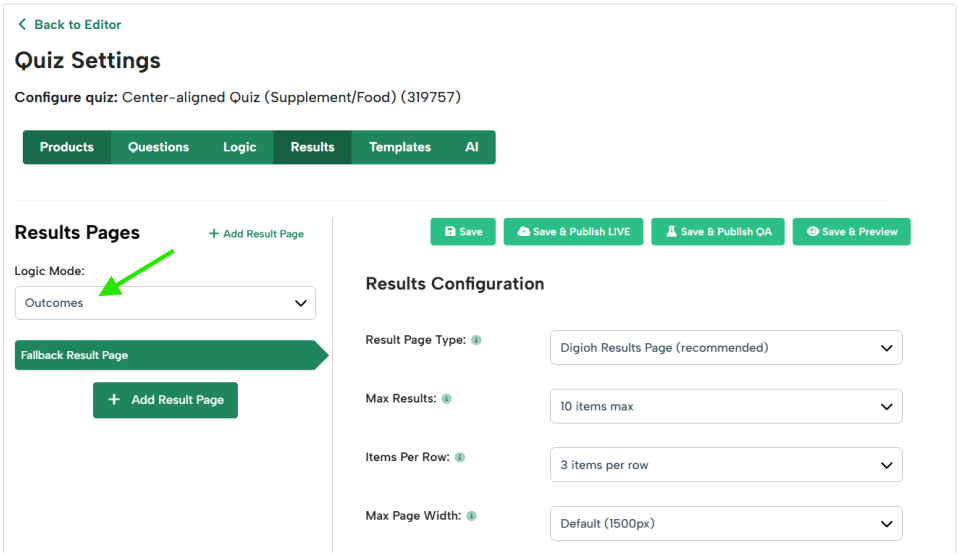

1. Open your quiz in Digioh.
2. Go to **Settings** > **Edit Quiz Settings**.

3. Click the **Results** tab.

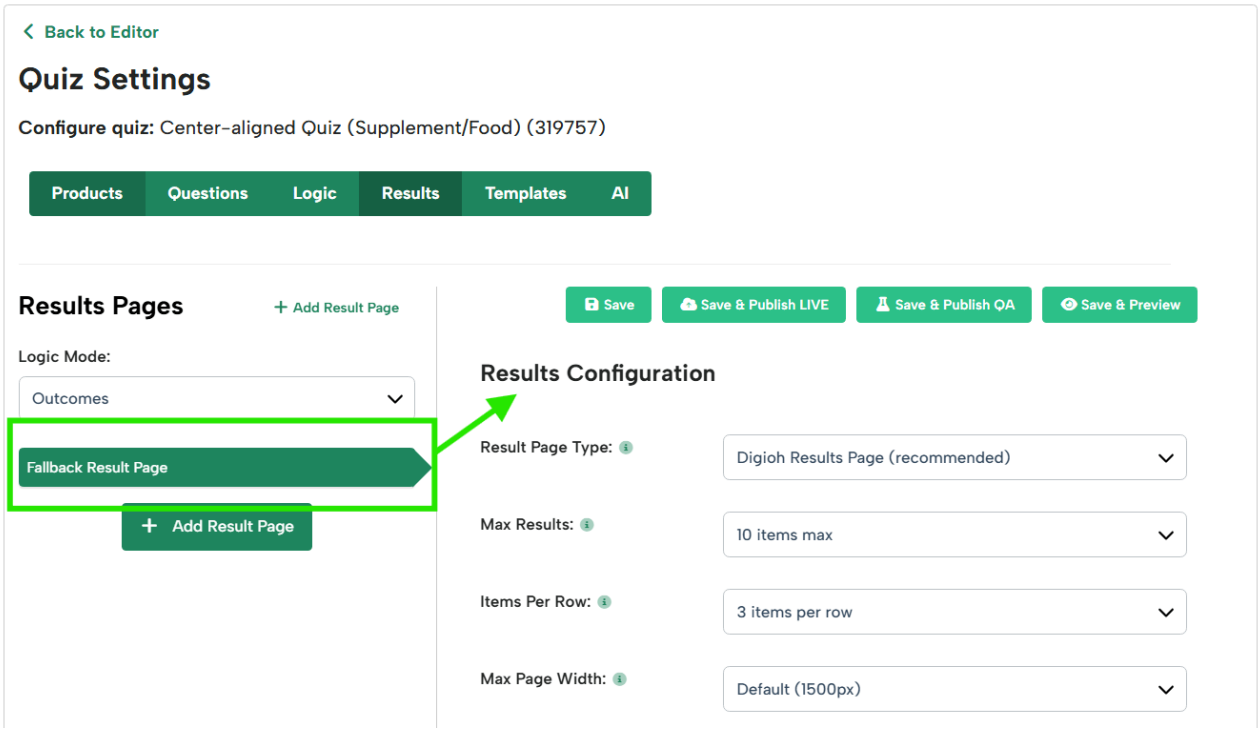

4. Confirm the **Logic Mode** dropdown is set to **Outcomes**.

Step 2: Design the Fallback Result Page

When you open the Results tab, the first result page you'll see is the **Fallback Result Page**.

