

How to Install Digioh on a Magento Site

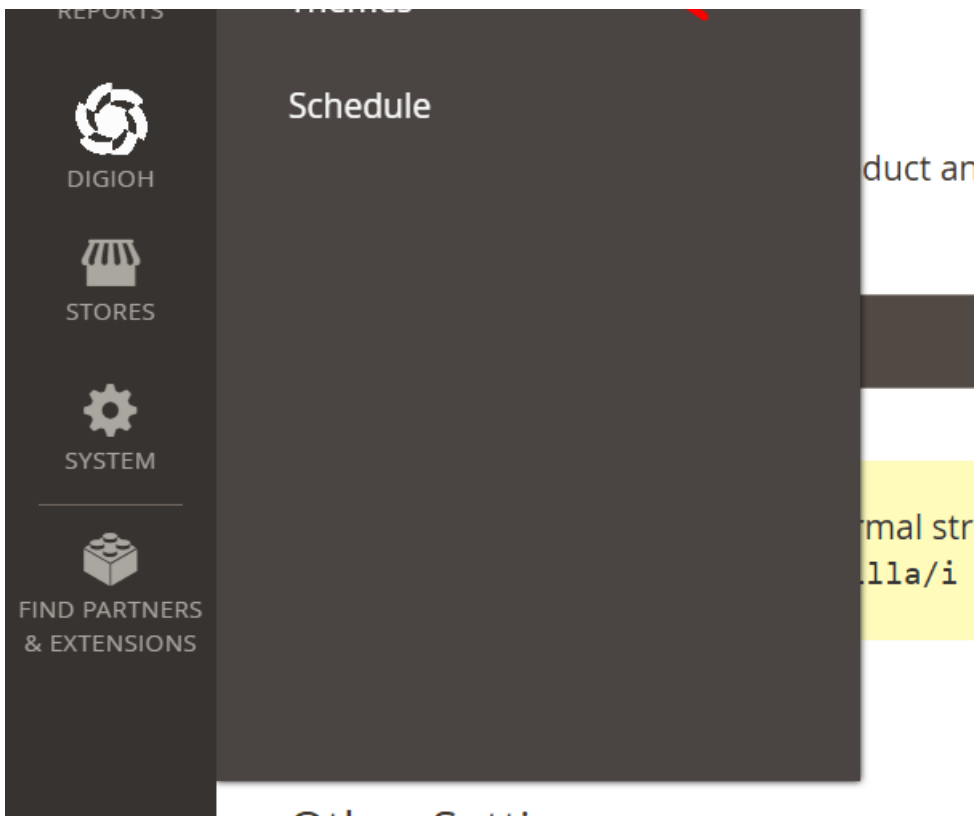

Last Modified on 06/10/2026 11:04 pm EDT

This guide walks you through installing Digioh's JavaScript on your Magento site to enable pop-ups, pop-ups, banners, quizzes, and other on-site widgets.

Step 1: Access the Magento Admin Panel

1. Log into your Magento admin panel.
2. Go to:
Content → **Design** → **Configuration**

Step 2: Choose the Store View

1. Identify the store view you want to update (e.g., your main website).
2. Click **Edit** in the appropriate row.

Design Configuration

3 records found

Default	Website	Store	Store View	Theme Name	Action
Global				-- No Theme --	Edit
Global	Main Website			-- No Theme --	Edit
Global	Main Website	Main Website Store	Default Store View	-- No Theme --	Edit

Step 3: Insert the Digioh JavaScript

1. On the Configuration page, scroll to the **HTML Head** section.
2. Locate the **Scripts and Style Sheets** field.
3. In a new line, paste your Digioh JS snippet here.
 - o To get the snippet:

- Log in to your Digioh account.
- Click your name in the top-right corner and choose **Setup Instructions**.
- Select the **Fast Activation** version of the code and copy it.

Other Settings

HTML Head

Favicon Icon

Maximum file size: 2 MB. Allowed file types: JPG, GIF, PNG, ICO, APNG.
Not all browsers support all these formats!

Default Page Title

Page Title Prefix

Page Title Suffix

Default Meta Description

Default Meta Keywords

Scripts and Style Sheets

This will be included before head closing tag in page HTML.

Display Demo Store Notice

Step 4: Save and Clear Cache

1. Click **Save Configuration** at the top right.
2. Navigate to:
System → Cache Management
3. Click both **Flush Magento Cache** and **Flush Cache Storage**.

[Save Configuration](#)

Step 5: Verify the Installation

1. Visit your site with `?boxqamode` appended to the URL, for example:
`https://www.yoursite.com?boxqamode`
 2. You should see the Digioh QA overlay which confirms the widget code is firing.
 3. If you don't see it:
 - Make sure your browser isn't blocking third-party scripts.
 - Check Dev Tools Console and run `DIGIOH_API` — if undefined, the script isn't loading correctly.
-

Additional Tips

- Place the JS snippet **inside the** `<head>` section for best performance.
 - Use your **staging environment** for initial testing before deploying live.
 - If you experience issues with ad blockers, consider a direct embed over GTM.
-
