How to Install Digioh on a Magento Site

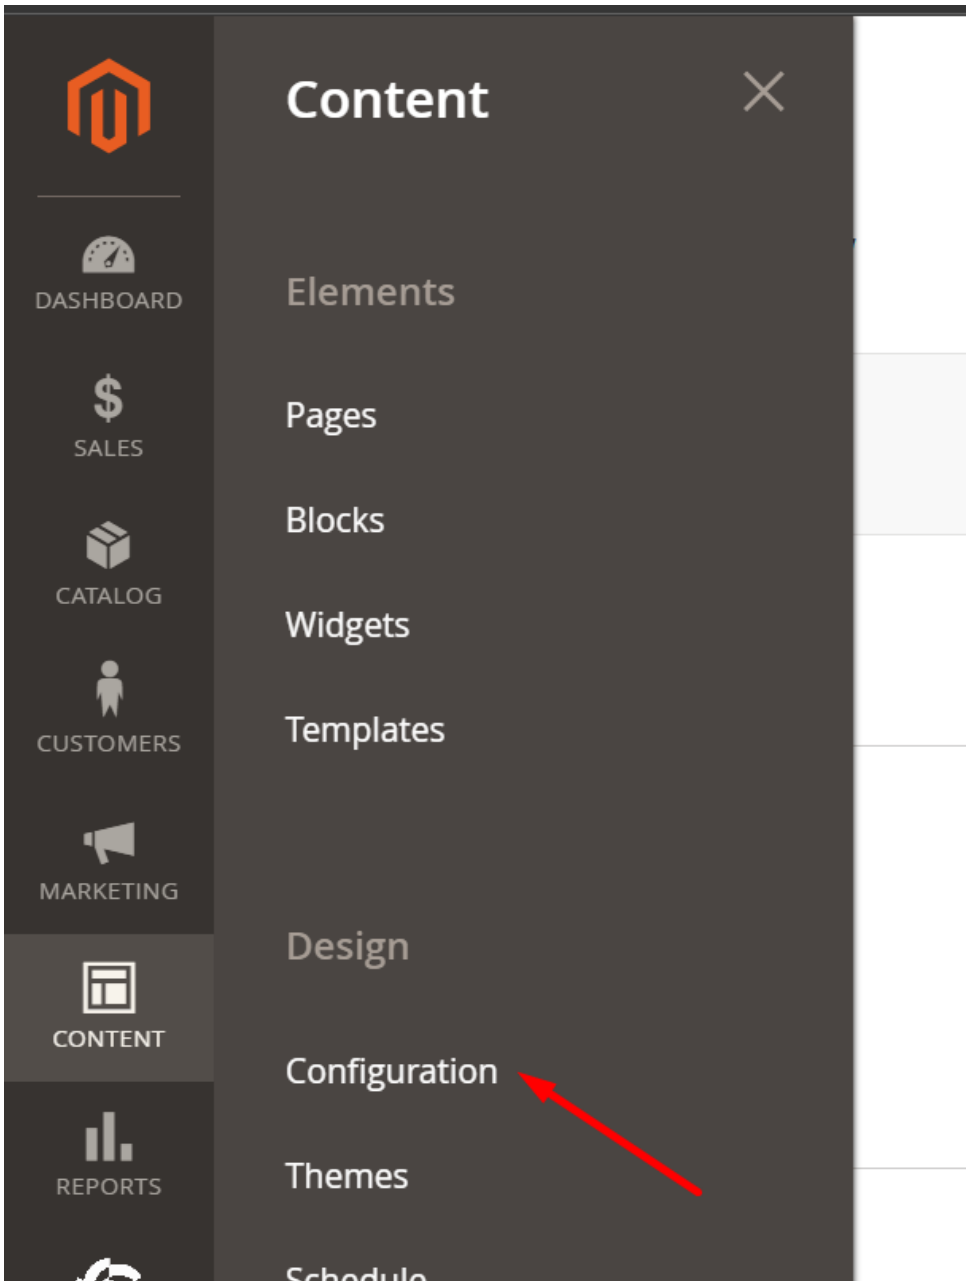

Last Modified on 06/10/2026 11:04 pm EDT

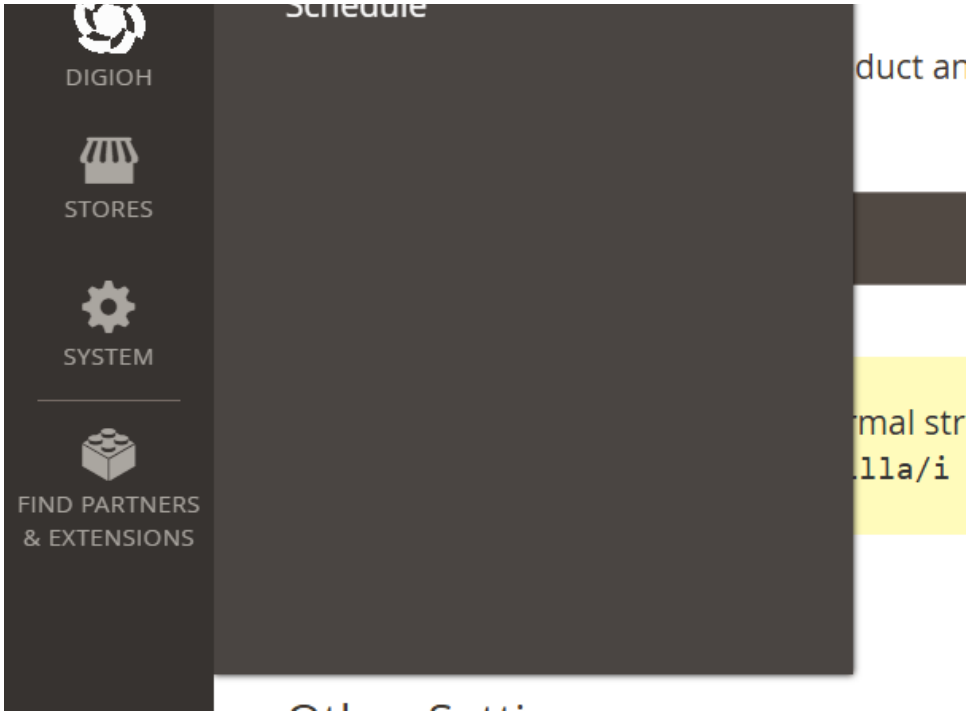

This guide walks you through installing Digioh's JavaScript on your Magento site to enable pop-ups, pop-ups, banners, quizzes, and other on-site widgets.