- The fallback result page is shown when **no other result page is assigned** to a quiz outcome.
- This page also serves as the **starting template** for newly created result pages.

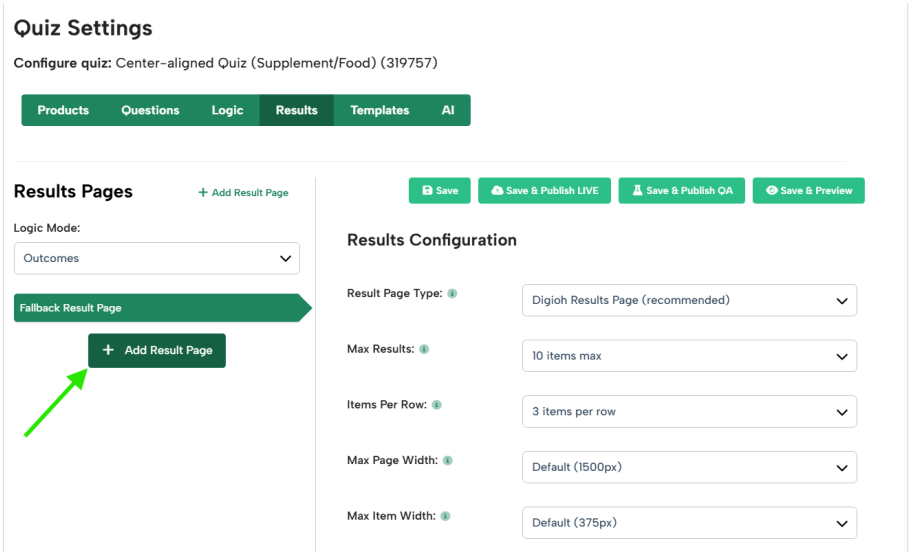

We recommend fully designing and styling the fallback result page first. When you add additional result pages, you can **duplicate them from the fallback page** , allowing you to make adjustments rather than starting from scratch each time.

To design the fallback page, follow our existing results page setup guide: *Setting Up a Digioh Results Page*

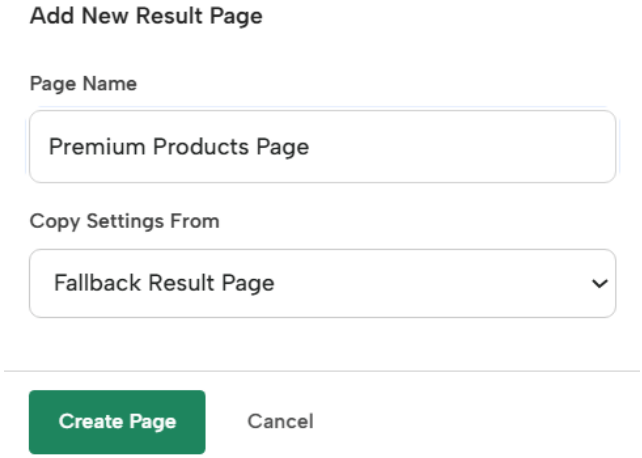

Once you have designed and set up your fallback results page, click **Save**.

Step 3: Add a New Result Page

1. In the Results Pages sidebar, click **+ Add Result Page**.

2. Name your page and select from which results page you want to copy the settings. If this is your first page, the only option will be the fallback results page. Once done, click **Create Page**.

3. A new result page will appear in the sidebar list, which is an exact duplicate of the page you selected, including layout, styling, and settings.

