Available Fields in Digioh Pipelines

Last Modified on 06/25/2026 9:42 am EDT

Below is an example payload sent from a Digioh Campaign to a Digioh Pipeline. These fields can be used for mapping or conditions within your pipeline. To reference a field, use dot (.) notation. like form.custom_4.

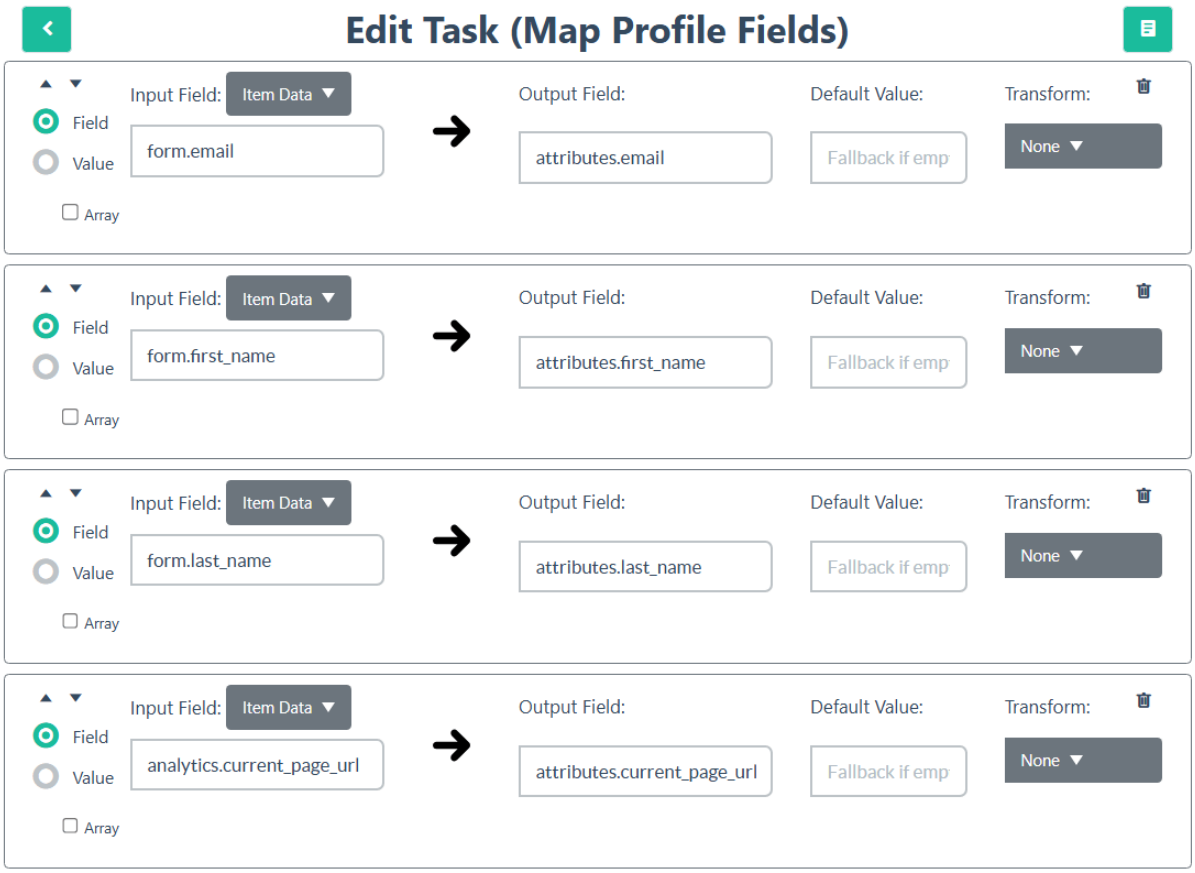

When submitting a form via Digioh Preview, some of the analytics and attributes values are intentionally removed and will not be available for pipelines.

```
{
 "form": {
  "name": "Jane Smith",
  "first_name": "Jane",
  "last_name": "Smith",

```

Below is an example of how to map these fields:

To map analytics data, the path starts with "analytics". See example below:

You can map static values by selecting "Value" from the dropdown on the left. See the example below:
