How to prevent multiple submissions in a multi-page campaign

Last Modified on 06/24/2026 3:58 pm EDT

Why multiple submissions happen:

In multi-page flows, **any page** with a button set to **'Submit Form'** will create a **submission event**. By default, a submission fires the **campaign-level integration(s)**.

If more than one page submits, you'll see **duplicate submissions** and **multiple integration fires**.

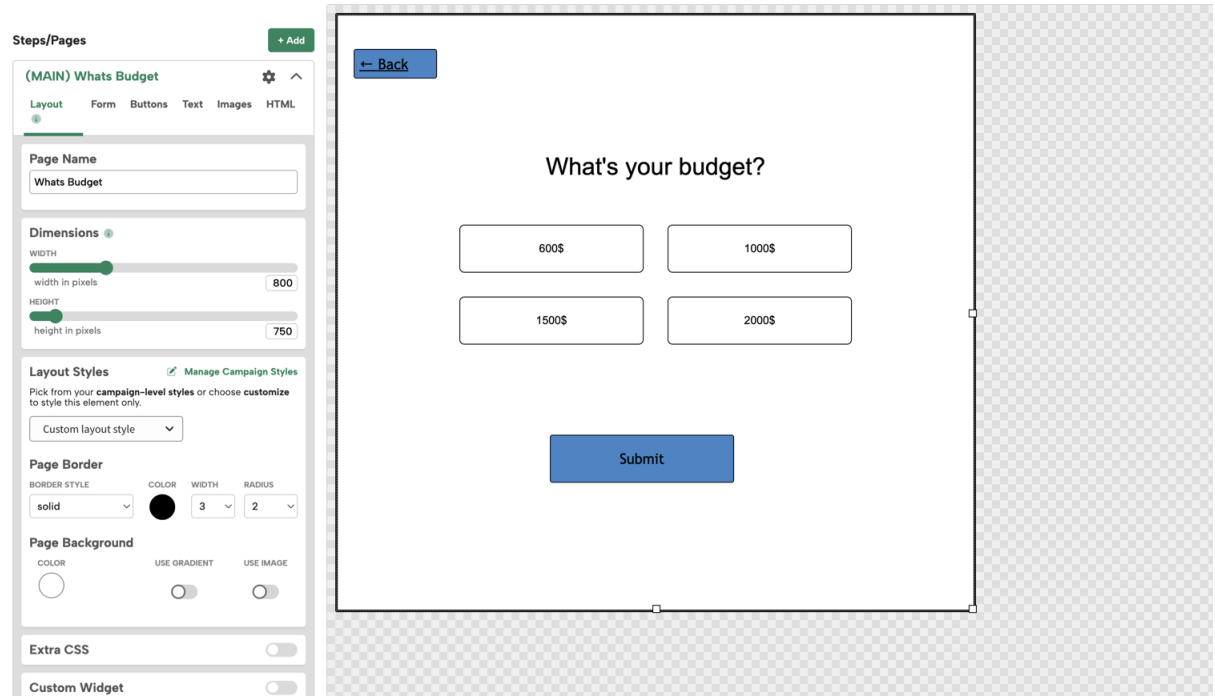

Goal (what we want)

Let visitors progress through pages without sending data until the **final submit page** (often the email capture). At that point, **one** submission occurs and **one** integration run fires.