4. Select the new result page and adjust its configuration as needed. Depending on your setup, you can customize options such as:
    a. Maximum number of products displayed
    b. Products per row
    c. Button text and button actions
    d. Add-to-cart vs view product behavior
    e. Product descriptions visibility
    f. Colors and styling

g. Hero product

h. Header and footer

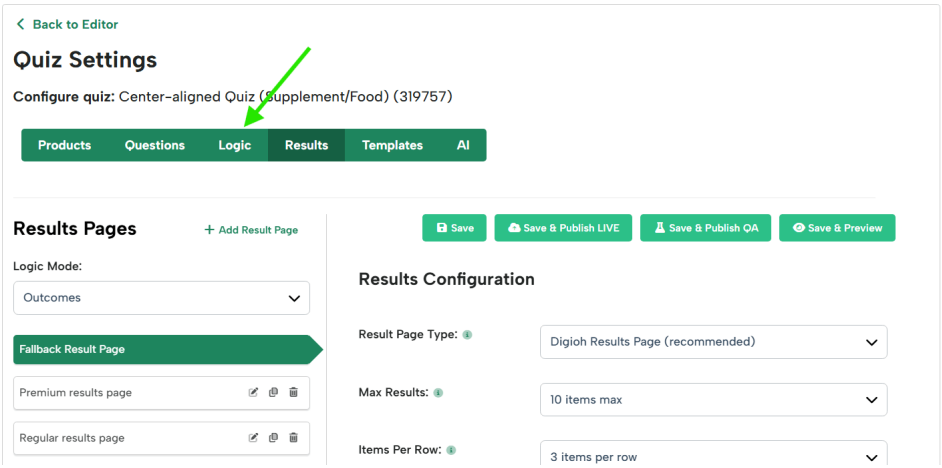

5. Once done updating your new results page, make sure to click **Save**.
6. Repeat this step to add additional result pages, up to your account limit.

Assigning Result Pages to Quiz Outcomes

Once you've created all your result pages, you can assign them to specific outcomes.

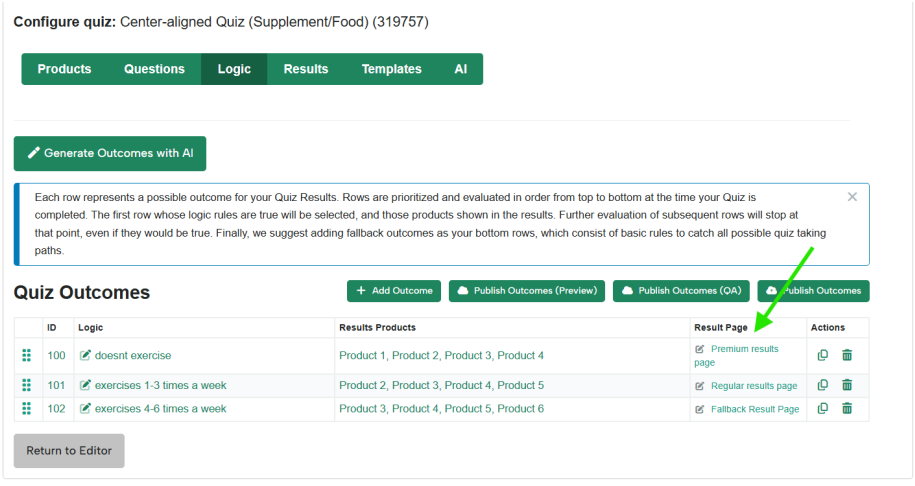

Step 1: Open Quiz Logic

1. Go to **Quiz Settings**.
2. Click the **Logic** tab.

Step 2: Assign a Result Page to Each Outcome

1. In the Outcomes table, locate the **Result Page** column.
2. Click the result page selector for an outcome.

3. Choose the result page you want associated with that outcome and click **Save**.

Each outcome can point to a different result page, allowing users to see a tailored experience based on their answers.

Default (Fallback) Result Page

Your quiz will always include a fallback result page.

- This page is shown if no specific result page is assigned to an outcome.
- It acts as the standard results experience.
- You can customize it just like any other result page.

Testing Your Results Pages

To test Multiple Results Pages:

1. Assign different result pages to different outcomes.
2. Make sure to click **Publish (Preview)** from both the Logic and Results tabs.
3. Preview your quiz and intentionally trigger specific outcomes.
4. Confirm:
    - The correct result page displays
    - Styling and products match the selected page
    - CTAs and actions behave as expected

Frequently Asked Questions

Can I use this with Weight-based quizzes?

No. Multiple Results Pages are only available for quizzes using Outcomes logic.

Can different result pages have completely different designs?

Yes. Each result page can have its own layout, styling, product configuration, and CTAs.

Is there a limit to how many result pages I can create?

Yes. The number of result pages is controlled at the account level. Contact support if you need to increase your limit.

Need Access or Help?

This feature is still in Beta and must be enabled on your account. Reach out to support@digioh.com if

you’d like access or need help setting up Multiple Results Pages.