Step 1: Access the Magento Admin Panel

1. Log into your Magento admin panel.

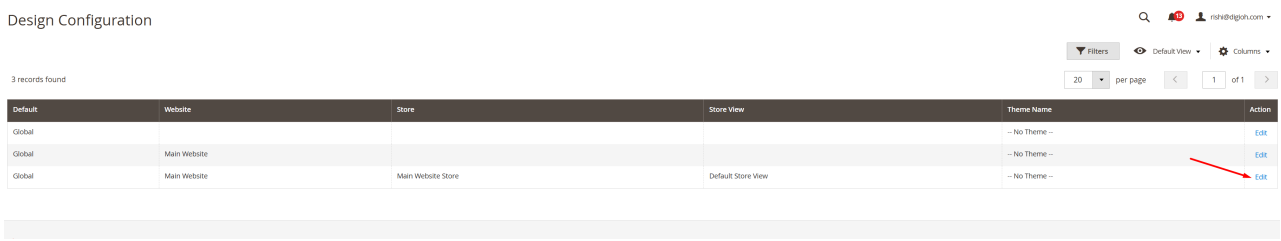

2. Go to:
   Content → Design → Configuration

Step 2: Choose the Store View

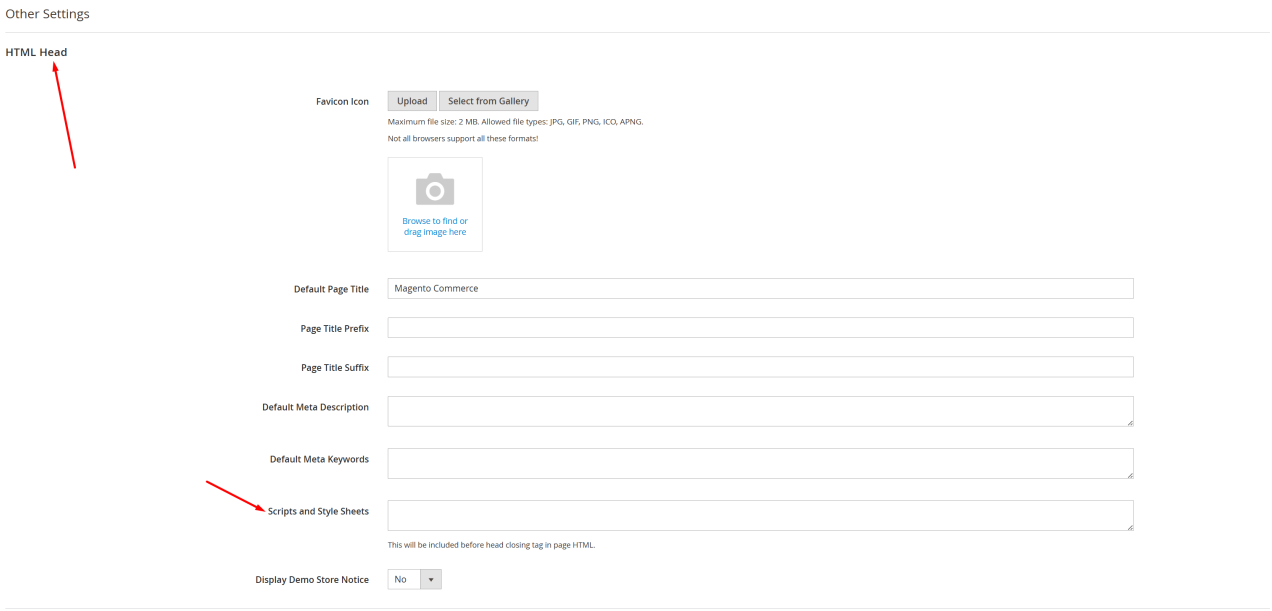

1. Identify the store view you want to update (e.g., your main website).
2. Click **Edit** in the appropriate row.

Step 3: Insert the Digioh JavaScript

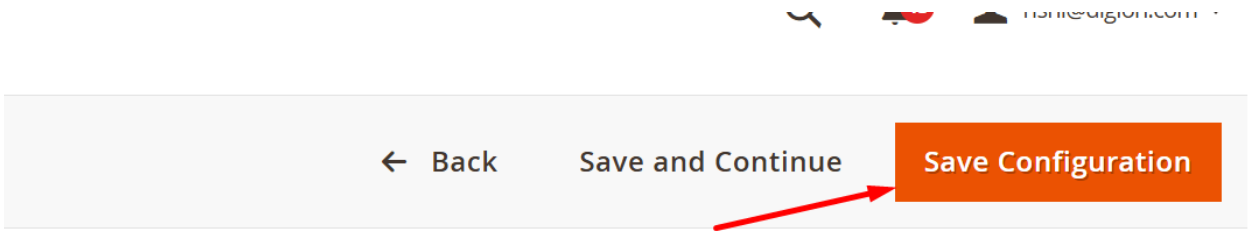

1. On the Configuration page, scroll to the **HTML Head** section.
2. Locate the **Scripts and Style Sheets** field.
3. In a new line, paste your Digioh JS snippet here.
    - To get the snippet:

- Log in to your Digioh account.
- Click your name in the top-right corner and choose **Setup Instructions**.
- Select the **Fast Activation** version of the code and copy it.

Step 4: Save and Clear Cache

1. Click **Save Configuration** at the top right.
2. Navigate to:
   System → Cache Management
3. Click both **Flush Magento Cache** and **Flush Cache Storage**.

Step 5: Verify the Installation

1. Visit your site with `?boxqamode` appended to the URL, for example:
   `https://www.yoursite.com?boxqamode`

2. You should see the Digioh QA overlay which confirms the widget code is firing.

3. If you don't see it:

   - Make sure your browser isn't blocking third-party scripts.

   - Check Dev Tools Console and run `DIGIOH_API` — if undefined, the script isn't loading correctly.

Additional Tips

- Place the JS snippet **inside the** `<head>` section for best performance.
- Use your **staging environment** for initial testing before deploying live.
- If you experience issues with ad blockers, consider a direct embed over GTM.