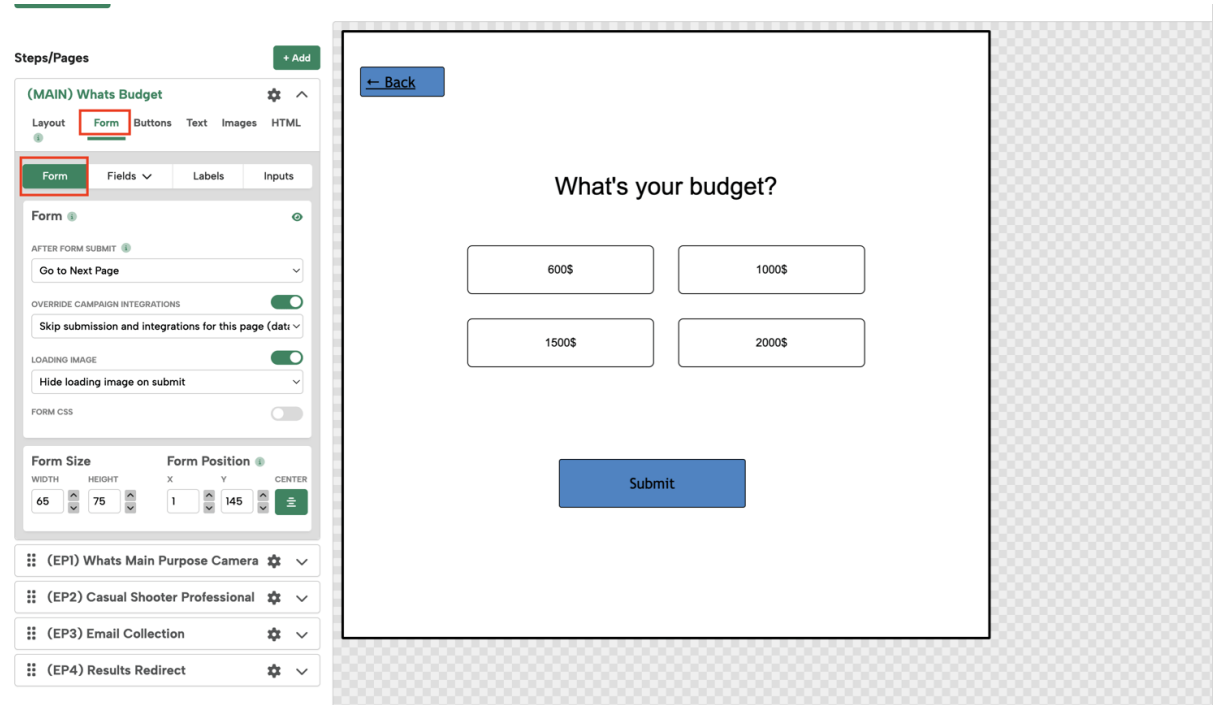

Fix (apply to every non-final page)

For each intermediate page that currently submits:

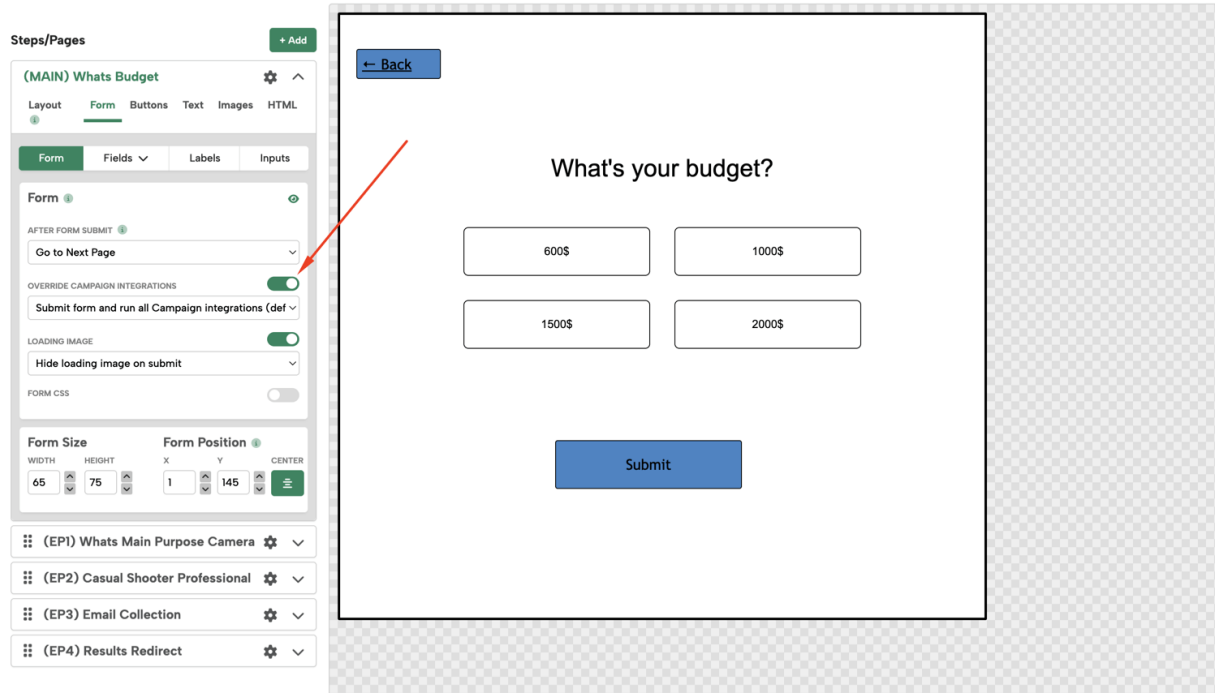

1. Open the campaign in the **Digioh Editor** and navigate to the **page**.

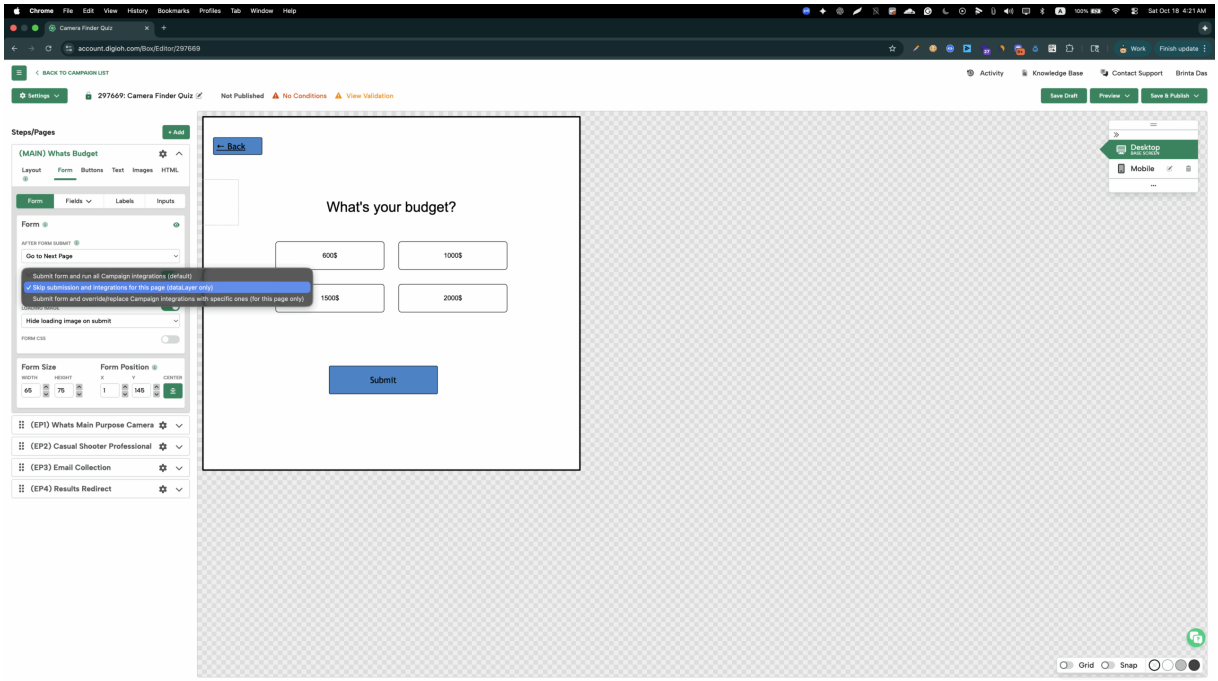

2. Open the page's **After Form Submit** settings By going to the Form section.

3. Toggle **Override Campaign Integrations** to **ON**.

4. From the dropdown, choose **Skip submission and integration for this page** .

5. **Save**.

Result: That page will still advance the visitor to the next page, but it will **not** submit the form and will **not** trigger integrations.

Which page should still submit?

Your **final submission page** (commonly the **email** page) should **not** override integrations. Confirm that this page:

- Has a button action set to **Submit Form**.

- Toggle **Override Campaign Integrations** settings is **OFF.**

This ensures a **single** submission and a **single** integration fire for the entire multi-page flow.
