Using the TapCart Scroll and Link Manager with Digioh Quizzes

Last Modified on 06/25/2026 9:21 am EDT

You may notice that if you are using TapCart to create your mobile app, if a quiz page is too big you won't be able to scroll. Also, when clicking on a product from the result page, it will open an external webview instead of the actual product in the internal view of your app.

You can install the Digioh extension **Scroll and Link Manager for TapCart**.

Make sure to add **is_tapcart** as a metadata key on your campaign with value **true**.

Once configured, scroll will be re added to your tap cart app.

Also, on the result pages, you can add metadata **tapcart_internal** with value **true**, to send this url to TapCart to handle. On TapCart JS, you'll receive a message from the quiz, with the url. You can process it to redirect to the actual internal page using TapCart SDK.
